PREFACE TO THE FOURTH EDITION	v
PREFACE TO THE FIRST EDITION	vii

PART I LABORATORY EXPERIMENTS

CHAPTER 1

GASES	3
1. Gas Density 2. Vapor Density	

CHAPTER 2

OPTICO-CHEMICAL METHODS	14
3. Refractometry 4. Photoelectric Colorimetry 5. Spectrophotometry 6. Polarimetry	

CHAPTER 3

THERMOCHEMISTRY	38
7. Heat of Combustion 8. Heat of Ionic Reactions 9. Heat of Solution	

CHAPTER 4

LIQUIDS	55
10. Vapor Pressure 11. Surface Tension 12. Viscometry	

CHAPTER 5

SOLUTIONS	75
13. Elevation of the Boiling Point 14. Depression of the Freezing Point 15. Liquid-Vapor Equilibria in Binary Systems 16. Fractional Distillation 17. Partial Molal Properties of Solutions 18. Steam Distillation	

CHAPTER 6

HOMOGENEOUS EQUILIBRIA	107
19. Equilibrium in Organic Liquids 20. Dissociation of Nitrogen Tetroxide	

CHAPTER 7

HETEROGENEOUS EQUILIBRIA	113
21. Distribution of a Solute between Immiscible Solvents 22. Three- component Systems 23. Freezing-point Diagrams 24. Solubility as a Function of Temperature 25. Partial Miscibility 26. Transition Tem- perature	

CHAPTER 8

- CHEMICAL KINETICS
27. Hydrolysis of Methyl Acetate 28. Saponification of Ethyl Acetate
 29. Decomposition of Silver Oxide. An Autocatalytic Reaction 30.
 Hydrolysis of Acetal 31. Inversion of Sucrose 32. Clock Reactions
 33. Decomposition of Nitrogen Pentoxide in Solution

CHAPTER 9

- ✓ ELECTRIC CONDUCTANCE
34. Conductance Behavior of Weak and Strong Electrolytes 35. Ap-
 plications of Conductance Measurements

CHAPTER 10

- ELECTRODE PHENOMENA.
- ✓ 36. Transference Number of the Silver Ion by the Hittorf Method 37.
 Transference Number of the Hydrogen Ion by the Moving Boundary
 Method 38. The Dropping-mercury Electrode

CHAPTER 11

- ELECTROMOTIVE FORCE
39. Single-electrode Potentials 40. Measurement of Hydrogen-ion
 Activity 41. The Glass Electrode 42. Free Energy and the Equilib-
 rium Constant 43. Thermodynamics of Electrochemical Cells 44.
 ✓ Potentiometric Titrations

CHAPTER 12

- DIELECTRIC CONSTANT
45. Dielectric Constant and Dipole Moment. Capacitance Determina-
 tions by the Resonance Method 46. Dielectric Constant and Dipole
 Moment. Capacitance Determinations by the Heterodyne-beat Method

CHAPTER 13

- COLLOIDS
47. Viscosity of High-polymer Solutions 48. Adsorption from Solution
 49. Adsorption of Gases 50. Sedimentation Rate and Particle-size
 Distribution 51. Chromatography 52. Titration of a Typical Protein
 53. Electrophoresis of Hemoglobin 54. Unimolecular Films

CHAPTER 14

- PHOTOCHEMISTRY.
55. Photolysis of Uranyl Oxalate 56. Photohydrolysis of Monochloro-
 acetic Acid 57. Photobromination of Cinnamic Acid 58. Photography
 59. Spectrometry and Spectrography 60. Raman Spectrum

CHAPTER 15

- RADIOACTIVE ISOTOPES AND TRACERS.
61. The Geiger-Müller Counter 62. Determination of the Half-life
 of a Radioisotope, Using a Quartz Fiber Electrode 63. Exchange
 Reactions with Radioactive Bromine 64. Exchange Reactions with
 Deuterium

PART II

APPARATUS AND METHODS

CHAPTER 16

TREATMENT OF EXPERIMENTAL DATA.	345
Units and Dimensions.	345
Length, mass, and time—Dimensions of thermal quantities—Electrical and magnetic dimensions—Physical standards—Applications of dimensional reasoning.	
Errors of Measurement	351
Systematic errors—Random errors—The most probable value and its reliability—Rejection of experimental values—Influence of errors of observation on the final result.	
Significant Figures	360
Representation of Data.	360
Tabular representation—Representation of data by graphs—Representation of data by equations.	

CHAPTER 17

PHYSICAL PROPERTIES OF GASES	372
Measurement of Volume	372
Displacement method—Flowmeters.	
Manometers.	
McLeod gauge—Other low-pressure gauges—Manostats.	
Vacuum Pumps	379
Diffusion pumps—Vacuum technique.	

CHAPTER 18

OPTICOCHEMICAL MEASUREMENTS.	383
Spectroscopy.	383
Spectrometer—Spectroscopes and spectrographs—Spectrophotometer	
Colorimetry.	386
Nephelometry	386
Refractometry.	388
Microscopy	389
The electron microscope—The ultramicroscope.	
Optical Systems for Study of Moving and Diffusing Boundaries	394

CHAPTER 19

THERMAL MEASUREMENTS.	396
Thermometry	396
The international temperature scale—Mercury thermometers—Bimetallic thermometers—Gas thermometers—Resistance thermometers—Thermocouples—Optical pyrometers.	

Calorimetry	
Adiabatic calorimeter—Isothermal calorimeter—Heat of combustion—	
Heat of reaction—Heat of vaporization—Heat capacity and heat of fusion.	

CHAPTER 20

PHYSICAL PROPERTIES OF LIQUIDS AND SOLUTIONS	
Determination of the Boiling Point.	
Superheating—Ebullimeters.	
Measurement of Vapor Pressure	
Dynamic method—Static method—Gas-saturation method—Isopiestic	
method.	
Fractional Distillation	
Density	
Pycnometers—Buoyancy methods.	
Viscometry	
Surface Tension	
Diffusion	
Free diffusion—Restricted diffusion—Steady-state diffusion.	
Osmotic Pressure.	

CHAPTER 21

ELECTRICAL MEASUREMENTS.	
Electrical Circuits	
Galvanometers.	
Measurement of Electromotive Force.	
Potentiometers—Standard cells—Standard electrodes—Determination	
of the standard electrode potential.	
Measurement of Electrolytic Conductance.	
Alternating-current Wheatstone bridge—Conductivity cells—Conduc-	
tance of potassium chloride solutions—Conductance water.	
Measurement of Current and Quantity of Electricity	
Measurement of Electrical Energy	
Measurement of Transference Numbers and Ionic Mobilities.	
Electrophoresis of proteins.	
Measurement of Capacitance	

CHAPTER 22

ELECTRONICS	
Thermionic Emission and the space charge.	
Electron Tubes.	
Diode and rectification—Triode and amplification—Pentode.	
Power Supplies.	
Full-wave rectifier—Dry-disc rectifiers—Alternating-current voltage	
regulators—Constant current supply.	
Miscellaneous Electronic Circuits.	
Vacuum-tube relay—Vacuum-tube voltmeter—Phase of alternating	

voltages—Feedback—Vacuum-tube oscillator—Eccles-Jordan trigger circuit—Pulse-counting or scaling circuit—Cathode-ray oscilloscope.	
Safety Precautions	499

CHAPTER 23

PHOTOCHEMISTRY	501
Sources of Light	501
Tungsten filament—Mercury arc—Other arcs.	
Optical Filters	504
Glass filters—Christiansen filter—Solutions.	
Monochromators	508
Thermopiles	509
Construction—Calibration.	
Bolometers	512
Photoelectric Cells	512
Reaction Cells	514
Photography	516

CHAPTER 24

ISOTOPES AND RADIOACTIVITY	519
Ionization Chambers	519
Geiger-Müller Counters	521
Counting of Alpha Particles	522
Other Counters	524
Crystal counters—Fluorescence counters—Neutron counters—Radioautographs.	
Mass Spectrometry	526
Availability of Isotopes	527

CHAPTER 25

THE CONSTRUCTION OF LABORATORY APPARATUS	530
Thermostats—Glass blowing—Construction of small glass apparatus—Protection of thermometers—Use of plastic tubing—Calorimeter heaters.	

CHAPTER 26

PURIFICATION OF MATERIALS	550
Methods—Water—Mercury—Alcohol—Benzene—Hydrocarbons—Sodium chloride—Sodium hydroxide.	

APPENDIX

PHYSICAL CONSTANTS	555
REDUCTION OF BAROMETER READINGS ON A BRASS SCALE TO 0°	556
VAPOR PRESSURE OF WATER	556
DENSITY OF WATER (g/ml)	557
METHODS OF EXPRESSING CONCENTRATIONS	557
COLOR CODE CONVENTIONS FOR ELECTRONIC CIRCUIT COMPONENTS	558
INDEX	561
1948 ATOMIC WEIGHTS	front cover
LOGARITHM TABLE	back cover
