PREFACE	vii
CHAPTER 1. FUNDAMENTAL BASIS OF THERMODYNAMICS	1
1.1. The Nature of a Function	1
1.2. Properties of Simple Systems	2
1.3. The Special Functions of Thermodynamics	3
1.4. The First and Second Laws of Thermodynamics	9
CHAPTER 2. THERMODYNAMIC PROPERTIES OF FLUIDS	11
2.1. The Principal Thermodynamic Functions	11
2.2. Some Equations for a Homogeneous Phase of Constant Composition	14
2.3. Basic Equations for Solutions	19
2.4. Auxiliary Thermodynamic Functions	26
2.5. Special Equations for the Gibbs Function and Related Properties	33
2.6. Another Expression for the Chemical Potential	38
CHAPTER 3. BEHAVIOR OF CONSTANT-COMPOSITION FLUIDS	40
3.1. Thermodynamic Properties from $P$ - $V$ - $T$ Data	40
3.2. Equations of State	45
3.3. Qualitative Representation of Behavior	61
CHAPTER 4. PROPERTY CHANGES OF MIXING	69
4.1. General Equations	69
4.2. Ideal Solutions	70
4.3. Excess Properties of Solutions	73
4.4. Special Equations for the Gibbs Function and Related Properties	76
4.5. Experimental Measurements and the Calculation of Property Changes of Mixing	80
CHAPTER 5. PARTIAL MOLAL PROPERTIES	87
5.1. Calculation from Experimental Data	87
5.2. Use of an Equation of State	90
5.3. General Equations for Homogeneous Binary Systems	97
5.4. Tests for Thermodynamic Consistency	105
CHAPTER 6. APPLICATIONS TO VAPOR-LIQUID EQUILIBRIUM	111
6.1. Criteria of Equilibrium	111
6.2. Vapor-Liquid Equilibrium—The General Problem	118
6.3. Vapor-Liquid Equilibrium at Low Pressures	120
6.4. Representation of Activity Coefficients for Binary Liquids	124
6.5. Tests for Thermodynamic Consistency	131
6.6. Influence of Temperature on Activity Coefficients	134
6.7. Calculation of Vapor-Liquid Equilibria from Vapor Pressure Data	136
6.8. Experimental Measurements	148
CHAPTER 7. EPILOGUE	151
7.1. Partially Miscible Binary Liquids	151
7.2. High-Pressure Phase Equilibria	158
INDEX	163
