

<b>Prologue</b>	<b>1</b>
the beginnings	1
the atomic hypothesis: cornerstone of chemistry	2
the dawn of quantum mechanics	3
<b>1 Quantum mechanics and the hydrogen atom</b>	<b>4</b>
1-1 an intuitive basis for quantum theory	4
1-2 quantum mechanics	13
1-3 the hydrogen atom	29
<b>2 Many-electron atoms</b>	<b>41</b>
2-1 the energy levels of many-electron atoms	41
2-2 ionization energy and valence electrons	53
<b>3 Quantum mechanics and chemical bonds</b>	<b>67</b>
3-1 what is a molecule?	67
3-2 why do chemical bonds form?	69
3-3 the simplest molecule, $H_2^+$	72
3-4 molecules and the Pauli Principle	81
3-5 molecules with more electrons	86
3-6 on to bigger game	99
<b>4 Simple molecular orbitals</b>	<b>101</b>
4-1 $H_2^+$ : a source of approximate M.O.'s for $H_2$	101
4-2 approximate M.O.'s for 2p orbitals	105
4-3 M.O.'s for the oxygen molecule	107
4-4 M.O.'s for other first-row, homonuclear, diatomic molecules	112
4-5 M.O.'s and first-row heteronuclear, diatomic molecules	118
4-6 approximate M.O.'s for methylene, $CH_2$	121
4-7 approximate M.O.'s for carbon dioxide, $CO_2$	126
4-8 wrap-up on M.O.'s	131
<b>5 Approximate representations of chemical bonds</b>	<b>132</b>
5-1 general principles of bonding	132
5-2 inert gases, electron-pairs and chemical bonding	133
5-3 inert gases, electron quartets and chemical bonding	148
5-4 pigeonholes and chemical bonding	153

<b>6</b>	<b>Molecular geometry and molecular dipole moments</b>	<b>162</b>
6-1	orbital hybridization and bond angles	162
6-2	electron repulsion and bond angles	172
6-3	contrast of the hybridization and electron repulsion models	176
6-4	molecular dipole moments	179
<b>7</b>	<b>Chemical bond types</b>	<b>186</b>
7-1	covalent bonds	186
7-2	heteronuclear bonds: ionic bonds	195
7-3	electron donor-acceptor bonds	201
7-4	electron-excess compounds	213
7-5	electron-deficient compounds	225
7-6	new frontiers	229
7-7	reprise on chemical bonding	234
<b>8</b>	<b>Solids and liquids</b>	<b>236</b>
8-1	a general description of liquids and solids	236
8-2	the inert gases	239
8-3	molecular solids and liquids	249
8-4	covalent solids	255
8-5	hydrogen bonded solids	261
8-6	metals	272
8-7	ionic solids	286
8-8	chemical bonds and the future	298
	<b>Appendices</b>	<b>299</b>
a:	ionization energies of the elements	301
b:	ionization energies of molecules	305
c:	electron affinities of molecules	306
d:	bond energies, bond lengths, and force constants for diatomic molecules	307
e:	molecular dipole moments and bond lengths	310
f:	bond lengths and energies for hydrides and halides	311
g:	bond lengths, dissociation energies, and dipole moments in polyatomic molecules	313
h:	bond energies and lengths in polyatomic molecules	314
i:	physical constants	315
j:	conversion factors	316
