## Part One PRINCIPLES of Laboratory Practice

1. Introduction: General Instructions to the Student	3
2. Data Processing	8
3. Drawing Graphs from Experimental Data	23
4. Selected Numerical and Graphical Methods	25
✓ 5. Recording and Reporting Data	42
6. Temperature Measurement and Control	50
/ 7. Calorimetry	63
8. Density Measurement	75
9. Pressure Measurements, Vacuum Systems, Handling Gases	79
/ 10. Vapor Pressures and Boiling Points of Liquids and Solutions	99
✓ 11. Thermal Methods of Analysis	105
/ 12. Viscosity	113
/ 13. Surfaces and Membranes	124
14. Electrical Measurements and Circuits	139
15. Electrical and Electronic Devices	168
✓ 16. Electrochemistry	186

CONTENTS

✓ 17. Polarimetry	217
✓ 18. Refractometry	221
19. Absorption and Emission of Radiation	226
20. X-Ray Diffraction	251
21. Magnetochemistry	269
22. Mass Spectrometry	289
23. Thermodynamics of Irreversible Processes	302
24. Techniques of Chemical Kinetics	316
25. Introduction to Computers	324

**Part Two**

**EXPERIMENTS:**

**Applications of Laboratory Techniques**

1. Viscosity of a Gas / <i>Pressure-Time Measurement</i>	345
2. Velocity of Gas Molecules / <i>Speed-of-Sound Method</i>	347
3. Viscosity of a Liquid / <i>Ostwald Viscometry</i>	351
4. Vapor Pressure Versus Temperature / <i>Ramsay-Young, Isoteniscope, or Internal Manometer Method</i>	354
5. X-Ray Diffraction Photographs of a Cubic Solid / <i>Debye-Hull-Scherrer Method</i>	356
6. Repeat Distance in a Fiber / <i>Rotating-Crystal X-Ray Method</i>	360
7. Repeat Distance in a Single Crystal / <i>Rotating-Crystal X-Ray Method</i>	362
8. Molecular Weight of a Solid / <i>Cryoscopy</i>	364
9. Cryoscopic Constant / <i>Beckmann Method</i>	366
10. Activity of a Solvent / <i>Vapor Pressure by Ramsay-Young Method</i>	369
11. Mean Ionic Activity Coefficient / <i>EMF Measurement</i>	372
12. Transference, Ionic Conductance, and Ionic Mobility / <i>Conductance, Moving-Boundary Method</i>	376

13. Energies and Heats of Combustion and Formation / <i>Constant Volume Calorimetry</i>	
14. Resonance Stabilization Energy of <i>o</i> -Phthalic Anhydride <i>Constant Volume Calorimetry</i>	381
15. Heat of Neutralization and Dilution / <i>Constant Pressure Calorimetry</i>	
16. Standard Free Energy, Enthalpy, and Entropy of Reaction / <i>EMF Measurement</i>	386
17. Partial Molar Volume / <i>Pycnometry</i>	389
18. Liquid-Solid Equilibrium / <i>Thermal Analysis</i>	392
19. Phase Diagram of a Binary Liquid-Vapor System / <i>Choppin-Cottrell Method</i>	
20. Vapor and Sublimation Pressure / <i>Internal Manometer Method</i>	400
21. $pK_a$ of an Indicator / <i>Spectrophotometry</i>	402
22. Ionization Constant of a Weak Acid / <i>Kohlrausch Conductance Method</i>	406
23. Formation Constant of a Complex Ion / <i>Polarography</i>	409
24. Solubility of an Insoluble Salt / <i>EMF Method</i>	411
25. Decomposition Pressure of Ammonium Carbamate / <i>Mercury Isoteniscope Method</i>	
26. Dimerization of Acetic Acid Vapor / <i>Mercury Isoteniscope Method</i>	415
27. Kinetics of the Iodide-Catalyzed Decomposition of $H_2O_2$ / <i>Gas Volume Measurement</i>	418
28. Rate of the Acid-Catalyzed Hydrolysis of Sucrose / <i>Polarimetry</i>	421
29. Effect of Ionic Strength on the Rate of a Reaction / <i>Spectrophotometry</i>	424
30. Kinetics of a Fast Reaction, by a Relaxation Technique / <i>Concentration-Jump Method</i>	
31. Kinetics of the Formation of Peroxochromic Acid / <i>Stopped- Flow Method</i>	431
32. Cross Sectional Area of Molecules in a Soluble Monolayer / <i>Surface Tension Measurement</i>	

## CONTENTS

33. Insoluble Monolayers on a Liquid Surface / <i>Surface Pressure Measurement</i>	437
34. Surface Area of a Powder / <i>BET Gas Adsorption Method</i>	
35. Dipole Moment of a Polar Liquid / <i>Dielectric Constant Measurement and Refractometry</i>	
36. Bond Moments, Bond Angles, and Dipole Moments / <i>Dielectric Constant Measurement and Refractometry</i>	
37. Dissociation Energy of Halogen Gases / <i>Ultraviolet Spectrophotometry</i>	453
38. Molecular Weight and Shape of Dissolved Polymer Molecules / <i>Viscometry</i>	456
39. Electronic Structure of an Ion / <i>Magnetic Susceptibility Method</i>	458
40. Isotopic Composition of an Element / <i>Mass Spectrometry</i>	461
41. Appearance Potentials of Gaseous Ions / <i>Mass Spectrometry</i>	463
42. The Hydrogen Emission Spectrum / <i>Emission Spectrography</i>	465
43. Vibrational-Rotational Spectra of Gases / <i>Infrared Spectrophotometry</i>	
44. Effect of Isotopic Mass Change on Molecular Vibration / <i>Infrared Spectrophotometry</i>	471
45. The ESR Spectrum of a Free Radical	473
46. Quantum Efficiency of a Photochemical Reaction / <i>Chemical Actinometry</i>	475
47. Equilibrium Constant of a System in an Excited State / <i>Fluorimetry</i>	479
48. Electrokinetic Phenomena	483
49. Correlation of Polarographic Reduction Potentials and Electron Affinity / <i>Polarography</i>	488

## APPENDIXES

1. Atomic Weights of the Elements	491
2. Units and Important Physical Constants	494

3. Relative Density and Volume of Water	498
4. Temperature Correction for Barometric Readings	500
5. Density of Mercury	501
6. Glassworking	502
7. Electrical Work	508
8. Color Code for Electronic Components	511
9. Soldering	512
Index	515
