Introduction - - - - -	xiv
Translator's preface - - - - -	xxi
Notation and nomenclature - - - - -	xxii
List of symbols - - - - -	xxiv

CHAPTER I

ELEMENTS OF CAPILLARITY

1. Mechanical equilibrium and physico-chemical equilibrium -	1
2. Surface tension - - - - -	6
3. Condition of mechanical equilibrium of a surface - - - - -	8
4. Consequences of Laplace's formula - - - - -	9
5. Equilibrium at a line of contact - - - - -	10
6. Mechanical work done by a capillary system - - - - -	14
7. Note on the definition of the volumes of the two phases - - - - -	14
8. Surface tension of a solid: the contact angle - - - - -	14
9. Dupré's equation and adhesion - - - - -	17

CHAPTER II

MODEL OF A SURFACE: THE DEFINITION OF ADSORPTION AND OF THE ENERGY AND ENTROPY OF SURFACES

1. The real system and a simplified model - - - - -	21
2. The difficulty inherent in the use of a dividing surface - - - - -	24
3. The relative adsorption - - - - -	26
4. Simplified form of the relative adsorption - - - - -	27
5. Direct measurement of the relative adsorption at the free surface of a solution - - - - -	29
6. Relative surface energy and relative surface entropy - - - - -	30
7. The reduced adsorption - - - - -	31
8. Applicability of the model surface - - - - -	31
9. The Gibbs surface model and the change of surface tension with time - - - - -	33

CHAPTER III

THE FIRST PRINCIPLE OF THERMODYNAMICS

1. Choice of variables - - - - -	34
2. Closed systems - - - - -	34

	PAGE
3. Statement of the first principle of thermodynamics for capillary systems - - - - -	35
4. Thermal coefficients - - - - -	36
5. Change of variables - - - - -	37

CHAPTER IV

THE SECOND PRINCIPLE OF THERMODYNAMICS

1. The second principle and the affinity of adsorption - -	40
2. Fundamental equations for a closed system - - -	40
3. Thermal coefficients and derivatives of the entropy - -	41
4. Heat of extension of the surface: Kelvin's equation - -	42
5. Total energy of extension of the surface - - -	43
6. Change of variables - - - - -	44
7. Thermal coefficients in equilibrium displacements involving plane surfaces - - - - -	44
8. The variables T, p, A - - - - -	47
9. Indirect determination of the irreversible heat of adsorption	48
10. Fundamental equations for open systems - - - -	52
11. Choice of variables: alternative free energy functions - -	53

CHAPTER V

FUNDAMENTAL FORMULAE IN INTENSIVE VARIABLES

1. Object of the chapter - - - - -	55
2. Variables determining the surface energy and surface entropy	55
3. Intensive properties of the surface - - - - -	57
4. Change from extensive to intensive variables - - -	58
5. Surface chemical potentials - - - - -	59
6. Fundamental equations for the interphase - - - -	60
7. Fundamental equations in intensive variables - - -	61
8. The surface energy - - - - -	62
9. The differential of the surface tension: generalization of Gibbs' equation - - - - -	62
10. The dynamic surface tension of a solution - - - -	63
11. Bibliography of methods of measuring dynamic surface tension - - - - -	68

CHAPTER VI

EQUILIBRIUM CONDITIONS. APPLICATION OF THE PHASE RULE TO CAPILLARY SYSTEMS. SURFACE FILMS

1. Affinities of adsorption - - - - -	71
2. Conditions for adsorption equilibrium - - - - -	71

	PAGE
3. Surface carrying several surface phases - - - -	72
4. Types of surface: contiguous and non-contiguous surface phases - - - - -	74
5. Variance of a capillary system with curved interfaces -	75
6. Variance of a capillary system with plane interfaces - -	77
7. Systems having both curved and plane interfaces - -	78
8. The physical states of a surface film of a fatty acid - -	79
9. Squeezing out of a floating lens by a surface film - -	81

✓ CHAPTER VII

GIBBS' ADSORPTION EQUATION

✓1. The Gibbs formula and the adsorption Γ - - - -	85
✓2. The Gibbs formula and relative adsorptions - - - -	86
✓3. The adsorption of a gas at the surface of a liquid - -	87
4. Surface tension of a solution measured at constant T and p -	88
5. Comparison of measurements at constant T and p with those at constant T - - - - -	89
6. The relative adsorption at the free surface of water + alcohol mixtures - - - - -	90
7. Experimental test of the Gibbs equation - - - -	92
✓8. Binary solutions in the presence of air - - - -	92
✓9. Surface activity - - - - -	94

✓ CHAPTER VIII

EXTREME VALUES OF SURFACE TENSION: SINGLE SURFACE PHASE AND NO CHEMICAL REACTIONS

1. Variance - - - - -	96
2. Extreme values of the surface tension in isothermal equilibrium displacements: the line $(\delta\sigma)_T = 0$ - - -	96
3. Extreme values of the surface tension in isobaric equilibrium displacements: the line $(\delta\sigma)_p = 0$ - - - -	98
4. The line of uniform composition, or the indifferent line -	99
5. The point of completely uniform composition - - -	100
6. Values of the adsorptions at the point of completely uniform composition - - - - -	100
7. Proof that the line of uniform composition, the line $(\delta\sigma)_T = 0$, and the line $(\delta\sigma)_p = 0$, meet at the point of completely uniform composition - - - -	101
8. Extreme values of the surface tension for displacements at constant T and p . The surface $(\delta\sigma)_{T,p} = 0$ - - -	103
9. Properties of the surface $(\delta\sigma)_{T,p} = 0$ - - - -	104

	PAGE
10. Completely immiscible phases - - - - -	106
11. Extreme values of surface tension and the Gibbs adsorptions	107
12. Anomalous extreme values: the critical concentration for micelle formation - - - - -	

CHAPTER IX

EXTREME VALUES OF THE SURFACE TENSION: GENERAL THEOREMS AND INDIFFERENT STATES

1. Fundamental equations - - - - -	
2. Extreme values of the surface tension in isothermal equilibrium displacements: the line $(\delta\sigma)_T = 0$ - - - - -	
3. Extreme values of the surface tension in isobaric equilibrium displacements: the line $(\delta\sigma)_p = 0$ - - - - -	
4. Extreme values of the surface tension in isothermal, isobaric equilibrium displacements: the surface $(\delta\sigma)_{T,p} = 0$	119
5. The line $(\delta p)_T = 0$: generalization of Saurel's theorem - - - - -	120
6. Indifferent states of a capillary system - - - - -	121
7. Bulk-phase indifference - - - - -	124
8. Properties of the surface $(\delta\sigma)_{T,p} = 0$ - - - - -	125
9. The indifference of capillary systems and the choice of the dividing surface - - - - -	126
10. The use of relative adsorptions - - - - -	127
11. Example of the complete indifference of a divariant system: myristic acid on water with two surface phases - - - - -	127
12. Example of an extreme value of the surface tension caused by the formation of an addition compound which gives rise to a second surface phase - - - - -	130

CHAPTER X

EQUILIBRIUM PROCESSES IN CLOSED CAPILLARY SYSTEMS

1. Extension of Duhem's theorem to capillary systems - - - - -	133
2. Examples - - - - -	135
3. Choice of variables in the study of equilibrium displacements	136
4. Surface transitions of various orders - - - - -	137

CHAPTER XI

THE SURFACE TENSION OF PURE LIQUIDS

1. The microscopic interpretation of the Gibbs surface - - - - -	139
2. Surface tension and the pressure tensor - - - - -	140
3. Surface tension and molecular distribution functions in fluids	142

CONTENTS

	PAGE
4. Surface tension and the partition function - - - -	144
5. Application of the cell model to the calculation of surface tension - - - - -	
6. Discussion of surface tension in the light of the simple cell model - - - - -	149
7. The incomplete-monolayer model - - - - -	152
8. Variation of surface tension with temperature. The formulae of Eötvös and Katayama - - - - -	153
9. Principle of corresponding states and surface tension - -	154
10. The parachor - - - - -	156

CHAPTER XII

SURFACE TENSION OF SOLUTIONS: MIXTURES OF MOLECULES OF SIMILAR SIZE

1. The statistical model - - - - -	158
2. Choice of macroscopic variables - - - - -	158
3. Use of the monolayer model - - - - -	161
4. Surface areas based on the monolayer model - - - - -	164
5. Perfect solutions and ideal solutions - - - - -	165
6. Surface tension of perfect solutions - - - - -	166
7. Surface tension of ideal dilute solutions - - - - -	170
8. Free energy of regular solutions - - - - -	171
9. Composition of the surface phase and the surface tension of a regular solution - - - - -	175
10. Incompatibility of the monolayer model and the Gibbs equation - - - - -	177
11. Extreme values of the surface tension of a regular solution	179
12. Surface tension of the interface between two regular solutions: Antonow's rule - - - - -	182
13. The average potential model - - - - -	186
14. Surface tension according to the average potential model -	188
15. Relation between static and dynamic surface tension - -	189
16. Excess static surface tension according to the average potential model: comparison with experiment - - - - -	

CHAPTER XIII

SURFACE TENSION OF SOLUTIONS: MIXTURES OF MOLECULES OF DIFFERENT SIZES

1. Introduction - - - - -	199
2. Effect of the surface on the configurational term	201
3. The parallel-layer model: athermal solutions -	202

	PAGE
4. The parallel-layer model: non-athermal solutions	204
5. Comparison with experiment - - - -	205

CHAPTER XIV
INSOLUBLE FILMS

1. Gaseous insoluble films - - - - -	
2. Relation between surface pressure of a film and the activity of the substrate in the surface - - - - -	210
3. Surface condensation - - - - -	213

CHAPTER XV

EFFECT OF CURVATURE ON THE EQUILIBRIUM STATE OF A PURE SUBSTANCE

1. Fundamental equations - - - - -	
2. Variation of curvature at constant temperature: effect on the vapour pressure. Kelvin's equation - - - - -	218
3. Capillary condensation - - - - -	222
4. Variation of curvature at constant temperature: effect on the chemical potential - - - - -	227
5. Effect of curvature on the heat of evaporation - - - - -	228
6. Heat of evaporation of a liquid contained in a porous solid	235
7. Variation of curvature at constant external pressure: effect on the equilibrium temperature - - - - -	239
8. Extension to solid particles - - - - -	243
9. Effect of curvature on the triple point - - - - -	244
10. Solidification of a liquid in a porous solid - - - - -	251
11. Effect of curvature on the surface tension of a pure substance	256

CHAPTER XVI

INFLUENCE OF CURVATURE ON THE EQUILIBRIUM STATE OF A MIXTURE

1. Fundamental equations - - - - -	
2. Effect of curvature on the partial pressures of the components of a liquid droplet of given composition at constant temperature - - - - -	
3. Particular case: influence of curvature on the partial pressure of a pure liquid in a mixture of insoluble gases at constant total gas pressure and constant temperature - - - - -	261
4. Drop containing a non-volatile component. Stability of a drop of salt solution - - - - -	

5. Experiments of La Mer and Gruen - - - - -	266
6. Gas bubble in a liquid of given composition at a given temperature - - - - -	268
7. General equation for the effect of changing curvature at constant temperature - - - - -	
8. Effect of curvature of a droplet on the pressure at which a vapour mixture of given composition, at constant temperature, condenses on it - - - - -	
9. Effect of particle size on solubility of solids - - - - -	
10. Coexistence of ice, water vapour and pure liquid water in the presence of air - - - - -	
11. Effect of size on equilibrium between a floating globule and a surface film - - - - -	274
12. Change of azeotropic composition with surface curvature	277
13. Effect of particle size on equilibrium of a heterogeneous chemical reaction - - - - -	280
14. Effect of curvature on the surface tension of a mixture -	284

CHAPTER XVII.

SURFACE TENSION OF CRYSTALS

1. Introduction - - - - -	286
2. Surface tension of a crystal face - - - - -	289
3. Geometric variables which define the size and shape of a crystal - - - - -	290
4. Equilibrium shape of a crystal - - - - -	292
5. Extreme values of the function $\Sigma \sigma^{\gamma} A^{\gamma}$ - - - - -	297
6. Chemical potential and vapour pressure of a small crystal -	300
7. Case in which the pressure tensor in the crystal reduces to an isotropic pressure - - - - -	301
8. Mechanical aspects of the surface tension of a crystal face -	303
9. Origin of the state of tension of the interface - - - - -	307
10. Bibliography - - - - -	309

CHAPTER XVIII

THE ROLE OF NUCLEI IN THE INITIATION OF PHASE TRANSITIONS

1. Introduction - - - - -	310
2. Properties of the droplet-phase or the crystal-phase. Definition of the critical nucleus - - - - -	313
3. Free energy of formation of a droplet-phase - - - - -	319
4. Special case in which the droplet phase is a pure component	320
5. Special case of crystal nuclei - - - - -	322

	PAGE
6. The macromolecular embryo: embryos considered as polymers in statistical equilibrium with monomer in the bulk phase - - - - -	323
7. Entropy of mixing of embryos - - - - -	325
8. Comparison of the separate-phase embryo and macromolecular embryo models - - - - -	325
9. Equilibrium population of embryos in a liquid bulk phase -	327
10. Case of gaseous bulk phase - - - - -	328
11. The appearance of critical nuclei and the phenomenon of nucleation - - - - -	329
12. The two modes of nucleation - - - - -	331
13. Kinetics of nucleation - - - - -	332
14. Experimental study of nucleation in liquids - - - - -	335
15. Calculation of the mean freezing point of water droplets -	337
16. Calculation of the surface tension at the ice/water interface from the freezing point of droplets - - - - -	339
17. Ostwald's rule and iso-nucleation curves - - - - -	340
18. Two-component embryos and critical nuclei - - - - -	341
19. Nuclei at a liquid/liquid interface - - - - -	342
20. Nuclei at a liquid/solid or vapour/solid interface - - - -	345

CHAPTER XIX

CALCULATION OF THE SURFACE TENSION UNDER NON-EQUILIBRIUM CONDITIONS FOR THE MONOLAYER MODEL

1. Introduction - - - - -	349
2. Calculation of the pure dynamic surface tension - - -	351
3. Pure dynamic surface tension of regular solutions and perfect solutions - - - - -	
4. Pure dynamic surface tension of solutions of molecules of different sizes - - - - -	
5. Difficulties inherent in the calculation of intermediate dynamic surface tensions - - - - -	356
6. Regular solutions and perfect solutions - - - - -	357
7. Molecules of different sizes - - - - -	358
8. Application to the system water + sebacic acid - - - -	361

CHAPTER XX

THE MULTIPLE LAYER MODEL OF A SURFACE

1. Introduction: the necessity for a thermodynamic model more general than the monolayer model - - - - -	363
2. Autonomous and non-autonomous phases - - - - -	365
3. The free energy of contact - - - - -	366

	PAGE
4. Properties of the free energy of contact - - - -	368
5. Cross chemical potentials at a surface of discontinuity -	370
6. The surface of a liquid treated as a multilayer transition region	370
7. Homogeneity of the function F' - - - -	372
8. Free energy of the surface region and a generalization of the Gibbs equation - - - -	373
9. Particular case of equilibrium - - - -	375
10. Choice of limits of the surface layer - - - -	375
11. Comparison with the Gibbs equation - - - -	377
12. Detailed study of the surface layers and the interfaces between them - - - -	378
13. Properties of the external layers - - - -	380
14. Pure dynamic surface tension - - - -	382
15. Pure dynamic surface tension and the free energy of contact of the interface - - - -	384
16. Pure dynamic surface tension of a regular solution - -	384
17. Comparison with the Gibbs surface model - - - -	386

CHAPTER XXI

ADSORPTION OF ELECTROLYTES: ELECTROCAPILLARY SYSTEMS

1. Thermodynamics of a closed electrocapillary system -	390
2. Extension to open systems - - - -	392
3. Plane interphase between two electrically conducting phases in equilibrium - - - -	394
4. Possibility of a thermodynamic study of a partial system limited by a cylindrical surface normal to the interface -	395
5. Homogeneity parallel to the surface - - - -	396
6. Equilibrium in systems where each component can be present in all surface layers - - - -	
7. Adsorption of a completely dissociated salt at a water/air interface - - - -	400
8. Adsorption of a partially dissociated 1 : 1 electrolyte -	401
9. General case of a partially dissociated polyvalent electrolyte	402
10. The potential difference $\varphi^I - \varphi^{II}$ in the case of true equilibrium	404
11. Surface of an ideal polarized electrode - - - -	405
12. Effect of concentration changes - - - -	410
13. Effect of adsorbed substances on the shape of the electrocapillary curve - - - -	
Bibliography - - - -	414
Index of Authors - - - -	416
Index of Subjects - - - -	421
