

# Contents

<b>Foreword</b>	v
<b>Preface</b>	ix
1 Introduction	1
2 Quantum Numbers	7
3 The Periodic Table	20
4 Types of Chemical Bond	32
5 The Formation of Ionic Bonds	38
6 Characteristics of Ionic Compounds	51
7 The Wave Nature of the Electron	67
8 Molecular Orbitals	81
9 Simple Examples of Covalent Bonding	91
10 Directional Nature of Covalent Bonds	100
11 Resonance and Electronegativity	117
12 Characteristics of Covalent Compounds	130
13 Hydrogen Bonding	141
14 van der Waals' Forces	154
15 Complex or Co-ordination Compounds	162
16 Crystal Field Theory	180
17 Some Applications of Crystal Field Theory	190
18 Ligand Field Theory	198
19 Bonding in Metals	209
<b>Appendix: Radii and Energy Levels of Stationary States in the Hydrogen Atom</b>	228
<b>Formula Index</b>	231
<b>Subject Index</b>	234
<b>Front end papers: Periodic Table</b>	
<b>Back end papers: The Arrangement of Electrons in the Atoms of the Elements in their Normal States</b>
