DE BOER AND THE INORGANIC AND PHYSICAL CHEMISTRY .	xiii
DE BOER AND HETEROGENEOUS CATALYSIS	xix

I Studies on Pore Systems in Adsorbents and Catalysts

J. C. P. BROEKHOFF AND B. G. LINSEN

I Introduction	1
II Surface Area and Pore Structure :	4
III Origin of Pores	5
IV Historical Survey of the Development of Pore Size Distribution Calculations	7
V Adsorption of Nitrogen on Non-porous Solids	18
VI The Influence of Adsorption on Capillary Condensation and Evaporation	34
VII Application to the Calculation of Pore Size Distribution	46
References	59

2 Mobility and Adsorption on Homogeneous Surfaces. A Theoretical and Experimental Study

J. C. P. BROEKHOFF AND R. H. VAN DONGEN

I Introduction	63
II The Two-Dimensional State	66
III Models for the Two-Dimensional State and their Respective Adsorption Equations	71
IV Interpretation of Adsorption Data on Adsorbents with Energetically Homogeneous Surfaces	113
V Surface Area Determination	132
VI Concluding Remarks	140
References	143

3 Some Recent Applications of the Calculation of the Entropy of the Adsorbed Phase According to de Boer

J. J. F. SCHOLTEN AND S. KRUYER

I	Introduction	147
II	Calculation of the Entropy of Adsorbed Molecules	148
III	Adsorption of N_2O_4 on Silica	150
IV	Strong Physical Adsorption of Nitrogen on Nickel	153
V	The Mobility of Nitrogen Chemisorbed on a Singly-promoted Iron Catalyst	158
VI	The Entropy and Mobility of Nitrogen and Carbon Monoxide Adsorbed on Alumina	163
VII	Concluding Remarks	166
	References	168

4 Active Alumina

B. C. LIPPENS AND J. J. STEGGERDA

I	Introduction	171
II	Aluminium Hydroxides	173
III	The Formation and the Crystal Structure of Active Aluminas	185
IV	The Porous Texture of Aluminas	194
V	The Surface Structure of Alumina	203
	References	208

5 Porous Silica

C. OKKERSE

I	Introduction	213
II	Polycondensation of Silicic Acid	215
III	Relation Between the Texture of Porous Silica and the Conditions of its Preparation	223
IV	Stability of Porous Silica in Aqueous Media	237
V	Surface Structure of Porous Silica	248
	References	262

6 Active Magnesia

W. F. N. M. DE VLEESSCHAUWER

I	Introduction	265
II	Principles of the Activation Method	266
III	Active Magnesia Prepared from Magnesite	268

IV	Active Magnesia Prepared from Nesquehonite	284
V	Effect of Calcination Parameters on Texture and Decomposition Route	300
VI	Catalytic Aspects of Magnesia for Alcohol Decomposition	305
	References	314

7 Formation, Preparation and Properties of Hydrous Zirconia

H. TH. RIJNTEN

I	Introduction	316
II	The General Chemistry of Zirconium	316
III	A Literature Survey on the Behaviour of Zirconyl Solutions	319
IV	Studies on Hydrolysis and Polymerization	324
V	Conductivity Measurements in $ZrOCl_2$ Solutions	328
VI	Preparation of Hydrous Zirconia	346
VII	Characterization of Hydrous Zirconia	350
VIII	Preparation of $ZrO(OH)_2$ from Decomposition of $ZrOCl_2 \cdot 8H_2O$	363
	References	371

8 Hydrolytic Phenomena in U(VI)-Precipitation

M. E. A. HERMANS

I	Introduction	373
II	The Hydrolysis of Uranyl Ions	375
III	The Application of Hydrolytic Processes for Solids Formation	390
IV	Texture and Thermal Reactivity of Precipitates and Gels	412
	References	423

9 The Texture and the Surface Chemistry of Carbons

TH. VAN DER PLAS

I	General Introduction	425
II	The Texture of Carbons	430
III	The Surface Chemistry of Carbon	455
IV	General Conclusions	465
	References	467

10 Structure and Activity of Silica-Supported Nickel Catalysts

J. W. E. COENEN AND B. G. LINSEN

I	Introduction	472
II	Structure of the Unreduced Catalyst	473
III	Phase Composition of the Reduced Catalyst	480
IV	Crystallite Size and Lattice Parameter of fcc Nickel in the Catalysts	489
V	Nickel Surface Area Determination by Adsorption Methods	494
VI	Other Types of Nickel on Silica Catalysts	500
VII	Relation Between the Total Surface Area and the Nickel Surface Area	50
VIII	Preliminary Activity Determinations and Correlation with Structure	50
IX	Further Characterization of the Catalyst Texture in Connection with Mass Transport	509
X	Conclusions	523
	References	524

11 Interaction of Oxygen with Tungsten and Molybdenum Surfaces

J. W. GEUS

I	Introduction	529
II	The Extent of the Oxygen Sorption	532
III	Heats of Oxygen Sorption	538
IV	Flash-desorption Experiments	543
V	Effects of Oxygen sorption on the Work Function of Tungsten and Molybdenum	
VI	Effects of Oxygen Sorption on the Electrical Conductance of Evaporated Tungsten and Molybdenum Films	570
VII	Desorption of Oxygen by Slow Electron Impact	587
VIII	LEED Investigation of Oxygen Sorption on Tungsten and Molybdenum	601
IX	Conclusions	623
	References	626
