

CONTENTS

Preface	v
Chapter 1 ✓	THE PHYSICS OF SURFACES
Conditions at a phase boundary	1
The tension within a liquid surface	4
Kinetics of molecules in the surface	5
Vapour pressures over curved surfaces	7
Excess pressures inside bubbles	9
Solubility from small droplets	10
Surface tension and curvature	11
Total surface energy	11
Surface entropy	12
Molecular theories of surface energy	12
Interfacial tension	16
Interfacial entropy	18
Cohesion and adhesion	19
Spreading	20
Spreading of one liquid on another	20
Kinetics of spreading	25
Spreading from solids	29
Relations between surface tensions and interfacial tension	30
Treatment of Gibbs	30
Antonoff's relationship	31
Drops of oils on water	33
Contact angles — ↘	34
Theory	34
Magnitude of contact angles of liquids on solids	36
Spreading coefficients of liquids on solids	39
Adhesion of liquids to solids	40
De-wetting by surface-active agents	41
Contact between two liquids and a solid	41
Measurements of surface and interfacial tension ↗	42
The ring method	42
The drop-weight method	44
The Wilhelmy plate method	46
The pendant drop method	47

CONTENTS

Other methods	47
Differential measurements	47
Experimental studies of solid-liquid interfaces	47
The plate method for obtaining θ	47
Other methods for obtaining θ	48
The "wetting balance" method for finding θ , W and negative S	49
The sessile drop method for negative S values	49
Direct measurement of positive S values	50
Indirect measurement of positive S values	52
Adhesion energies	52
References	52
Chapter 2 ELECTROSTATIC PHENOMENA	
Introduction	56
Distribution potentials	59
Diffusion potentials	62
Miscellaneous experimental results	63
Interfacial and surface potentials	64
Components of ΔV due to a monolayer	70
Calculation of ψ near the surface from the equations of Gouy	75
Corrections to the Gouy equation	79
Calculation of ψ near the surface from the equations of Donnan	80
Specific adsorption—reversal of charge	84
Specific adsorption—the Stern theory	85
Position of polarized counter-ions at a liquid surface	90
Relation of ψ_δ and ζ	92
Position of counter-ions held in a liquid surface by van der Waals forces	93
Film properties and ψ_0	93
The pH near a charged surface	94
Weakly ionized monolayers	95
Electrocapillary curves	96
Electrical capacity of the double layer	101
References	105
Chapter 3 ELECTROKINETIC PHENOMENA	
Surface conductance	108
Experimental methods	111

Electro-osmosis	114
Streaming potentials	118
Streaming currents	122
Flow through fine pores and ζ	125
Electrophoresis	129
Experimental methods	133
Applications of electrophoresis	135
Sedimentation potentials	137
Retardation of settling velocity and ζ	139
Influence of surface roughness on ζ	140
The ratio ζ/ψ	140
Experiments on ξ in relation to ψ_0	144
Freedom of the counter-ions	146
Origin of charges on surfaces	147
Spray electrification	149
Freezing potentials	149
References	151

Chapter 4 ↗ ADSORPTION AT LIQUID INTERFACES

Adsorption processes	154
Inter-chain cohesion and desorption energies	156
The oil-water interface	158
Polar groups and desorption energies	159
Surface concentrations	160
Fluorinated compounds	160
Measurement of adsorption	161
Thermodynamics of adsorption and desorption	161
Aqueous solutions and the air-water surface	162
Aqueous solutions and oil-water interfaces	163
Oil solutions and the oil-water interface	163
Organic vapours and the air-water surface	163
The vapour-mercury surface	164
Adsorption kinetics	165
Experiments on rates of adsorption at the air-water surface	168
Experiments on rates of adsorption at the oil-water interface	173
Desorption kinetics	177
Net rates of adsorption or desorption	182

CONTENTS

Adsorption equations for non-electrolytes	183
Adsorption equations for long-chain ions	186
Calculation of B_1/B_2	189
Explicit isotherms for adsorption at the oil-water interface	189
Adsorption in the absence of salts	189
Adsorption from salt solutions	191
The Temkin isotherm	192
Surface equations of state from adsorption isotherms	193
The linear isotherm	193
The Langmuir isotherm (un-ionized films)	193
The Küster isotherm	194
Relations between surface pressure and concentration	195
The Gibbs equation	196
Derived equations for the air-water surface	197
Checking the derived equations for the air-water surface	201
Derived equations for the oil-water interface	210
Checking the derived equations for the oil-water interface	210
Adsorption in an electric field	213
References	214

Chapter 5 **PROPERTIES OF MONOLAYERS**

Introductory	217
Surface pressure	218
Experimental methods of spreading films at the air-water surface	218
Experimental methods of measuring Π at the air-water surface	220
Experimental methods of spreading films at the oil-water interface	222
Experimental methods of measuring Π at the oil-water interface	224
Types of force-area curve	225
"Gaseous" films	227
Cohering films	230
Charged films	231
"Liquid expanded" films	234
"Condensed" films	234
Values of A ,	234
Other films	235
Molecular complexes	235
Partial ionization of surface films	237
Equilibrium in films	239
Films of polymers	240

CONTENTS

Surface viscosity	251
Drag of a monolayer on and by the underlying water	252
Insoluble monolayers (A/W): the canal method	253
Insoluble or soluble monolayers (A/W): rotational torsional methods	255
Insoluble or soluble monolayers (A/W): the "viscous traction" method	257
Insoluble or soluble monolayers (A/W or O/W): the generalized "viscous traction" instrument	260
Viscosities of insoluble films	261
Viscosities of adsorbed films	263
Compressional moduli of monolayers	265
The elimination of waves and ripples	266
Shear elastic moduli of monolayers	275
Yield values of monolayers	276
Diffusion in monolayers	(277)
Fibres from monolayers	277
References	278

Chapter 6 **REACTIONS AT LIQUID SURFACES**

Reactions in monolayers	(282)
Rate constants	(282)
Experimental methods	283
Steric factors	284
Electrical factors	288
Reactions in emulsions	293
Complex formation in monolayers	294
Penetration into monolayers	295
Thermodynamics of penetration	297
Penetration from the vapour phase	298
References	299

Chapter 7 **MASS TRANSFER ACROSS INTERFACES**

Introductory	301
Evaporation	303
Solute transfer at the gas-liquid surface	308
Surface instability	309
Theoretical values of R_G	311

CONTENTS

Theoretical values of R_L	311
Experiments on static systems	313
Experiments on dynamic systems	314
Solute transfer at the liquid-liquid interface	319
Interfacial instability	322
Theoretical values of R_L	327
Experiments on static systems	328
Experiments on dynamic systems	330
Practical extraction columns	337
Distillation	339
References	339
Chapter 8 / DISPERSE SYSTEMS AND ADHESION	
Introductory	343
Collision rates in disperse systems	344
Aerosols	347
Dispersion methods	347
Condensation methods	347
Kinetics of nucleation of a supercooled vapour	349
The stability of aerosols	355
Evaporation of aerosol droplets	358
Accelerated removal of aerosols	358
Emulsions	359
Spontaneous emulsification	360
Tests of mechanism of spontaneous emulsification	365
The stability of emulsions	366
Electrical barriers	367
Hydration barriers — "deep surfaces"	369
Coalescence of drops — stability	370
Emulsion type	371
Clumping of emulsion droplets	383
Breaking of emulsions	383
"Creaming" of emulsions	385
Solids in liquids	386
Electrical barriers	390
Long-range attraction	391
Criteria of stability	392
Electrical effects in non-aqueous systems	393
Solvation barriers	393

CONTENTS

Weak aggregation	393
Gases in liquids	393
Foams	395
Factors determining foam stability	398
Summary of causes of foam stability	412
Foam stabilizing additives	413
Destruction of foam—foam "breakers" or "killers"	415
Anti-foaming agents—foam inhibitors	416
Closed shells of fluids	416
Detergency	418
Flotation of minerals	421
Modification of the habits of crystals	422
Liquids in fine pores	423
Adhesion	426
The stickiness of particles, droplets and cells	429
Sliding friction	431
Lubrication	431
Structure of the lubricating layer	432
Mechanism of boundary lubrication	433
Extreme pressure lubricants	434
The friction of plastics	434
Rolling friction	435
Wetting	435
Non-wetting	436
References	442
Principal Symbols	451
Author Index	457
Subject Index	468
