Foreword v

Preface vii

Chapter 1: Introduction and General Principles

Introduction	1
Fundamental Gas Laws	1
Ideal Gases	2
Pressure, Temperature, and Volume	2
Density	3
Concentration	3
✓ Nonideal Gases	6
Atmospheric Pressure	6
High Pressure	6

✓ Chapter 2: Air Purification 9

Removal of Water Vapor	10
Solid Desiccants	10
Anhydrous Magnesium Perchlorate	15
Calcium Sulfate	15
Silica Gel	15
Activated Alumina	16
Liquid Desiccants	16
Cooling	17
Removal of Particulates	18
Removal of Organic Vapors	19
Removal of Miscellaneous Contaminants	19

Aspirator Devices	21
Intermediate Standards	30
Wet Test Meters	31
Dry Gas Meters	33
Secondary Standards	35
Volumetric Flowmeters	35
Rotameters	35
Orifice Meters	43
Critical Orifices	45
Porous Plugs	49
Controlled Leaks and Restrictors	51
Velocity Meters	52
Thermal Transfer Methods	53
Mechanical Methods	56
Electromechanical Methods	56
Miscellaneous Devices	57

Chapter 4: Static Systems for Producing Gas Mixtures 59

Systems at Atmospheric Pressure	59
Single Rigid Chambers	59
Sample Introduction	61
Gas Blenders	64
Miscellaneous Volume Dispensers	64
Mixing Devices	66
Concentration Calculations	66
Volume-Dilution Calculations	69
Discussion	72
Rigid Chambers in Series	73
Nonrigid Chambers	76
Sample Introduction	79
Sample Decay	79
Pressurized Systems	81
Volumetric Methods	83
Manometric or Partial-Pressure Methods	84
Gravimetric Methods	89
Partially Evacuated Systems	91

Liquid Reservoirs	104	
Drive Motors	107	
Injection Ports, Mixers, and Evaporators		110
Vaporization Techniques	113	
A Typical System	115	
Calculations	118	
Miscellaneous Injection Methods		122
Electrolytic Methods	122	
Gravity Feed Methods	123	
Liquid and Gas Pistons	124	
Pulse Diluters	125	
Pumps	126	
Diffusion Methods	126	
Permeation Tubes	134	
Evaporation Methods	141	
Electrolytic Methods	148	
Chemical Methods	154	

Chapter 6: Specialized Systems

Ozone	161	
Methods of Generation	161	
Methods of Analysis	164	
Nitrogen Dioxide	166	
Static Systems	167	
Dynamic Systems	170	
Methods of Analysis	171	
Mercury	171	
Hydrogen Cyanide	175	
Static Systems	175	
Dynamic Systems	177	
Halogen Compounds	178	
Humidity Control	182	
Static and Dynamic Methods		184
Calculations	187	
Methods of Measurement		

Appendix D: Density of Dry Air	205
Appendix E: Densities of Common Gases and Their Deviation from the Perfect Gas Law	206
Appendix F: Diffusion Coefficients at 25°C and 760 mm Hg in Air	212
Appendix G: Constants for Vapor-Pressure Calculations	
Appendix H: Vapor Pressures of Water at Various Temperatures	220
Appendix I: Mass of Water Vapor in Saturated Air	221
Appendix J: Relative Humidity from Wet- and Dry-Bulb Thermometer Readings	223
Appendix K: Definition of Symbols	227
References	229
Index	243
