

HISTORICAL INTRODUCTION	1
1.1 Electricity and chemical bonding	1
1.2 The Lewis–Langmuir electron-pair bond	3
1.3 Quantum theory of chemical bonding	6
1.4 Bibliography	7
THE EXPERIMENTAL FOUNDATION OF THE QUANTUM THEORY	8
2.1 Energy units	8
2.2 Black body radiation	9
2.3 The photoelectric effect	11
2.4 The Bohr theory of the hydrogen atom	13
2.5 Energy level diagrams	15
2.6 Extensions of the Bohr theory	17
ELEMENTARY QUANTUM THEORY	18
3.1 Particles and waves	18
3.2 The new quantum theory and the ‘uncertainty principle’	19
3.3 Waves and wave equations	21
3.4 The wave equation for electrons	25
3.5 Operator form of the Schrödinger equation	27
THE HYDROGEN ATOM	29
4.1 Introduction	29
4.2 Polar co-ordinates	29
4.3 Acceptable solutions – the quantum numbers	30
4.4 The radial functions $R(r)$	31
4.5 Radial distribution functions	32
4.6 The angular functions $Y(\theta, \phi)$	34
4.7 Orbitals, probability distributions and charge clouds	35
4.8 Energy levels	37
QUANTUM THEORY AND THE PERIODIC CLASSIFICATION	38
5.1 The wave equation for many-electron atoms	38
5.2 Energy levels	38
5.3 Electron spin	39
5.4 The exclusion principle	40
5.5 Ionization energies	42
5.6 The ‘building-up’ (‘Aufbau’) principle and the periodic classification	43
5.7 Transition series: the ‘d-block’ elements	46

- 6 **THE MOLECULAR-ORBITAL METHOD**
 - 6.1 Introduction
 - 6.2 Relationship between atomic and molecular orbitals (united atom approach)
 - 6.3 The LCAO method
 - 6.4 Hydrogen molecule ion (H_2^+)
 - 6.5 Homonuclear diatomic molecules
 - 6.6 Heteronuclear diatomic molecules
 - 6.7 Bond strength
 - 6.8 Reference

- 7 **THE VALENCE-BOND METHOD**
 - 7.1 Introduction
 - 7.2 The hydrogen molecule ion
 - 7.3 The hydrogen molecule
 - 7.4 Comparison of the molecular-orbital and valence-bond methods
 - 7.5 Heteronuclear diatomic molecules
 - 7.6 Resonance
 - 7.7 Resonance: some misconceptions and some guiding principles

- 8 **DIRECTED VALENCY**
 - 8.1 Shapes of molecules formed by first-row elements
 - 8.2 The criterion of maximum overlapping
 - 8.3 Polyatomic molecules: VB and MO descriptions
 - 8.4 Non-equivalent orbitals
 - 8.5 π Molecular orbitals
 - 8.6 The equivalent-orbital description
 - 8.7 Bond energies

- 9 **IONIC, HYDROGEN AND METALLIC BONDS**
 - 9.1 Introduction
 - 9.2 Ionic bonds
 - 9.3 Crystal lattice energy
 - 9.4 The Born-Haber cycle
 - 9.5 Ionic radii
 - 9.6 Ionic structures
 - 9.7 Electronegativity
 - 9.8 The hydrogen bond
 - 9.9 Metallic bonds
 - 9.10 The molecular or van der Waals' bond
 - 9.11 Bibliography

- 10 **THE STRUCTURES OF SOME SIMPLE INORGANIC COMPOUNDS**
 - 10.1 Bond lengths
 - 10.2 Calculated bond lengths

10.3	Stereochemistry of compounds formed by main-group elements	132
10.4	Lithium and the alkali metals	133
10.5	Beryllium and the alkaline earth metals	135
10.6	Boron and the Group IIIB elements	138
10.7	Carbon and the Group IVB elements	143
10.8	Nitrogen and the Group VB elements	151
10.9	Oxygen and the Group VIB elements	167
10.10	Fluorine and the Group VIIB elements	179
10.11	Compounds of the noble gases	191
10.12	Bonding in xenon compounds	194
10.13	References	196

COMPLEX COMPOUNDS

11.1	Introduction and nomenclature	198
11.2	Bonding in complex compounds	203
11.3	Absorption spectra	212
11.4	Magnetic susceptibility	215
11.5	The stability of complex compounds	221
11.6	Distortion of octahedral complexes	224
11.7	Co-ordination numbers other than 6	227
11.8	Co-ordination number 2	228
11.9	Co-ordination number 3	231
11.10	Co-ordination number 4	234
11.11	Co-ordination number 5	242
11.12	Co-ordination number 7	254
11.13	Co-ordination number 8	256
11.14	Co-ordination numbers 9, 10 and 12	261
11.15	Metal-metal bonding: cluster compounds	262
11.16	Carbonyls	266
11.17	Cyclopentadiene complexes	270
11.18	Alkene and alkyne complexes	274
11.19	Reactivity of complex compounds: orbital considerations	277
11.20	The stability and reactivity of four-co-ordinate complexes: the 'trans' influence and 'trans' effect	282
11.21	References	286

ELECTRONIC SPECTRA OF TRANSITION-METAL COMPLEXES

12.1	Introduction	291
12.2	Electronic spectra of d^1 ions	291
12.3	Intensity of $d-d$ bands	294
12.4	Configurations for free ions (d^n)	295
12.5	Coupling of electron spins	296
12.6	Coupling of orbital angular momenta	297
12.7	Spin multiplicity ($2S + 1$)	298
12.8	Relationship between terms and microstates for the d^2 configuration	299

- 12.9 Microstates and terms for a d^2 configuration
- 12.10 Terms for d^n configurations
- 12.11 Coupling of spin and orbital momenta
- 12.12 Free ions: term energies
- 12.13 Spectra of complex ions
- 12.14 Weak-field method
- 12.15 Spectra of octahedral d^2 complexes (e.g. $[\text{V}_6]^{3+}$)
the weak-field approach
- 12.16 Orgel diagrams
- 12.17 Strong-field method (for octahedral fields)
- 12.18 Correlation of weak-field and strong-field levels
- 12.19 Other Tanabe–Sugano diagrams
- 12.20 References

13 ELECTRON-DEFICIENT MOLECULES

- 13.1 Introduction
- 13.2 The structure and bonding of diborane
- 13.3 The structures of the higher hydrides of boron
- 13.4 The structures of the borohydrides (tetrahydroborates)
- 13.5 The metal alkyls
- 13.6 References
