

# CONTENTS

|  |      |
|--|------|
| Preface  | vii  |
| SHORT BIBLIOGRAPHY   | xvii |
| TABLE OF ATOMIC AND MAGNETIC CONSTANTS                                   | xix  |
| CHAPTER 1 PRINCIPLES OF MAGNETIC RESONANCE                               | 1    |
| 1.1. Introduction  | 1    |
| 1.2. The N.M.R. Experiment   | 1    |
| 1.3. The E.S.R. Experiment   | 4    |
| 1.4. Thermal Equilibrium and Spin Relaxation                             | 4    |
| 1.5. The Resonance Line Shape  | 9    |
| 1.6. Magnetic Interactions   | 10   |
| CHAPTER 2 MAGNETIC RESONANCE SPECTRA<br>OF THE HYDROGEN AND HELIUM ATOMS | 13   |
| 2.1. Introduction  | 13   |
| 2.2. The Magnetic Hamiltonian  | 14   |
| 2.3. Perturbation Theory   | 15   |
| 2.4. The Basic Spin Functions and Zero-Order Energies                    | 16   |
| 2.5. The First-Order Hyperfine Energies                                  | 18   |
| 2.6. The Second-Order Hyperfine Interaction                              | 18   |
| 2.7. The First-Order E.S.R. Spectrum                                     | 21   |
| 2.8. The Second-Order E.S.R. Spectrum—Forbidden Transitions              | 22   |
| 2.9. The Zero-Field Levels of Hydrogen                                   | 23   |
| 2.10. The N.M.R. Spectrum of the Helium Atom                             | 23   |
| 2.11. Chemical Shielding   | 24   |
| 2.12. Corrections to the $g$ Factor                                      | 25   |
| 2.13. Anisotropic Effects  | 26   |

|         |          |  |    |
|---------|----------|--|----|
| CHAPTER | <b>3</b> | NUCLEAR RESONANCE IN SOLIDS                                  | 29 |
|         | 3.1.     | Introduction   | 29 |
|         | 3.2.     | The Dipolar Coupling Tensor                                  | 29 |
|         | 3.3.     | The N.M.R. Spectrum of Two Coupled Protons                   | 31 |
|         | 3.4.     | The Second Moment of an N.M.R. Absorption Line               | 33 |
|         | 3.5.     | Structural Studies by the Method of Moments                  | 34 |
|         | 3.6.     | Nuclear Quadrupole Resonance                                 | 36 |
| CHAPTER | <b>4</b> | THE ANALYSIS OF N.M.R. SPECTRA IN LIQUIDS                    | 40 |
|         | 4.1.     | Introduction   | 40 |
|         | 4.2.     | The Chemical Shift   | 41 |
|         | 4.3.     | The Spin-Spin Coupling                                       | 43 |
|         | 4.4.     | The Analysis of Complex Spectra                              | 44 |
|         | 4.5.     | Practical Considerations                                     | 52 |
| CHAPTER | <b>5</b> | INTERPRETATION OF CHEMICAL SHIFTS<br>AND SPIN-SPIN COUPLINGS | 54 |
|         | 5.1.     | Introduction   | 54 |
|         | 5.2.     | Origins of the Chemical Shift                                | 54 |
|         | 5.3.     | Proton Chemical Shifts                                       | 58 |
|         | 5.4.     | Shifts from Other Nuclei                                     | 61 |
|         | 5.5.     | The Origin of Nuclear Spin-Spin Couplings                    | 64 |
|         | 5.6.     | Proton Spin-Spin Couplings                                   | 66 |
|         | 5.7.     | Molecular Structure Studies by N.M.R.                        | 68 |
| CHAPTER | <b>6</b> | E.S.R. SPECTRA OF ORGANIC RADICALS IN SOLUTION               | 72 |
|         | 6.1.     | The Spin Hamiltonian: Hyperfine Splittings                   | 72 |
|         | 6.2.     | Sets of Equivalent Protons                                   | 74 |
|         | 6.3.     | Hyperfine Patterns from Other Nuclei                         | 78 |

|  |    |
|--|----|
| 6.4. Mechanism of the Hyperfine Coupling                   | 80 |
| 6.5. Spin Distributions in Alternant Hydrocarbon Ions      | 86 |
| 6.6. Negative Spin Densities in Odd Alternant Radicals     | 91 |
| 6.7. Hyperfine Splitting from $C^{13}$ and $N^{14}$ Nuclei | 93 |
| 6.8. Applications of E.S.R. to Solution Chemistry          | 95 |

CHAPTER 7 E.S.R. OF TRAPPED RADICALS IN SOLIDS

99

|   |     |
|---|-----|
| 7.1. Introduction                                       | 99  |
| 7.2. The Spin Hamiltonian                               | 99  |
| 7.3. The First-Order E.S.R. Spectrum                    | 100 |
| 7.4. Second-Order Effects                               | 102 |
| 7.5. Experimental Determination of the Hyperfine Tensor | 103 |
| 7.6. The Sign of the Electron-Nuclear Dipolar Coupling  | 105 |
| 7.7. $\alpha$ -Proton Coupling Tensors                  | 106 |
| 7.8. Delocalized $\pi$ -Electron Radicals               | 107 |
| 7.9. Hyperfine Coupling from $\beta$ Protons            | 109 |
| 7.10. Hyperfine Tensors of Other Nuclei                 | 110 |
| 7. Randomly Oriented Solids                             | 112 |

CHAPTER 8 E.S.R. OF ORGANIC MOLECULES IN TRIPLET STATES

|   |     |
|---|-----|
| 8.1. Introduction                                 | 115 |
| 8.2. Electron Spin-Spin Interaction               | 116 |
| 8.3. The Triplet Energy Levels                    | 118 |
| 8.4. Transitions with $\Delta m_s = 2$            | 121 |
| 8.5. Hyperfine Structure                          | 123 |
| 8.6. Further Studies of Excited Triplet States    | 124 |
| 8.7. Organic Molecules with Triplet Ground States | 125 |
| 8.8. Triplet Excitons                             | 128 |
| 8.9. Radical-Ion Clusters in Solution             | 129 |

|         |           |  |     |
|---------|-----------|--|-----|
| CHAPTER | <b>9</b>  | THEORY OF THE $g$ TENSOR AND THE E.S.R. SPECTRA<br>OF INORGANIC RADICALS | 132 |
|         | 9.1.      | Determination of the $g$ Tensor in Crystals                              | 132 |
|         | 9.2.      | Theory of the $g$ Tensor and the Effective Spin Hamiltonian              | 133 |
|         | 9.3.      | A Simple Example   | 136 |
|         | 9.4.      | The $g$ Tensor in Molecules  | 137 |
|         | 9.5.      | The $\text{CO}_2^-$ Radical  | 138 |
|         | 9.6.      | Other Inorganic Radicals   | 142 |
| CHAPTER | <b>10</b> | E.S.R. OF TRANSITION METAL IONS AND COMPLEXES                            | 146 |
|         | 10.1.     | Introduction   | 146 |
|         | 10.2.     | Energy Levels of the $d$ Electrons                                       | 147 |
|         | 10.3.     | General Features of the E.S.R. Spectra                                   | 152 |
|         | 10.4.     | Kramers' Theorem   | 152 |
|         | 10.5.     | The $g$ Tensor in Ions with $S = 1/2$                                    | 153 |
|         | 10.6.     | The Zero-field Splitting of Triplet States                               | 158 |
|         | 10.7.     | Ions with Spin $S$ Greater Than One                                      | 163 |
|         | 10.8.     | Hyperfine Splitting from the Metal Nucleus                               | 166 |
|         | 10.9.     | Covalent Bonding and Ligand Hyperfine Structure                          | 167 |
|         | 10.10.    | Electron Exchange Coupling   | 171 |
|         | 10.11.    | The Rare-Earth Ions  | 172 |
|         | 10.12.    | Spin-Lattice Relaxation  | 173 |
| CHAPTER | <b>11</b> | SPIN RELAXATION  | 176 |
|         | 11.1.     | Introduction   | 176 |
|         | 11.2.     | Bloch's Equations  | 176 |
|         | 11.3.     | The Lorentz Line Shape   | 179 |
|         | 11.4.     | The Origin of Magnetic Relaxation  | 182 |
|         | 11.5.     | Nuclear Spin Relaxation in the Water Molecule                            | 183 |
|         | 11.6.     | Other Nuclear Relaxation Mechanisms                                      | 194 |
|         | 11.7.     | Spin Relaxation of Radicals in Solution                                  | 197 |

|          |           |   |     |
|----------|-----------|---|-----|
| CHAPTER  | <b>12</b> | THE STUDY OF MOLECULAR RATE PROCESSES                         | 204 |
|          | 12.1.     | The Time Scale of Magnetic Resonance Experiments              | 204 |
|          | 12.2.     | The Line Shape for a Jumping Spin                             | 205 |
|          | 12.3.     | Chemical Exchange Effects in N.M.R. Spectra                   | 208 |
|          | 12.4.     | Rate Effects in E.S.R. Spectra                                | 213 |
| CHAPTER  | <b>13</b> | NUCLEAR RESONANCE<br>IN PARAMAGNETIC SYSTEMS—DOUBLE RESONANCE | 221 |
|          | 13.1.     | Introduction  | 221 |
|          | 13.2.     | The Knight Shift  | 221 |
|          | 13.3.     | Unpaired Electron Distributions by N.M.R.                     | 223 |
|          | 13.4.     | Relaxation by Paramagnetic Ions in Solution                   | 225 |
|          | 13.5.     | Electron Nuclear Double Resonance                             | 229 |
|          | 13.6.     | Spin Decoupling in N.M.R.                                     | 236 |
| APPENDIX | <b>A</b>  | MATRIX ELEMENTS AND EIGENVALUES                               | 243 |
| APPENDIX | <b>B</b>  | TIME-INDEPENDENT PERTURBATION THEORY                          | 245 |
| APPENDIX | <b>C</b>  | SPIN ANGULAR MOMENTUM   | 246 |
| APPENDIX | <b>D</b>  | TENSORS AND VECTORS   | 249 |
| APPENDIX | <b>E</b>  | TIME-DEPENDENT PERTURBATION THEORY                            | 252 |
| APPENDIX | <b>F</b>  | CALCULATION OF $T_1$ AND $T_2$ FOR A SPIN OF $1/2$            | 254 |
| APPENDIX | <b>G</b>  | THE POWER SPECTRUM OF A RANDOM FUNCTION                       | 257 |
| APPENDIX | <b>H</b>  | THE DIFFUSION EQUATION FOR BROWNIAN MOTION                    | 259 |
| APPENDIX | <b>I</b>  | Tensor Averages in a Rotating Molecule                        | 260 |
| INDEX    |           |   | 265 |
