Principles

1. *Introduction*
2. *Definitions and Theorems of Group Theory* 4
 - 2.1 The Defining Properties of a Group, 4
 - 2.2 Some Examples of Groups, 6
 - 2.3 Subgroups, 10
 - 2.4 Classes, 11
 - Exercises, 13
3. *Molecular Symmetry and the Symmetry Groups* 14
 - 3.1 General Remarks, 14
 - 3.2 Symmetry Elements and Operations, 14
 - 3.3 Symmetry Planes and Reflections, 16
 - 3.4 The Inversion Center, 19
 - 3.5 Proper Axes and Proper Rotations, 19
 - 3.6 Improper Axes and Improper Rotations, 24
 - 3.7 Products of Symmetry Operations, 27
 - 3.8 Equivalent Symmetry Elements and Equivalent Atoms, 29
 - 3.9 General Relations Among Symmetry Elements and Operations, 31
 - 3.10 Symmetry Elements and Optical Isomerism, 32
 - 3.11 The Symmetry Point Groups, 33
 - 3.12 Symmetries with Multiple High-Order Axes, 39
 - 3.13 A Systematic Procedure for Symmetry Classification of Molecules, 45
 - 3.14 Illustrative Examples, 47
 - 3.15 Classes of Symmetry Operations, 52
 - Exercises, 56

4. Representations of Groups

- 4.1 Some Properties of Matrices and Vectors, 62
- 4.2 Representations of Groups, 75
- 4.3 The "Great Orthogonality Theorem" and Its Consequences, 78
- 4.4 Character Tables, 86
- 4.5 Representations for Cyclic Groups, 88
Exercises, 92

5. Group Theory and Quantum Mechanics

- 5.1 Wave Functions as Bases for Irreducible Representations,
- 5.2 The Direct Product, 98
- 5.3 Identifying Non zero Matrix Elements, 101
Exercises, 104

6. Symmetry-Adapted Linear Combinations

- 6.1 Introductory Remarks, 105
- 6.2 Projection Operators, 105
- 6.3 Some Illustrations, 111
Exercises, 119

Part II. Applications

7. Symmetry Aspects of Molecular Orbital Theory

- 7.2 General Principles, 123
- 7.2 Symmetry Factoring of Secular Equations, 130
- 7.3 Carbocyclic Systems, 133
- 7.4 More General Cases of LCAO-MO π Bonding, 149
- 7.5 A Worked Example: Naphthalene, 161
- 7.6 Electronic Excitations of Naphthalene: Selection Rules and Configuration Interaction, 165
- 7.7 Three-Center Bonding, 170
- 7.8 Symmetry-Based "Selection Rules" for Cyclization Reactions, 178
Exercises, 191

8. Hybrid Orbitals and Molecular Orbitals for AB_n -Type Molecules

- 8.1 Introduction, 194
- 8.2 Transformation Properties of Atomic Orbitals, 194

- 8.3 Hybridization Schemes for σ Orbitals, 199
- 8.4 Hybridization Schemes for π Bonding, 204
- 8.5 Hybrid Orbitals as Linear Combinations of Atomic Orbitals, 213
- 8.6 Molecular Orbitals Theory for AB_n -Type Molecules
- 8.7 The Relationship of the Molecular Orbital and the Hybridization Treatments, 222
- 8.8 Molecular Orbitals for Regular Octahedral and Tetrahedral Molecules, 224
- 8.9 Molecular Orbitals for Metal Sandwich Compounds, Exercises, 241

9. *Ligand Field Theory* 242

- 9.1 Introductory Remarks, 242
- 9.2 Electronic Structures of Free Atoms and Ions, 243
- 9.3 Splitting of Levels and Terms in a Chemical Environment, 249
- 9.4 Construction of Energy Level Diagrams, 254
- 9.5 Estimation of Orbital Energies, 272
- 9.6 Selection Rules and Polarizations, 280
- 9.7 Double Groups, 289
Exercises, 294

10. *Molecular Vibrations* 295

- 10.1 Introductory Remarks, 295
- 10.2 The Symmetry of Normal Vibrations, 295
- 10.3 Determining the Symmetry Types of the Normal Modes, 300
- 10.4 Contributions of Particular Internal Coordinates to Normal Modes, 306
- 10.5 How to Calculate Force Constants; The F and G Matrix Method, 309
- 10.6 Selection Rules for Fundamental Vibrational Transitions, 316
- 10.7 Illustrative Examples, 320
- 10.8 Some Important Special Effects, 330
Exercises, 339

Part III. Appendices

- I. *Crystallographic Point Groups, Stereographic Projections and International (Hermann-Maguin) Notation* 343

- II. Expansion of Determinants and the Inverse of a Matrix**
- III. Character Tables for Chemically Important Symmetry Groups**
- IV. A Caveat Concerning the Resonance Integral**
- V. The Shapes of f Orbitals**
- VI. A Sample Semi-empirical Molecular Orbital Calculation: BF_3 by the Extended Hückel Method**
- VII. Character Tables for Some Double Groups**
- VIII. Elements of the g Matrix**
- IX. Reading List**
