Contents

Chapter 1
A BRIEF REVIEW
Roberto Fernández-Prini
1.1 Introduction .....
1.2 Effect of p and T over the properties of liquid water . 3
1.2.1 Thermodynamic properties 3
1.2.2 Radial distribution functions 6
1.2.3 Infrared spectroscopy 8
1.2.4 Dielectric constant of water 11
1.2.5 Computer simulation studies 13
1.2.6 Conclusions 14
1.3 Density dependence of aqueous solution properties . 16
1.4 The vicinity of the solvent critical region 21
1.5 References 22

Chapter 2
AQUEOUS SOLUTIONS OF NONELECTROLYTES
Roberto Fernández-Prini
2.1 Binary aqueous solutions of nonpolar gases 26
2.1.1 Solubility of gases in liquids 26
2.1.2 Thermodynamics of liquid-vapor equilibrium in binary fluid systems 28
2.1.3 Equation of state for gaseous mixtures of H_2O vapor with nonpolar gases 31
2.1.4 Thermodynamic quantities of dissolution: the effect of temperature 35
2.1.5 The effect of pressure upon the dissolution of gases in water 39
2.1.6 Behavior close to T_{c1} 41
2.2 Models for aqueous solutions of nonpolar gases 43
2.2.1 Calculations of thermodynamic properties using a perturbation method 43
2.2.2 Discussion of the model 49
2.3 Solutions of gases with stronger interactions 53
2.3.1 Extension and limitations of the perturbation procedure 53
2.3.2 An alternative approach 56
2.3.3 Systems with chemical reaction 59
2.4 Solubility of liquids and nonionic solids 59
2.4.1 Liquids 59
2.4.2 Nonionic solids 61
2.5 Solubility of gases in aqueous electrolyte solutions 63

2.5.1 Thermodynamic description of gas solubility in electrolyte solutions 63
2.5.2 General features of the effect of electrolytes upon the solubility of gases in water ... 64
2.5.3 Models for salting of gases in aqueous solutions ... 66
2.5.4 Conclusions based on the results of the calculations ... 68
2.6 References ... 70

Chapter 3
ELECTROLYTE SOLUTIONS
Horacio R. Corti

3.1 Introduction ... 73
3.1.1 The experimental approach ... 76
3.1.2 Thermodynamics of ionic solutions ... 77
3.2 Standard partial molar properties ... 79
3.2.1 The correspondence principle ... 81
3.2.2 Continuum models ... 84
3.2.3 Semicontinuum models ... 90
3.2.4 Entropy of the aqueous hydrogen ion and absolute scale of ionic entropies ... 93
3.2.5 Modified Born equations and the limitations of primitive models ... 97
3.2.6 Nonprimitive models ... 98
3.3 Excess properties ... 100
3.3.1 The limiting behavior at high temperature ... 101
3.3.2 Pitzer equations: the ion interaction model ... 103
3.3.3 Integral equations ... 106
3.4 Ion association ... 109
3.4.1 Ion interaction and chemical models ... 109
3.4.2 Bjerrum's approach and its generalization through cluster models 111
3.5 Extremely concentrated solutions ... 114
3.5.1 From dilute solutions to fused salts ... 118
3.6 Mixed electrolytes ... 120
3.7 Ionic reactions ... 124
3.7.1 Isocoulombic reactions ... 125
3.8 Modeling multicomponent systems ... 127
3.8.1 Phase equilibria in ionic systems ... 128
3.9 References ... 130

Chapter 4
WEAK ELECTROLYTES
Horacio R. Corti

4.1 Introduction ... 137
4.2 Standard and excess properties ... 139
4.3 Dissociation equilibria: experimental results ... 140
4.4 Modeling dissociation reactions at high temperature 141
4.4.1 Semiempirical models ... 141
4.4.2 Isocoulombic reactions ... 145
4.5 Speciation in solution ... 147
4.5.1 Ionic strength effect on dissociation equilibria 149
4.5.2 Pressure effect on the dissociation equilibria .. 150

4.5.3 Effect of temperature on speciation 151
4.6 References 152

Chapter 5
DILUTE SOLUTIONS NEAR CRITICAL CONDITIONS
María Laura Japas
5.1 Introduction 155
5.2 Phase diagrams and critical curves 156
5.2.1 Volatile solutes 156
5.2.2 Nonvolatile solutes 162
5.3 Thermodynamic description 165
5.3.1 Classical expansions 165
5.3.2 Comparison with experiment 172
5.4 Equilibrium in the critical region 178
5.4.1 Phase equilibrium 179
5.4.2 Chemical equilibrium 183
5.4.3 Conclusions 184
5.5 References 185

Appendix A
STATISTICAL MECHANICAL TOOLS
Roberto Fernández-Prini
A.1 Pair correlation functions and thermodynamic properties 189
A.2 Ornstein-Zernike equation 190
A.3 Hard-sphere fluids 191
A.4 Thermodynamics of hard-sphere mixtures 192
A.5 Systems with attractive potentials 193
A.6 Other important equations 197
A.7 Perturbation methods 198
A.8 References 201
