CONTENTS

Chapter 1. **Introduction**
(a) The Concept of a Ligand Field
(b) The Scope of Ligand Field Theory 3
(c) The *d* and Other Orbitals 5
(d) Qualitative Demonstration of the Ligand Field Effect 15
(e) The Physical Properties Affected by Ligand Fields 19
(f) The Ionic Model of Coordination Compounds 22
(g) Crystal Fields and Ligand Fields 24

Chapter 2. **Quantitative Basis of Crystal Fields**
(a) Crystal Field Theory 27
(b) The Octahedral Crystal Field Potential, V_{oct} 29
(c) The Effect of V_{oct} on the *d* Wave Functions 33
(d) The Evaluation of 10Dq 38
(e) The Tetrahedral Potential, V_{tet} 39

Chapter 3. **Atomic Spectroscopy**
(a) The Free Ion 42
(b) Free Ion Terms 44
(c) Term Wave Functions 52
(d) Spin–Orbit Coupling 56

Chapter 4. **Free Ions in Weak Crystal Fields**
(a) The Effect of a Cubic Crystal Field on S and P Terms 62
(b) The Effect of a Cubic Crystal Field on D Terms 66
(c) The Effect of a Cubic Crystal Field on F Terms 67
(d) The Effect of a Cubic Crystal Field on G, H and I Terms 71

Chapter 5. **Thermodynamic Aspects of Crystal Fields**
(a) Crystal Field Stabilization Energies (c.f.s.e.) 74
(b) Lattice Energies and c.f.s.e. 77
(c) Heats of Ligation and c.f.s.e. 87
(d) Standard Electrode Potentials and c.f.s.e. 98

(e) Interionic Separations and c.f.s.e. · 100
(f) Cation Distribution in Lattices and c.f.s.e. 102
(g) Chemical Stability and c.f.s.e. · · 105

Chapter 6. **Group Theory**
(a) The Concept of a Group · · · · · · · · 107
(b) Group Multiplication Tables · · · · · · · 111
(c) Representations · · · · · · · · · · · 114
(d) Characters and Character Tables · · · · · · · 122
(e) The Principal Groups of Coordination Chemistry, O_h, T_d, etc. 124
(f) The Relationship between Representations and Wave Functions 129
(g) The Direct Product · · · · · · · · · · 137
(h) Directed Valence · · · · · · · · · · 140

Chapter 7. **Free Ions in Medium and Strong Crystal Fields**
(a) Strong Field Configurations · · · · · 145
(b) Transition from Weak to Strong Crystal Fields · 149
(c) Term Energy Level Diagrams · · · · · 152
(d) Tanabe-Sugano Diagrams · · · · · · 161

Chapter 8. **Molecular Orbital Theory for Complex Ions**
(a) Elementary Molecular Orbital Theory · · · · 172
(b) Bonding in Octahedral Complexes · · · · 184
(c) Bonding in Tetrahedral Complexes · · · · 196
(d) Quantitative Calculations of 10Dq · · · · 200

Chapter 9. **Electronic Spectra of Complex Ions**
(a) Selection Rules and Band Widths · · · · 203
(b) Spectra of Aqueous Solutions of $M(H_2O)_6^{n+}$ · 217
(c) Spectra of Spin-Free ML_6^{n+} · · · · 228
(d) Spectra of Spin-Paired ML_6^{n+} · · · · 230
(e) Spectra of Distorted Octahedral Complexes · 234
(f) Spectra of Tetrahedral Complexes · · 237
(g) The Spectrochemical and Nephelauxetic Series 242
(h) Charge Transfer Spectra · · · · · 245

Chapter 10. **The Magnetic Properties of Complex Ions**
(a) The Theory of Magnetic Susceptibility · · · · · 248
(b) The Magnetic Properties of Free Ions · · · · · 256
(c) Quenching of Orbital Angular Momentum by Ligand Fields 261
(d) The Magnetic Properties of A and E Terms · · · · 263

(e) The Magnetic Properties of T Terms 267
(f) $t_{2(g)}$ Electron Delocalization 275
(g) The Magnetic Properties of Complexes with A and E Ground Terms 278
(h) The Magnetic Properties of Complexes with T Ground Terms . 285
(i) Summary 289
(j) Spin-Free–Spin-Paired Equilibria 290

Chapter 11. **Electron Spin Resonance in Complex Ions**
(a) Electron Spin Resonance (e.s.r.) 293
(b) The Spin-Hamiltonian 300
(c) The e.s.r. Spectra of Transition Metal Complex Compounds . 303
(d) Hyperfine Structure 309

Chapter 12. **Complexes of Non-Cubic Stereochemistry**
(a) General 311
(b) Square Planar Complexes 312
(c) Square Pyramidal Complexes 320
(d) Dodecahedral Complexes 322

Chapter 13. **The Actinide Element Compounds**
(a) Ligand Fields and *f* Electron Systems 324
(b) The Magnetic Properties of Actinide Element Compounds . 329

Appendices I–VIII . . . 334

List of Symbols . . . 340

Useful Constants and Relationships 346

Index 347
