

Contents

Preface ix

- 1 The liquid state of matter 1**
 - ✓ 1.1 What is a liquid? 1
 - ✓ 1.2 An introduction to phase diagrams 3
 - ✓ 1.3 Order in liquids 8
 - ✓ 1.4 Classes of liquids 13

- 2 Intermolecular forces 15**
 - 2.1 General principles 15
 - 2.2 Long-range energies 21
 - 2.3 Short-range energies 29
 - 2.4 Empirical and semi-empirical potentials 32
 - 2.5 Long-range macroscopic attraction 35
 - Appendix 2 37

- 3 Theories and models of the liquid state 40**
 - ✓ 3.1 Introduction 40
 - ✓ 3.2 Physical models 41
 - ✓ 3.3 Statistical thermodynamics 42
 - ✓ 3.4 Distribution functions 48
 - 3.5 Computer simulation 52
 - 3.6 Equations of state 58
 - 3.7 Transport properties 70
 - Appendix 3 74

- 4 Thermodynamic properties of pure liquids 77**
 - ✓ 4.1 Thermodynamics of phase equilibria 77
 - 4.2 The chemical potential of a gas 86
 - 4.3 Single-component phase diagrams 88

- 5 Liquid crystals—the mesophase 92**
 - 5.1 Order in liquid crystals 92
 - 5.2 Molecular structure and the mesophase 97

6.4	The vapour pressure of pure liquids	117
6.5	The effect of solute on the boiling and freezing colligative properties	117
6.6	Thermodynamic measures of non-ideal mixing	121
7	Phase diagrams for multicomponent systems	126
7.1	A general statement of the phase rule	126
7.2	Vapour-liquid equilibrium with two components	128
7.3	Liquid-solid equilibrium with two components	137
7.4	Three-component liquids	141
7.5	Partition coefficients and chromatography	144
8	Polar liquids	152
8.1	Dielectric properties	152
8.2	Water: the unique liquid?	160
8.3	The structure of ice	161
8.4	The water intermolecular potential	164
8.5	Structural models of liquid water	168
8.6	Non-aqueous polar solvents	171
9	Aqueous solutions of electrolytes	180
9.1	The hydration of ions	180
9.2	Ionic transport and hydration numbers	188
9.3	The ionic atmosphere	196
9.4	The activities of ions in solution	200
	Appendix 9	209
10	Chemical equilibria in solution	212
10.1	Principles of chemical equilibria	212
10.2	Equilibrium electrochemistry	216
10.3	Solubility of salts	221
10.4	Acid and base strengths	224
10.5	Equilibria in non-aqueous polar solvents	231
11	Solutions of polymers	234
11.1	Introduction	234
11.2	Polymer molecules	234
11.3	Properties of polymer solutions	236
11.4	Phase behaviour	243
11.5	Statistical and thermodynamic models	244
12	Liquid interfaces and adsorption phenomena	249
12.1	Introduction	249
12.2	Adsorption at interfaces	251

13.2	Formation of dispersions	268	
13.3	Colloid stability	269	
13.4	Association colloids and macromolecules		274
13.5	Aerosols, foams and emulsions	277
