

CONTENTS

I. Introduction	1
II. History and Background	3
Basic Concepts and Terminology	6
a) Symmetry Elements	6
b) Enantiomerism and Diastereoisomerism	7
c) Projection Formulas. Stereochemical Nomenclature	11
d) Number of Stereoisomers. Meso Forms. Pseudoasymmetric Atoms	14
e) Racemic Modifications. Resolution	16
f) Enantiotopic and Diastereotopic Groups	20
g) Configuration	22
h) Conformation. Conformational Analysis	23
III. Stereochemistry of Carbon Compounds	27
a) Saturated Compounds	27
b) Olefins	28
c) Allenes, Cumulenes	30
d) Acetylenes	31
e) Cycloalkanes. Strain	32
f) Alkylidenecycloalkanes. Spiranes	36
g) Biphenyls	36
h) Configuration and Conformation	39
i) Planar Chirality. Ansa Compounds. Cyclophanes	41
j) Helicity. 4,5-Disubstituted Phenanthrenes	42
k) Catenanes	43
Stereochemistry of Other Tetrahedral Elements	44
a) Quadriligant Compounds	44
b) Triligant Compounds	45
c) Triligant Derivatives of Carbon	46
Stereochemistry of the Remaining Elements	47
a) Four-Coordinated Metal Complexes	47
b) Six-Coordinated Metal Complexes	51
c) Metal Complexes with Coordination Numbers Other than Four or Six	59
Dynamic Stereochemistry	59
Stereoregular Polymerization	67
General References	70
