Preface xiii

How to Look at Stereographic Drawings xiv

## 1 Chemistry and Matter 1

- 1-1 The Study of Chemistry 4
- 1-2 Matter 4
- 1-3 Kinds of Matter 6
- 1-4 The Physical Properties of Substances 11
- 1-5 The Chemical Properties of Substances 12
- 1-6 Energy and Temperature 14
- 1-7 Pressure 17
- 1-8 Solids, Liquids, and Gases 18

## 2 The Atomic and Molecular Structure of Matter 22

- 2-1 Hypotheses, Theories, and Laws 22
- 2-2 The Atomic Theory 23
- 2-3 Modern Methods of Studying Atoms and Molecules 26
- 2-4 The Arrangement of Atoms in a Crystal 26
- 2-5 The Description of a Crystal Structure 29
- 2-6 The Molecular Structure of Matter 34
- 2-7 Evaporation of Crystals. The Nature of a Gas 39
- 2-8 The Nature of a Liquid 41
- 2-9 The Meaning of Temperature 43

### 3 The Electron and the Nuclei of Atoms 47

- 3-1 The Nature of Electricity 48
- 3-2 The Electron 49
- 3-3 The Flow of Electricity in a Metal 50
- 3-4 The Nuclei of Atoms 51
- 3-5 The Proton and the Neutron 51
- 3-6 The Structure of Atomic Nuclei 52
- 3-7 The Experiments That Led to the Discovery of the Electron 53
- 3-8 The Discovery of X-rays and Radioactivity 59
- 3-9 The Discovery of the Nuclei of Atoms 61
- 3-10 The Quantum Theory of Light. The Photon 63
- 3-11 The Wave Character of the Electron 73
- 3-12 What Is Light? What Is an Electron? 75
- 3-13 The Uncertainty Principle 77

### 4 Elements and Compounds. Atomic and Molecular Masses 81

- 4-1 The Chemical Elements 81
- 4-2 Chemical Reactions 85
- 4-3 Nucleidic and Atomic Masses 87
- 4-4 Avogadro's Number. The Mole 88
- 4-5 Examples of Mass-relation Calculations 89
- 4-6 Determination of Atomic Masses by the Chemical Method 91
- 4-7 Determination of Atomic Masses by Use of the Mass Spectrograph 92
- 4-8 Determination of Nucleidic Masses by Nuclear Reactions 94
- 4-9 The Discovery of the Correct Atomic Masses. Isomorphism 95
- 4-10 Avogadro's Law 96
- 4-11 The Perfect-gas Equation 100

### 5 The Chemical Elements, the Periodic Law, and the Electronic Structure of Atoms 108

- 5-1 The Periodic Law 109
- 5-2 The Periodic Table 109
- 5-3 Description of the Periodic Table 113
- 5-4 The Argonons 115
- 5-5 The Electronic Structure of Atoms 120
- 5-6 An Energy-level Diagram 128
- 5-7 The Bohr Theory of the Structure of the Hydrogen Atom 130
- 5-8 Excitation and Ionization Energies 135
- 5-9 Magnetic Moments of Atoms and Molecules 137

### 6 Covalence and Electronic Structure 141

- 6-1 The Nature of Covalence 141
- 6-2 Covalent Molecules 142
- 6-3 The Structure of Covalent Compounds 144
- 6-4 The Direction of Valence Bonds in Space 149

- 6-5 Tetrahedral Bond Orbitals 155
- 6-6 The Description of Molecules by Sigma and Pi Orbitals 160
- 6-7 Bond Orbitals with Large  $p$  Character 162
- 6-8 Resonance 165
- 6-9 Ionic Valence 167
- 6-10 Ionic Radii 170
- 6-11 The Partial Ionic Character of Covalent Bonds 173
- 6-12 The Electronegativity Scale of the Elements 174
- 6-13 The Electroneutrality Principle 180
- 6-14 Transargononic Structures 181
- 6-15 The Sizes of Atoms and Molecules. Covalent Radii and van der Waals Radii 182
- 6-16 Oxidation Numbers of Atoms 185

## 7 The Nonmetallic Elements and Some of Their Compounds 194

- 7-1 The Elementary Substances 194
- 7-2 Hydrides of Nonmetals. Hydrocarbons 205
- 7-3 Aromatic Hydrocarbons. Benzene 215
- 7-4 Hydrazine, Hydrogen Peroxide, and Related Hydrides 219
- 7-5 Ammonia and Its Compounds 221
- 7-6 Other Normal-valence Compounds of the Nonmetals 224
- 7-7 DDT and Other Chlorinated Aromatic Compounds 228
- 7-8 Some Transargononic Single-bonded Compounds 229

## 8 Oxygen Compounds of Nonmetallic Elements 234

- 8-1 Oxycompounds of the Halogens 234
- 8-2 Oxycompounds of Sulfur, Selenium, and Tellurium 244
- 8-3 Oxycompounds of Phosphorus, Arsenic, Antimony, and Bismuth 252
- 8-4 High-energy Molecules and High-energy Bonds 256
- 8-5 Oxycompounds of Nitrogen 261
- 8-6 Oxycompounds of Carbon 266
- 8-7 Transargononic Compounds of the Argonons 271

## 9 Water and Solutions 276

- 9-1 The Composition of Water 276
- 9-2 Methods of Purifying Water 277
- 9-3 The Ionic Dissociation of Water 280
- 9-4 Physical Properties of Water 281
- 9-5 The Melting Points and Boiling Points of Substances 282
- 9-6 The Hydrogen Bond—the Cause of the Unusual Properties of Water 286
- 9-7 The Properties of Solutions 291
- 9-8 The Importance of Water as an Electrolytic Solvent 292
- 9-9 Solubility 297
- 9-10 The Dependence of Solubility on the Nature of Solute and Solvent 299
- 9-11 Solubility of Salts and Hydroxides in Water 301
- 9-12 The Solubility of Gases in Liquids 302
- 9-13 The Freezing Point and Boiling Point of Solutions 303
- 9-14 Colloidal Solutions and Dispersions 308

- 10 Chemical Equilibrium and the Rate of Chemical Reaction 315**
- 10-1 Factors Influencing the Rate of Reaction 315
  - 10-2 The Rate of a First-order Reaction at Constant Temperature 319
  - 10-3 Reactions of Higher Order 325
  - 10-4 Mechanism of Reactions. Dependence of Reaction Rate on Temperature 327
  - 10-5 Catalysis 331
  - 10-6 Chain Reactions 332
  - 10-7 Chemical Equilibrium—a Dynamic Steady State 333
  - 10-8 Le Chatelier's Principle 338
  - 10-9 The Effect of Change of Temperature on Chemical Equilibrium 339
  - 10-10 The Phase Rule—a Method of Classifying All Systems in Equilibrium 341
  - 10-11 The Driving Force of Chemical Reactions 344
- 11 Oxidation-Reduction Reactions. Electrolysis 351**
- 11-1 The Electrolytic Decomposition of Molten Salts 351
  - 11-2 The Electrolysis of an Aqueous Salt Solution 355
  - 11-3 Oxidation-Reduction Reactions 359
  - 11-4 Quantitative Relations in Electrolysis 362
  - 11-5 The Electromotive-force Series of the Elements 365
  - 11-6 Equilibrium Constants for Oxidation-Reduction Couples 369
  - 11-7 Primary Cells and Storage Cells 374
  - 11-8 Electrolytic Production of Elements 376
  - 11-9 The Reduction of Ores. Metallurgy 378
- 12 Acids, Bases, and Buffers 383**
- 12-1 Hydronium-ion (Hydrogen-ion) Concentration 384
  - 12-2 The Equilibrium between Hydrogen Ion and Hydroxide Ion in Aqueous Solution 387
  - 12-3 Indicators 388
  - 12-4 Equivalent Masses of Acids and Bases 391
  - 12-5 Weak Acids and Bases 392
  - 12-6 The Titration of Weak Acids and Bases 396
  - 12-7 Buffered Solutions 400
  - 12-8 The Strengths of the Oxygen Acids 402
  - 12-9 Nonaqueous Amphiprotic Solvents 408
- 13 Organic Chemistry 412**
- 13-1 The Nature and Extent of Organic Chemistry 412
  - 13-2 Petroleum and the Hydrocarbons 414
  - 13-3 Alcohols and Phenols 419
  - 13-4 Aldehydes and Ketones 423
  - 13-5 The Organic Acids and Their Esters 425
  - 13-6 Sugars 430
  - 13-7 Amines and Other Organic Compounds of Nitrogen 434
  - 13-8 Fibers and Plastics 439

## 14 Biochemistry 442

- 14-1 The Nature of Life 443
- 14-2 The Structure of Living Organisms 444
- 14-3 Amino Acids and Proteins 445
- 14-4 Enzymes 457
- 14-5 Polysaccharides 463
- 14-6 Photosynthesis and ATP 464
- 14-7 The Citric Acid Cycle 467
- 14-8 Lipids 470
- 14-9 Vitamins 474
- 14-10 Hormones 483
- 14-11 Chemistry and Medicine 487

## 15 Molecular Biology 495

- 15-1 The Alpha Helix and the Pleated Sheets 495
- 15-2 The Fibrous Proteins 498
- 15-3 The Structure of Muscle and the Mechanism of Muscular Contraction 503
- 15-4 The Structure and Properties of Globular Proteins 506
- 15-5 Antigens and Antibodies. The Molecular Basis of Biological Specificity 514
- 15-6 Nucleic Acids. The Chemistry of Heredity 520
- 15-7 The Structure of Biological Membranes 534
- 15-8 Molecular Diseases 536

## 16 Inorganic Complexes and Coordination Compounds 541

- 16-1 The Nature of Inorganic Complexes 541
- 16-2 The Nature of the Transition Elements 542
- 16-3 Ammonia Complexes 545
- 16-4 Cyanide Complexes 549
- 16-5 Complex Halides and Other Complex Ions 550
- 16-6 Hydroxide Complexes 552
- 16-7 Sulfide Complexes 554
- 16-8 Polydentate Complexing Agents 555
- 16-9 The Structure and Stability of Carbonyls and Other Covalent Complexes of the Transition Metals 557
- 16-10 Polynuclear Complexes 559

## 17 The Nature of Metals and Alloys 563

- 17-1 The Structure of Metals 564
- 17-2 The Metallic State 566
- 17-3 Metallic Valence 570
- 17-4 The Nature of Alloys 572
- 17-5 Experimental Methods of Studying Alloys 579
- 17-6 Physical Metallurgy 582

## 18 Lithium, Beryllium, Boron, and Silicon and Their Congeners 588

- 18-1 The Electronic Structures of Lithium, Beryllium, Boron, and Silicon and Their Congeners 589
- 18-2 Radius Ratio, Ligancy, and the Properties of Substances 590
- 18-3 The Alkali Metals and Their Compounds 595
- 18-4 The Alkaline-earth Metals and Their Compounds 598
- 18-5 Boron 601
- 18-6 The Boranes. Electron-deficient Substances 602
- 18-7 Aluminum and Its Congeners 604
- 18-8 Silicon and Its Simpler Compounds 606
- 18-9 The Silicate Minerals 610
- 18-10 Glass 613
- 18-11 Cement 613
- 18-12 Silicones 614
- 18-13 Germanium 615
- 18-14 Tin 618
- 18-15 Lead 619

## 19 The Transition Metals and Their Compounds 622

- 19-1 The Electronic Structures and Oxidation States of Iron, Cobalt, Nickel, and the Platinum Metals 622
- 19-2 Iron 624
- 19-3 Steel 629
- 19-4 Compounds of Iron 632
- 19-5 Cobalt 634
- 19-6 Nickel 634
- 19-7 The Platinum Metals 635
- 19-8 The Electronic Structures and Oxidation States of Copper, Silver, and Gold 637
- 19-9 The Properties of Copper, Silver, and Gold 638
- 19-10 The Compounds of Copper 640
- 19-11 The Compounds of Silver 641
- 19-12 Ice Nucleation and Rain Making 642
- 19-13 Photochemistry and Photography 643
- 19-14 The Compounds of Gold 650
- 19-15 Color and Mixed Oxidation States 651
- 19-16 The Properties and Uses of Zinc, Cadmium, and Mercury 651
- 19-17 Compounds of Zinc and Cadmium 653
- 19-18 Compounds of Mercury 654
- 19-19 Gallium, Indium, and Thallium 657
- 19-20 The Electronic Structures of Titanium, Vanadium, Chromium, and Manganese and Their Congeners 657
- 19-21 Titanium, Zirconium, Hafnium, and Thorium 658
- 19-22 Vanadium, Niobium, Tantalum, and Protactinium 659
- 19-23 Chromium and Its Congeners 660
- 19-24 Manganese and Its Congeners 664

**20 The Chemistry of Fundamental Particles and Nuclei 670**

- 20-1 The Classification of the Fundamental Particles 671
- 20-2 The Discovery of the Fundamental Particles 674
- 20-3 The Forces between Nucleons. Strong Interactions 678
- 20-4 The Structure of Nucleons 682
- 20-5 Leptons and Antileptons 683
- 20-6 Mesons and Antimesons 686
- 20-7 Baryons and Antibaryons 687
- 20-8 The Decay Reactions of the Fundamental Particles 687
- 20-9 Strangeness (Xenicity) 691
- 20-10 Resonance Particles and Complexes 693
- 20-11 Quarks 695
- 20-12 Positronium, Muonium, Mesonic Atoms 696
- 20-13 Natural Radioactivity 696
- 20-14 The Age of the Earth 702
- 20-15 Artificial Radioactivity 702
- 20-16 The Kinds of Nuclear Reactions 704
- 20-17 The Use of Radioactive Elements as Tracers 706
- 20-18 Dating Objects by Use of Carbon 14 708
- 20-19 The Properties of Nucleides 710
- 20-20 The Shell Model of Nuclear Structure 716
- 20-21 The Helion-Triton Model 717
- 20-22 Nuclear Fission and Nuclear Fusion 720

**Appendixes**

- I Units of Measurement 727
- II Values of Some Physical and Chemical Constants 730
- III The Kinetic Theory of Gases 731
- IV X-rays and Crystal Structure 735
- V Bond Energy and Bond-dissociation Energy 739
- VI Values of the Standard Enthalpy of Formation of Some Substances 742
- VII Selected Readings 749

**Index 751**
