

Contents

PREFACE xiii

1 INTRODUCTION 1

Energy efficiency • *Human age* • *Detection of polarization*
Hemoglobin

References 6

Suggested Readings 7

2 CONSERVATION OF ENERGY 8

The Mechanism of Energy Conservation 9

Systems and surroundings • *First law of thermodynamics* •
Energy exchanges • *Work* • *Heat* • *Radiation*

Variables of State 23

Equations of state • *Energy and enthalpy changes* •
Heat and work changes •

Temperature and pressure changes for a liquid or solid •

Temperature and pressure changes for a gas •

Properties of $E_2 - E_1$ and $H_2 - H_1$ independent of equation of state

Phase Changes 38

SPONTANEOUS REACTIONS, ENTROPY, AND FREE ENERGY 59

Historical Development of the Second Law: The Carnot Cycle	60
Entropy Is a State Function	63
The Second Law of Thermodynamics: Entropy Is Not Conserved	64
<i>Measurement of entropy</i> • <i>One-way heat shield</i> • <i>Fluctuations</i>	
Chemical Reactions	71
Third Law of Thermodynamics	72
<i>Temperature dependence of entropy</i> •	
<i>Temperature dependence of the entropy changes for a chemical reaction</i> •	
<i>Entropy change for a phase transition</i> • <i>Pressure dependence of entropy</i>	
<i>Spontaneous chemical reactions</i>	
Gibbs Free Energy	77
<i>Spontaneous reactions at constant T and P</i> •	
<i>Calculation of Gibbs free energy</i> •	
<i>Pressure dependence of Gibbs free energy</i> • <i>Phase changes</i>	
Helmholtz Free Energy	84
Some Thermodynamic Data of Noncovalent Reactions	85
Use of Partial Derivatives	90
Summary	93
Equations for Chapter 3	94
Reference	96
Suggested Readings	96
Problems	96

4 THE CONCENTRATION DEPENDENCE OF FREE ENERGY 102

Ideal Gases	103	
<i>Free energy changes</i> • <i>Equilibrium constant</i>		
Solutions	108	
<i>Activity and chemical potential</i> • <i>Standard states</i> •		
<i>Biochemist's standard state</i>		
Standard Free Energy and the Equilibrium Constant	115	
<i>Calculation of equilibrium concentrations: Ideal solutions</i>		
<i>Temperature dependence of the equilibrium constant</i>		
Biochemical Applications of Thermodynamics	126	
<i>Thermodynamics of metabolism</i>		

Phase Equilibria	153
<i>Free energies of transfer between phases</i>	•
<i>Equilibrium dialysis and Scatchard plots</i>	
Surfaces, Membranes, and Surface Tension	159
<i>Surface tension</i>	•
<i>Biological membranes</i>	
Active and Passive Transport	165
Colligative Properties	168
<i>Boiling point and freezing point of a pure component</i>	•
<i>Colligative properties of ideal solutions</i>	
Molecular-weight Determination	176
<i>Vapor-pressure lowering</i>	•
<i>Boiling points and freezing points</i>	•
<i>Osmotic pressure</i>	•
<i>Number-average molecular weights</i>	•
<i>Weight-average molecular weights</i>	
Activity of the Solvent and Colligative Properties	181
<i>Vapor pressure</i>	•
<i>Boiling point</i>	•
<i>Freezing point</i>	•
<i>Osmotic pressure</i>	
Phase Rule	185
Summary	186
Reference	190
Suggested Reading	190
Problems	190

6 TRANSPORT PHENOMENA 196

Kinetic-Molecular Model of Gases	197
<i>Velocities of molecules</i>	•
<i>Molecular collisions</i>	•
<i>Mean free path</i>	
Diffusion	205
<i>Diffusion in a gas</i>	•
<i>Diffusion coefficient and Fick's first law</i>	•
<i>Fick's second law</i>	•
<i>Determination of the diffusion coefficient</i>	•
<i>Relation between the diffusion coefficient and the mean-square displacement</i>	
<i>Determination of the diffusion coefficient by laser light scattering</i>	•
<i>Diffusion coefficient and molecular parameters</i>	•
<i>Solvation</i>	•
<i>Shape factor</i>	•
<i>Diffusion coefficients of random coils</i>	
Sedimentation	219
<i>Determination of the sedimentation coefficient</i>	•
<i>Standard sedimentation coefficient</i>	•
<i>Dependence of s on molecular size and shape</i>	•
<i>Sedimentation-diffusion equilibrium</i>	

References	248
Problems	249

7 KINETICS 253

Rate Law	255
----------	-----

Order of a reaction • *Experimental rate data* • *Zero-order reactions* •
First-order reactions • *Second-order reactions* • *Reactions of other orders*
Determining the order and rate constant of a reaction

Reaction Mechanisms and Rate Laws	276
-----------------------------------	-----

Parallel reactions • *Series reactions (first order)* •
Equilibrium and kinetics • *Complex reactions* •
Deducing a mechanism from kinetic data

Temperature Dependence	290
------------------------	-----

Transition-state theory

Ionic Reactions and Salt Effects	298
----------------------------------	-----

Diffusion-controlled Reactions	300
--------------------------------	-----

Photochemistry and Photobiology	303
---------------------------------	-----

Vision • *Photosynthesis*

Summary	311
---------	-----

Mathematics Needed for Chapter 7	317
----------------------------------	-----

References	318
------------	-----

Suggested Readings	319
--------------------	-----

Problems	319
----------	-----

8 ENZYME KINETICS 327

Kinetics of Enzymatic Reactions	331
---------------------------------	-----

Kinetic data analysis

Relaxation Methods	339
--------------------	-----

Steady state • *Relaxation kinetics*

Mechanisms of Enzymatic Reactions	350
-----------------------------------	-----

Competitive inhibition • *Noncompetitive inhibition*

Summary	354
---------	-----

Mathematics Needed for Chapter 8	356
----------------------------------	-----

References	357
------------	-----

Suggested Readings	358
--------------------	-----

Problems	358
----------	-----

Electron distribution in a hydrogen atom •
Many-electron atoms •
Molecular orbitals and linear combinations of atomic orbitals
Hybridization • *Delocalized orbitals* •
Molecular structure and molecular orbitals •
Hydrogen bonds

Summary	411
Mathematics Needed for Chapter 9	414
References	415
Suggested Readings	416
Problems	416

10 SPECTROSCOPY 421

Absorption and Emission of Radiation	425
<i>Radiation-induced transitions</i> • <i>Classical oscillators</i> • <i>Quantum mechanical description</i> • <i>Beer-Lambert law</i>	
Proteins and Nucleic Acids: Ultraviolet Absorption Spectra	436
<i>Amino acid spectra</i> • <i>Polypeptide spectra</i> • <i>Secondary structure</i> • <i>Origin of spectroscopic changes</i> • <i>Nucleic acids</i> • <i>Rhodopsin: A chromophoric protein</i>	
Fluorescence	445
<i>Excited-state properties</i> • <i>Fluorescence quenching</i> • <i>Excitation transfer</i> • <i>Molecular rulers</i> • <i>Phosphorescence</i>	
Optical Rotatory Dispersion and Circular Dichroism	454
<i>Polarized light</i> • <i>Optical rotation</i> • <i>Circular dichroism</i>	
Circular Dichroism of Nucleic Acids and Proteins	460
<i>Induced circular dichroism of chromophores</i>	
Nuclear Magnetic Resonance	463
<i>Chemical shifts and spin-spin splitting</i>	
Additional Spectroscopic Methods	471
Summary	472
References	474
Suggested Readings	475
Problems	475

	<i>Calculation of some mean values for the random-walk problem</i>	•
	<i>Diffusion</i>	•
	<i>Average dimension of a linear polymer</i>	•
Helix-coil Transitions	508	
	<i>Helix-coil transition in a polypeptide</i>	•
	<i>Helix-coil transition in a double-stranded nucleic acid</i>	
Statistical Thermodynamics	520	
	<i>Statistical mechanical internal energy</i>	•
	<i>Work</i>	•
	<i>Heat</i>	•
	<i>Distributions</i>	•
	<i>Quantum mechanical rules governing a distribution</i>	•
	<i>Most probable distribution</i>	•
	<i>Partition function: The most probable distribution for an isolated system</i>	•
	<i>Entropy and the most probable distribution</i>	•
	<i>Statistical mechanical entropy</i>	•
	<i>Examples of entropy and probability</i>	•
	<i>Partition function: Applications</i>	
Summary	540	
Mathematics Needed for Chapter 11	543	
References	544	
Problems	544	

12 X-RAY DIFFRACTION AND RELATED TOPICS 548

X Rays	549	
	<i>Emission of x rays</i>	•
	<i>Image formation</i>	•
	<i>Scattering of x rays</i>	•
	<i>Laue's equations for the diffraction of x rays by a crystal</i>	•
	<i>Measuring the diffraction pattern</i>	•
	<i>Physical meaning of the indices (h, k, l) in Laue's equations</i>	•
	<i>Bragg's interpretation</i>	•
	<i>Monochromatization of x rays by Bragg reflection</i>	•
	<i>Intensity of diffraction</i>	•
	<i>Unit cell</i>	•
	<i>Summing waves</i>	•
	<i>Summing scattered rays</i>	•
	<i>Phase problem</i>	•
	<i>Symmetry considerations</i>	•
	<i>Scattering of x rays by noncrystalline materials</i>	•
	<i>Absorption of x rays and x-ray filters</i>	•
	<i>Extended fine structure of edge absorption</i>	•
	<i>X rays from synchrotron radiation</i>	
Electron Diffraction	578	
Neutron Diffraction	579	
Electron Microscopy	581	
	<i>Resolution</i>	•
	<i>Contrast</i>	•
	<i>Radiation damage</i>	•
	<i>Transmission and scanning electron microscopes</i>	•
	<i>Image enhancement and reconstruction</i>	

Table A.3. Energy Conversion Factors	597
Table A.4. Miscellaneous Conversions and Abbreviations	597
Table A.5. Inorganic Compounds	598
Table A.6. Hydrocarbons	599
Table A.7. Organic Compounds	600
Table A.8. Atomic Weights of the Elements	602
Table A.9. Biochemical Compounds	603

ANSWERS TO SELECTED PROBLEMS

INDEX	613
