

# Contents

<b>Chapter 1</b>	<b>An Ethical Commitment and an Economic Opportunity</b>	<b>1</b>
	<i>M. de la Guardia and S. Garrigues</i>	
1.1	Green Analytical Chemistry in the Framework of the Ecological Paradigm of Chemistry	2
1.2	Environment and Operator Safety: an Ethical Commitment	4
1.3	Green Chemistry Principles and Green Analytical Chemistry	7
1.4	Strategies for a Green Analytical Chemistry	9
1.5	Cost of Green Analytical Chemistry	10
	Acknowledgements	11
	References	11
<b>Chapter 2</b>	<b>Direct Determination Methods Without Sample Preparation</b>	<b>13</b>
	<i>S. Garrigues and M. de la Guardia</i>	
2.1	Remote Sensing and Teledetection Systems	14
2.2	Non-Invasive Methods of Analysis	19
2.3	Direct Analysis of Solid and Liquid Samples Without Sample Damage	23
	2.3.1 Elemental Analysis by X-Ray Techniques	23
	2.3.2 Molecular Analysis by NMR	24
	2.3.3 Molecular Analysis by Vibrational Spectroscopy	25
2.4	Analysis of Solids Without Using Reagents	29
	2.4.1 Electrothermal Atomic Absorption Spectrometry	29
	2.4.2 Arc and Spark Optical Emission Spectrometry	30

Published by the Royal Society of Chemistry, www.rsc.org

2.4.3	Laser Ablation	31
2.4.4	Laser-Induced Breakdown Spectroscopy	33
2.4.5	Glow Discharge	34
2.4.6	Desorption Electrospray Ionization	37
2.5	Summary of Present Capabilities of Direct Determinations	38
	Acknowledgements	39
	References	39
<b>Chapter 3</b>	<b>Replacement of Hazardous Solvents and Reagents in Analytical Chemistry</b>	<b>44</b>
	<i>Jennifer L. Young and Douglas E. Raynie</i>	
3.1	Green Solvents and Reagents: What This Means	45
3.2	Greener Solvents	46
3.2.1	Supercritical Fluids	47
3.2.2	Ionic Liquids	48
3.2.3	Water	49
3.2.4	Green Organic Solvents	51
3.3	Greener Reagents	56
3.3.1	Chelating Agents	56
3.3.2	Derivatization	56
3.3.3	Preservatives	58
	References	60
<b>Chapter 4</b>	<b>Green Sample Preparation Methods</b>	<b>63</b>
	<i>Carlos Bendicho, Isela Lavilla, Francisco Pena and Marta Costas</i>	
4.1	Greening in Sample Preparation	63
4.2	Microwave-Assisted Sample Preparation: Digestion and Extraction	65
4.2.1	Microwave-Assisted Digestion	66
4.2.2	Microwave-Assisted Extraction	69
4.3	Ultrasound-Assisted Sample Preparation: Digestion and Extraction	70
4.3.1	Ultrasound-Assisted Digestion	72
4.3.2	Ultrasound-Assisted Extraction	73
4.4	Supercritical Fluid Extraction	75
4.5	Pressurized Liquid Extraction	79
4.6	Solid-Phase Extraction	81
4.7	Microextraction Techniques	83
4.7.1	Solid-Phase Microextraction	83
4.7.2	Stir Bar Microextraction	86

<i>Contents</i>	xi
4.7.3 Liquid Phase Microextraction	87
4.8 Membrane-Based Extraction	90
4.9 Surfactant-Based Sample Preparation Methods	94
4.9.1 Surfactant-Based Extraction	94
4.9.2 Emulsification	98
4.10 Present State of Green Sample Preparation	99
References	99
<b>Chapter 5 Miniaturization of Analytical Methods</b>	<b>107</b>
<i>Miren Pena-Abaurrea and Lourdes Ramos</i>	
5.1 Miniaturization as an Alternative for Green Analytical Chemistry: Strengths and Current Limitations	107
5.2 Miniaturized Analytical Techniques for Treatment of Liquid Samples	110
5.2.1 Solvent-Based Miniaturized Extraction Techniques	110
5.2.2 Sorption-Based Miniaturized Extraction Techniques	118
5.3 Miniaturized Analytical Techniques for Treatment of Solid Samples	130
5.3.1 Matrix Solid-Phase Dispersion	130
5.3.2 Enhanced Fluid/Solvent Extraction Techniques	133
5.4 Analytical Micro-Systems: From Lab-on-a-Valve to $\mu$ -TAS	136
Acknowledgments	138
References	138
<b>Chapter 6 Green Analytical Chemistry Through Flow Analysis</b>	<b>144</b>
<i>Fábio R.P. Rocha and Boaventura F. Reis</i>	
6.1 The Scope of Flow Systems in Chemical Analysis and Green Analytical Chemistry	144
6.2 Brief Description of Flow Systems	145
6.2.1 Segmented Flow Analysis	145
6.2.2 Flow Injection Analysis	145
6.2.3 Sequential Injection Analysis	146
6.2.4 Monosegmented Flow Analysis	147
6.2.5 Multicommutation Approach	147
6.2.6 Multipumping and Multisyringe Flow Systems	149
6.3 Evolution of System Design and Reduction of Waste Generation	149

6.4	Contributions of Flow-Based Procedures to Green Analytical Chemistry	152
6.4.1	Replacement of Hazardous Chemicals	152
6.4.2	Reuse of Chemicals	155
6.4.3	Minimization of Reagent Consumption and Waste Generation	155
6.4.4	Waste Treatment	163
6.5	Future Trends in Automation	164
	References	164
<b>Chapter 7</b>	<b>Green Analytical Separation Methods</b>	<b>168</b>
	<i>Mihkel Kaljurand and Mihkel Koel</i>	
7.1	Why Green Separation Methods Are Needed in Analytical Chemistry	168
7.2	Green Chromatography	169
7.2.1	Gas-Phase Separations	169
7.2.2	Liquid Phase Separations	171
7.3	Miniaturization of Separation Methods	185
7.3.1	Continuous-Flow Microfluidics	186
7.3.2	Droplet and Digital Microfluidics	186
7.3.3	World-to-Chip Interfacing and the Quest for a ‘Killer’ Application in Microfluidics	189
7.3.4	Non-Instrumental Microfluidic Devices	191
7.4	Challenges in Miniaturization of Separation Methods	195
	References	195
<b>Chapter 8</b>	<b>Green Electroanalysis</b>	<b>199</b>
	<i>Lucas Hernández, José M. Pingarrón and Paloma Yáñez-Sedeño</i>	
8.1	The Role of Electroanalytical Chemistry in Green Chemistry	199
8.2	Green Stripping Voltammetric Methods for Trace Analysis of Metal and Organic Pollutants	200
8.2.1	Determination of Trace Metal Ions with Bismuth Film Electrodes	200
8.2.2	Determination of Organic Compounds with Bismuth Electrodes	201
8.2.3	Stripping Voltammetry at Other Modified Electrodes	201
8.3	Electrochemical Sensors as Tools for Green Analytical Chemistry	202

8.3.1	Electrochemical Detection in Flow Injection Analysis and Other Injection Techniques	203
8.3.2	Microsystems	207
8.4	Alternative Solvents	209
8.4.1	Ionic Liquids	209
8.4.2	Supercritical Fluids	211
8.5	New Electrode Materials	212
8.5.1	Metal Nanoparticles	212
8.5.2	Hybrid Nanocomposites	213
8.5.3	Oxide Nanoparticles	213
8.5.4	Polymers	214
8.5.5	Solid Amalgams	214
8.6	Electrochemical Biosensors	214
8.6.1	Environmental Applications	215
8.6.2	Biosensors Using Ionic Liquids	216
8.6.3	Natural Biopolymers	218
8.6.4	Microsystems-Based Biosensors	218
8.7	Future Trends in Green Electroanalysis	220
	References	220

## **Chapter 9 Green Analytical Chemistry in the Determination of Organic Pollutants in the Environment** **224**

*Sandra Pérez, Marinella Farré, Carlos Gonçalves, Jaume Aceña, M. F. Alpendurada and Damià Barceló*

9.1	Green Analytical Methodologies for the Analysis of Organic Pollutants	224
9.2	Sample Preparation	226
9.2.1	Solvent-Reduced Techniques	226
9.3	Greening Separation and Detection Techniques	247
9.3.1	Immunochemical Techniques	247
9.3.2	Biosensors	251
9.3.3	Non-Biological Techniques	270
9.4	Future Trends in Organic Pollutants Analysis	273
	References	274

## **Chapter 10 On-line Decontamination of Analytical Wastes** **286**

*Sergio Armenta and Miguel de la Guardia*

10.1	Introduction	286
10.2	Recycling of Analytical Wastes: Solvents and Reagents	287
10.3	Degradation of Wastes	293
10.3.1	Thermal Degradation	294
10.3.2	Chemical Oxidation	294

	<i>Contents</i>
10.3.3 Photocatalytic Degradation	294
10.3.4 Biodegradation	295
10.4 Passivation of Toxic Wastes	296
Acknowledgements	298
References	298
