PREFACE

- 1** CHEMISTRY AND CHEMICAL NOMENCLATURE
Chemistry. Elements, Compounds, Solutions, and Phases. Symbols and Formulas. Chemical Reactions and Chemical Equations. Energy, Heat, and Temperature. Scientific Units. Dimensional Analysis. Precision and Accuracy. *Important Concepts. Exercises.*
- 2** STOICHIOMETRY
Atomic Weight. The Mole. Simplest Formulas. Molecular Formulas. Formula Weights. Chemical Equations. Calculations Using Chemical Equations. Stoichiometry Involving Solutions. Oxidation-Reduction. Balancing Oxidation-Reduction Equations. *Important Concepts. Exercises.*
- 3** PERIODICITY IN CHEMICAL BEHAVIOR
Periodic Law. Periodic Table. The Noble Gases. The Halogens. The Alkali Elements. The Second Period. *Important Concepts. Exercises.*
- 4** INTERNAL STRUCTURE OF ATOMS
Experiments on the Electrical Nature of Atoms. Charge and Mass of the Electron. Atomic Spectroscopy. Discovery of the Nucleus. Discovery of the Atomic Number. Isotopes. The Bohr Atom. Buildup of Atoms on Bohr Model. Wave Nature of the Electron. Electron Spin. Quantum Numbers. Many-Electron Atoms. Properties in Relation to Electron Structure. *Important Concepts. Exercises.*
- 5** MOLECULES AND MOLECULAR STRUCTURE
Electrons in Molecules. Ionic Bonds. Covalent Bonds. Polarity of Bonds. Electronegativity. Bond Energies and the Scale of Electronegativity. Saturation of Valence. Resonance. Shapes of Molecules and Hybrid Orbitals. Valence-Shell-Electron-Pair Repulsion. *Important Concepts. Exercises.*

6	THE GASEOUS STATE	168
	Volume. Temperature. Pressure. <i>P-V</i> Relation. <i>V-T</i> Relation. Partial Pressures. Avogadro Principle. Equation of State. Diffusion. Kinetic Theory. Kinetic Theory and Equation of State. Deviations from Ideal Behavior. Critical Temperature. Cooling by Expansion. <i>Important Concepts. Exercises.</i>	
7	LIQUIDS, SOLIDS, AND CHANGES OF STATE	197
	Properties of Liquids. Equilibrium Vapor Pressure. Boiling Points. Properties of Solids. Determination of Solid-State Structure. Space Lattice. Packing of Atoms. Solid-State Defects. Bonding in Solids. Crystal Energies. Heating Curves. Cooling Curves. Supercooling. Solid-Gas Equilibrium. Phase Diagrams. <i>Important Concepts. Exercises.</i>	
8	SOLUTIONS	227
	Types of Solutions. Concentration. Properties of Solutions. Osmotic Pressure. Electrolytes. Percent Dissociation. Interionic Attractions. Solubility. Colloids. <i>Important Concepts. Exercises.</i>	
9	SOLUTION REACTIONS	255
	Acids and Bases. Neutralization. Polyprotic Acids. Equivalents of Acids and Bases. Oxidation-Reduction in Aqueous Solutions. Stoichiometry of Solutions. Hydrolysis. Amphoterism. <i>Important Concepts. Exercises.</i>	
10	CHEMICAL THERMODYNAMICS	274
	Systems and State Functions. First Law. Enthalpy and Heat Capacity. Enthalpy Changes in Chemical Reactions. Entropy. Free Energy. Second Law. Standard Free-Energy Changes. <i>Important Concepts. Exercises.</i>	
11	ELECTROCHEMISTRY	290
	Electric Conductivity. Electrolysis. Electrolysis of Molten NaCl . Electrolysis of Aqueous NaCl . Electrolysis of Aqueous Na_2SO_4 . Quantitative Aspects of Electrolysis. Photoelectrolysis of Water. Galvanic Cells. Fuel Cells. Electrode Potentials. Nernst Equation. Free-Energy Change and Cell Voltage. Balancing Equations by Half-Reactions. <i>Important Concepts. Exercises.</i>	
12	CHEMICAL KINETICS	318
	Nature of Reactants. Concentration of Reactants. Temperature. Catalysis. Collision Theory. Energy Diagrams for Chemical Reactions. Stepwise Reactions. Chain Reactions. Photochemical Smog. Internal Combustion Engine and Control of Air Pollution. <i>Important Concepts. Exercises.</i>	
13	CHEMICAL EQUILIBRIUM	346
	The Equilibrium State. Mass Action. Equilibrium Constant. Equilibrium Calculations. Heterogeneous Equilibrium. Equilibrium Changes. Chemical Equilibrium and Free Energy. Chemical Activities and Chemical Equilibrium. Temperature and Chemical Equilibrium. <i>Important Concepts. Exercises.</i>	

14

HYDROGEN, OXYGEN, AND WATER

Elemental Hydrogen. Preparation of Hydrogen. Properties and Uses of Hydrogen. Compounds of Hydrogen. Hydrogen Bond. Elemental Oxygen. Properties and Uses of Oxygen. Compounds of Oxygen. Water. Water as a Solvent. Hydrates. The Aquatic Environment. *Important Concepts. Exercises.*

15

CHEMICAL EQUILIBRIUM IN AQUEOUS SOLUTIONS

Dissociation Equilibria in Aqueous Solution. Calculations with K_{diss} . Dissociation of Water; pH. Titration and Indicators. Buffer Solutions. Complex-Ion Dissociation in Aqueous Solutions. Aqueous Equilibria Involving Solubility of Ionic Solids. Precipitation from Aqueous Solutions. Simultaneous Equilibria. Hydrolysis. *Important Concepts. Exercises.*

16

A CLOSER LOOK AT ELECTRON DESCRIPTIONS

Electron Waves. Electron Waves in a Box. Electron Waves in an Atom. Atomic Orbitals. Molecular Orbitals. Electron Waves in a Molecule. Molecular Vibrations. Symmetry. *Important Concepts. Exercises.*

17

CHEMISTRY OF SOME TYPICAL METALS

Alkali Elements. Compounds of the Alkali Elements. Alkaline-Earth Elements. Compounds of the Alkaline-Earth Elements. Hard Water. Ion Exchange. Qualitative Analysis for Alkali and Alkaline-Earth Ions. Aluminum. Tin. Lead. *Important Concepts. Exercises.*

18

TRANSITION ELEMENTS: SOME GENERAL ASPECTS

Transition-Element Properties. Electron Configurations. Oxidation States. Complex Ions. Structure and Isomerism. Bonding in Complexes. Crystal-Field Theory. Color. Magnetic Properties. *Important Concepts. Exercises.*

19

TRANSITION ELEMENTS: SOME DETAILED CHEMISTRY

Rare-Earth Elements. Titanium. Vanadium. Chromium. Manganese. Iron. Compounds of Iron. Corrosion of Iron. Cobalt and Nickel. Copper. Silver. Zinc and Cadmium. Mercury. Mercury in the Environment. *Important Concepts. Exercises.*

20

CHEMISTRY OF CARBON

Elemental Carbon. Inorganic Compounds of Carbon. Saturated Hydrocarbons. Unsaturated Hydrocarbons. Aromatic Hydrocarbons. Alcohols and Ethers. Aldehydes and Ketones. Carboxylic Acids. Esters. Amines. Organic Reactions. Carbohydrates. Proteins. Nucleic Acids. *Important Concepts. Exercises.*

21

CHEMISTRY OF SOME NONMETALS OTHER THAN CARBON

Boron. Silicon. Nitrogen. Phosphorus. Sulfur. The Halogens. Fluorine. Chlorine. Bromine. Iodine. *Important Concepts. Exercises.*

THE ATOMIC NUCLEUS

626

Nuclear Stability. Types of Radioactivity. Applications of Radioactivity.
Nuclear Energy. Energy Crisis. *Important Concepts. Exercises.*

APPENDIX

1	SI Units	646
2	Chemical Nomenclature	649
3	Vapor Pressure of Water	654
4	Mathematical Operations	655
5	Definitions from Physics	661
6	Dissociation Constants K_c and Solubility Products K_{sp} at 25°C	666
7	Standard Electrode Potentials at 25°C	667
8	Atomic and Effective Ionic Radii	670
9	References	672
