

## CONTENTS

Preface	ix
1. Research in the stereochemistry of cobalt complexes	1
2. Absolute configuration of transition metal complexes	13
3. Circular dichroic intensities in the vibronic transitions of chiral metal complexes	43
4. Stereochemical correlations in the circular dichroism of <i>d-d</i> and charge-transfer transitions: applications to tris(bidentate) complexes	73
5. Circular dichroism spectra of square planer complexes containing prochiral olefins and their stereoselective olefin exchange	91
6. Chirality induction in coordination complexes	115
7. Stereochemistry of microbial iron transport compounds	133
8. Rational approaches to saymmetric hydrogenation	169
9. Circular dichroism as a probe of metal ion interaction with azoproteins	195
10. Preparation and circular dichroism spectra of cobalt(III) complexes containing chiral aminophosphine chelate ligands	207
11. Effect of solvent on the circular dichroism of metal complexes	221
12. The nature of the equilibrium displacement mechanism for the pfeiffer effect in inorganic chemistry	239
13. Phenyl substituent contributions in circular dichroism spectra of cobalt (III) complexes of ethylenediamine- <i>N,N'</i> -diacetate ion	255
14. Additivity of circular dichroism of <i>d-d</i> transitions: the vicinal effect in a homologous series of triethylenetetraaminecobalt (III) amino acid complexes	273
15. Circular dichroism spectra of cobalt (III) complexes having optical activity owing to the arrangement of unidentate ligands	289
16. Optical resolution of facial and meridional tris (aminoacidato)-cobalt (III) chelates by <i>d</i> -tartrate and by antimony <i>d</i> -tartrate	315
17. Stereoselective synthesis of quadridentate ligands utilizing a template reaction of metal complexes	325
18. Stereochemistry of cobalt (III) $\beta$ -ketoaminates and some mixed-ligand analogues	337
19. Absolute configurations from solution reactions: the tris(diimine)iron(II)/cyanide inversion reaction	357
20. Photoacoustic detection of natural circular dichroism in crystalline transition metal complexes	375
21. Stereochemical description and notation for coordination systems	397
Index	421
