## CHAPTER 1

### PRINCIPLES OF EMULSION FORMATION

*E. S. R. Gopal*

1. Introduction . . . . .	
2. Basic Methods of Preparing Emulsions . . . . .	4
3. Physico-Chemical Factors Affecting the Formation of Emulsions . . . . .	14
4. Studies on Model Systems for Emulsification . . . . .	23
5. Sonic and Ultrasonic Emulsification . . . . .	43
6. Emulsion Formation by Electric Dispersion . . . . .	55
7. Spontaneous Emulsification. . . . .	59
8. The Problem of Demulsification . . . . .	65
9. Acknowledgements . . . . .	72
Bibliography . . . . .	72

## CHAPTER 2

### THE THEORY OF STABILITY OF EMULSIONS

*J. A. Kitchener and P. R. Mussellwhite*

1. Surface-chemical Factors in Stability . . . . .	77
2. Application of the Theory of Stability of Lyophobic Colloids to Emulsions . . . . .	96
3. Stability Against Coalescence Related to Mechanical Properties of Interfacial Layers . . . . .	117
4. Some Significant Findings from Emulsion Stability Studies . . . . .	121
Summary of Main Conclusions . . . . .	125
Bibliography . . . . .	125

## CHAPTER 3

### GENERAL PROPERTIES OF EMULSIONS AND THEIR CONSTITUENTS

*Philip Sherman*

1. Freeze-Thaw Stability. . . . .	131
2. Stability to Elevated Temperature . . . . .	135
3. Stability to Ultracentrifugation . . . . .	136
4. The HLB System for Emulsion Formulation . . . . .	140
5. Globule Size Distribution . . . . .	153
6. Electrophoresis . . . . .	172

7. Surface and Interfacial Tensions . . . . .	178
8. Wetting . . . . .	190
9. Properties of Emulsifier Films at Oil-Water Interfaces . . . . .	200
10. Microemulsions . . . . .	205
11. Multiple Emulsions . . . . .	206
12. Tests for Emulsion Type . . . . .	207
Nomenclature . . . . .	209
Bibliography . . . . .	212

## CHAPTER 4

## RHEOLOGY OF EMULSIONS

*Philip Sherman*

1. General Types of Flow . . . . .	217
2. Techniques for Studying Rheological Properties . . . . .	221
3. Analysis of Non-Newtonian Viscosity Data . . . . .	248
4. Rheology of Model Dispersions . . . . .	279
5. Factors Which Influence the Rheological Properties of Emulsions . . . . .	285
6. Rheological Changes in Emulsions when Aged . . . . .	331
Nomenclature . . . . .	341
Bibliography . . . . .	347

## CHAPTER 5

## ELECTRICAL PROPERTIES OF EMULSIONS

*Tetsuya Hanai*

1. Introduction . . . . .	354
2. Fundamental Properties of Dielectric Phenomena . . . . .	355
3. Experimental Methods for Studying Dielectric Properties . . . . .	363
4. Theories of Dielectric Constants and of Conductivities of Heterogeneous Systems . . . . .	369
5. Theories of Complex Dielectric Constants of Heterogeneous Disperse Systems; Interfacial Polarization due to Heterogeneous Structure . . . . .	380
6. Experimental Results for Dielectric Constants and the Conductivities of Emulsions; Confirmation of the Interfacial Polarization . . . . .	407
7. Elementary Explanation of Dielectric Dispersion due to the Interfacial Polarization . . . . .	443
8. Some Other Types of Frequency Dependence of Dielectric Constants . . . . .	446
9. Dielectric Properties of Some Disperse Systems . . . . .	449
10. Dielectric Theories of Homogeneous Systems; Molecular Solutions . . . . .	461
11. Comparison of the Dielectric Constants for Various Disperse Conditions . . . . .	464
12. Dielectric Properties in Relation to the Flow States . . . . .	466
13. Concluding Remarks . . . . .	474
Bibliography . . . . .	475

## CHAPTER 1

# Principles of Emulsion Formation

E. S. R. GOPAL

*Department of Physics,  
Indian Institute of Science,  
Bangalore*

1. Introduction . . . . .	
A. Disruption Versus Recombination . . . . .	
B. Fast and Slow Processes . . . . .	
C. Plan of the Chapter . . . . .	
2. Basic Methods of Preparing Emulsions . . . . .	
A. Condensation Method . . . . .	
B. Dispersion Methods . . . . .	6
C. The Intermittent Shaking Method . . . . .	6
D. Mixers . . . . .	8
E. Colloid Mills . . . . .	9
F. Homogenizers . . . . .	11
G. Energy Consumption in Emulsification . . . . .	12
H. Other Methods of Emulsification . . . . .	13
3. Physico-Chemical Factors Affecting the Formation of Emulsions . . . . .	14
A. Choice of the Emulsifying Agent . . . . .	14
B. Mode of Adding the Emulsifier . . . . .	16
C. Mode of Adding the Two Phases . . . . .	17
D. Time of Agitation . . . . .	18
E. Intensity of Agitation . . . . .	21
F. Temperature . . . . .	22
4. Studies on Model Systems for Emulsification . . . . .	23
A. Instability in the Flow of Liquids . . . . .	23
B. Types of Hydrodynamic Instability . . . . .	25
C. Disruption of Interfaces . . . . .	27
D. Disintegration of Jets . . . . .	31
E. Break up of Drops . . . . .	34
F. Statistical Effects of Turbulence . . . . .	39
5. Sonic and Ultrasonic Emulsification . . . . .	43
A. Generators for Sonic and Ultrasonic Power . . . . .	43
B. Mechanics of Ultrasonic Emulsification . . . . .	48
C. General Characteristics of Emulsions Formed by Ultrasonic Methods . . . . .	53
6. Emulsion Formation by Electric Dispersion . . . . .	55
A. Experimental Arrangement . . . . .	55
B. Mechanism of Drop Formation . . . . .	56
C. Preparation of Monodisperse Emulsions . . . . .	57
D. Critique of the Electrical Method of Emulsification . . . . .	59
