Introduction

Particulate Properties	2
Interfacial Properties	2
Stability of Dispersed-Phase Systems	3
Definitions and Glossary of Terms	3

PART I. PARTICULATES

CHAPTER I.A.	Optical Properties—Light Scattering	9
CHAPTER I.B.	Kinetic Properties—Rheology	14
	1. Classification of Flow	14
	a. Newtonian Flow	14
	b. Plastic Flow	17
	c. Shear Thinning	19
	d. Dilatancy	20
	e. Thixotropy	20
	f. Units and Dimensions	21
	2. Instruments to Measure Viscosity	21
	a. Capillary Viscosimeters	21
	b. Coaxial Cylindrical Rheometers	23
	c. Cone-and-Plate Rheometers	23
	d. Viscoelastometers	25

CHAPTER I.C. Statistical Properties	26
1. Brownian Motion	26
2. Colligative Properties	27
3. Fractals	27
CHAPTER I.D. Size and Surface Area	
1. Particle-Sizing Techniques for Coarse Particles ($2\mu\text{m}$ and above)	33
a. Optical Microscope	33
b. Sieves	34
c. Elutriators, Impactors, and Cyclones	36
d. Hegman Fineness-of-Grind Gauge	37
e. Diffraction	38
2. Particle-Sizing Techniques for Fine Particles ($0.5\text{--}2\mu\text{m}$)	39
a. Sedimentation	39
b. Individual Particle Sensors	41
c. Mercury Porosimetry	43
3. Particle-Sizing Techniques for Ultrafine Particles ($<0.5\mu\text{m}$)	43
a. Transmission and Electron Microscopes	43
b. Turbidity	44
c. Laser Light Scattering	45
d. Quasi-Elastic Light Scattering	46
e. Centrifugation	47
f. Hydrodynamic Chromatography	48
g. Sedimentation Field-Flow Fractionation	49
4. Surface Area by Adsorption	50
a. Physical Adsorption	50
b. Adsorption from Solution	53
CHAPTER I.E. Processing Methods for Making Emulsions and Suspensions	56
1. High-Shear Mills	59
2. Impact Mills	60
3. Chemical Processing Aids	63
References for Part I	64

PART II. INTERFACES

CHAPTER IIA. Capillarity of Pure Liquids	69
1. Molecular Theory of Surface Tension	69
2. Molecular Theory of Interfacial Tension	73

3.	Dispersion Force Contributions to Interfacial Tension	74
4.	Acid-Base Contributions to Interfacial Tension	78
5.	Thermodynamics of Surfaces and Interfaces	81
a.	Coalescence of Droplets	83
b.	Spreading of One Liquid on Another	84
c.	Encapsulation of One Liquid by Another	84
d.	Works of Adhesion and Cohesion	86
e.	Free Energy of Emersion	87
6.	Thermodynamics of Liquids in Contact with Solids	87
7.	Degrees of Liquid-Solid Interaction	91
8.	Dispersion Energies of Solid Substrates	92
9.	Floating Particles	98
10.	Initial and Final Spreading Coefficients	99
11.	Determination of Spreading Pressure by Adsorption Techniques	103
12.	Dynamics of Initial Spreading	104
13.	Thermodynamics of Curved Interfaces	105
14.	Sessile and Pendent Drops	107
15.	The Kelvin Equation	109
16.	Capillary Flow and Marangoni Flow	110
17.	Methods to Measure Surface and Interfacial Tension	113
a.	Capillary Height	113
b.	Drop Weight	114
c.	Wilhelmy Plate	114
d.	The Du Noüy Ring	114
e.	Sessile and Pendent Drop	115
f.	Maximum Pull on a Rod	116
g.	Maximum Bubble Pressure	117
h.	Spinning Drop	118
i.	Vibrating Jet	118
18.	Methods to Measure Contact Angle	118
a.	Goniometer	119
b.	Interfacial Meniscus	119
c.	Fiber Balance	119
d.	The Bartell Cell	121
e.	The Washburn Equation	121
19.	Contact Angles on Irregular Surfaces	122
20.	The Jamin Effect	125

CHAPTER II.B. The Relation of Capillarity to Phase Diagrams

1. Introduction 126
2. Regular Solution Theory 128

Surface-Active Solutes

1. Introduction 132
2. Range of Solutes from Lipophilic to Hydrophilic 133
3. Types: Anionic, Cationic, and Nonionic

HAPTER II.D. Physical Properties of Insoluble Monolayers

1. Observations 139
2. Viscoelasticity of Insoluble Monolayers 145
3. Built-up Films: Langmuir-Blodgett Films 146

IAPTER II.E. Aqueous Solutions of Surface-Active Solutes

1. Adsorption 148
2. Lundelius' Rule and the Ferguson Effect 149
3. Micellization and Solubilization 151
 - a. Spontaneous Association 151
 - b. Methods to Determine Critical Micelle Concentration 152
 - c. Equilibrium or Phase Separation? 154
 - d. Effects of Varying Molecular Structure 156
 - e. Solubilization by Micelles (Microemulsions) 161
4. The Krafft Point 164
5. Dynamic Surface Tensions 165
6. Elasticity of Surface Films 167
7. Ultralow Dynamic Surface Tension 170
8. Theories of Rate of Bubble Rise in Viscous Media 170
 - a. Rise in Pure Liquids—Hadamard Regime 171
 - b. Effect of Surface-Active Solutes—Stokes Regime 171
9. Phase Behavior of Surface-Active Solutes

CHAPTER II.F. Surface Activity in Nonaqueous Media

CHAPTER II.C. Thermodynamics of Adsorption from Solution

1. The Gibbs Adsorption Isotherm 180
 - a. Two-Component Systems 182
 - b. Three-Component Systems 184
2. The Surface Tension Isotherm 187
3. Adsorption Isotherm: Langmuir 188
4. Equation of State: Frumkin 189
5. Standard-State Free Energies 190
6. Traube's Rule 193

References for Part II

PART III STABILITY OF DISPERSIONS

CHAPTER III.A. Forces of Attraction

1. Forces of Attraction between Molecules 205
2. Forces of Attraction between Particles 209
 - a. Molecular Approach—Hamaker Theory 210
 - b. Molar Approach—Lifshitz Theory 216
3. Other Methods to Obtain Hamaker Constants 223
 - a. Direct Measurements of Forces of Attraction 223
 - b. Indirect Measurements of the Forces of Attraction 224
4. Values of Hamaker Constants for Some Common Materials 227

CHAPTER III.B. Forces of Repulsion

1. Electrostatic Repulsion 229
 - a. Origin of Charge in Aqueous Systems 229
 - b. Gouy–Chapman Theory 232
 - c. Stern Theory 236
2. Analysis of Interacting Planar Double Layers
 - a. The Langmuir Approximation 239
 - b. The Debye–Hückel Approximation 242
3. Analysis of Interacting Spherical Double Layers 243
 - a. The Derjaguin Approximation 244
 - b. The Debye–Hückel Approximation 245
 - c. Constant Surface Charge Density 246

CHAPTER III.C Stability of Systems

1. Electrostatic and Lyocentric Dispersions 247
2. Electrostatic Repulsion versus Dispersion Force Attraction 248
 - a. DLVO Theory: Two Flat Plates 248
 - b. DLVO Theory: Two Equal Spheres of Radius a 249
3. Applications of DLVO Theory to Dispersions 249
4. Colloid Stability and Complex Ion Chemistry 252

CHAPTER III.D. Kinetics of Coagulation

255

References for Part III

260

PART IV. DISPERSED-PHASE SYSTEMS

CHAPTER IV.A. Emulsions

267

1. Definitions and Glossary of Terms 267
2. Determination of Emulsion Type 268
3. Coalescence of Emulsion Droplets 268
4. Bancroft's Rule 269
5. Amphiphilic Particles as Emulsion Stabilizers 271
6. The HLB Scale 273
7. The Phase-Inversion Temperature 276
8. Mechanical Properties of the Interface 277
9. Variation with Concentration of Internal Phase 279
 - a. Rheology of Emulsions 281
 - b. Electrical Conductivity of Emulsions 283
10. Measurement of Emulsion Stability 285
11. Making Emulsions 286
 - a. The Method of Phase Inversion 286
 - b. Phase-Inversion Temperature (PIT) Method 287
 - c. Condensation Methods 287
 - d. Intermittent Milling 287
 - e. Electric Emulsification 287
 - f. Special Methods 288

- 12. Breaking Emulsions 288
 - a. Mechanical Demulsification 288
 - b. Thermal Demulsification 289
 - c. Chemical Demulsification 289
- 13. Microemulsions and Miniemulsions
- 14. Emulsion Polymerization 293

CHAPTER IV.B. Foams

294

- 1. Properties of Foams 294
- 2. Geometry of Bubbles and Foams 295
- 3. Equation of State of Foam 296
- 4. Theories of Foam Stability 298
 - a. Thermodynamic Stability 298
 - b. Marangoni-Gibbs-Rayleigh Theory 300
 - c. The Marangoni Effect 300
 - d. Stresses on Foams 301
 - e. Elasticity of Lamellae 302
 - f. Enhanced Viscosity or Rigidity 304
 - g. Black Films 307
 - h. Influence of Liquid-Crystal Phases 307
 - i. Mutual Repulsion of Overlapping Double Layers 310
 - j. Effect of Dispersed Particles on Foam Stability 310
 - k. Foaminess and Phase Diagrams 311
 - l. Summary of Foam Stabilization 314
- 5. Mechanisms of Antifoaming Action 314
 - a. Impairment of Foam Stability 314
 - b. Surface and Interfacial Tension Relations
 - c. Foam Inhibition—Aqueous Systems 317
 - d. Compounded Foam Inhibitors 318
 - e. Silicone Foam Inhibitors 319
 - f. Hydrophobic Particles 320
- 6. Methods of Measuring Foam Properties 322
 - a. Stability 322
 - b. Surface Rheology 325

CHAPTER IV.C. Suspensions

327

- 1. Adsorption from Solution by Solids 327
 - a. Acidic or Basic Character of Solid Substrates 328
 - b. Nonaqueous Media 330
 - c. Aqueous Media 332
 - d. Rates of Adsorption on Solid Surfaces 333

	Solution Adsorption Isotherm	334
	Adsorption of Dyes	338
4.	Experimental Techniques for Suspensions	339
	a. Flocculated and Deflocculated Suspensions	339
	b. Sedimentation Rates and Volumes	340
	c. Adsorption at the Solid-Liquid Interface	342
	d. Surface Tension Titrations	343
	e. Rheology	344
	f. Electrical Properties in Aqueous Media	346
	g. Electrical Properties in Nonaqueous Media	350
5.	Polymer Stabilization of Suspensions	354
6.	Electric Effects in Dry Suspensions	360
7.	Flocculation of Suspensions	363
8.	Nucleation and Crystal Growth	364
9.	Model Colloidal Systems	366
	a. Particles of Uniform Size	367
	b. Surfaces of Uniform Composition	370
10.	Some Special Dispersions	372
	References for Part IV	374
	Bibliography	385
	Appendices	391
APPENDIX A.	Physical Constants	393
APPENDIX B.	Units	394
APPENDIX C.	Mathematical Formulas Used in Text	395
APPENDIX D.	Electrostatic and Induction Contributions to Intermolecular Potential Energies	396
APPENDIX E.	Electric Properties of Representative Molecules	397
APPENDIX F.	Lifetimes of Contributors to Colloid and Interface Science	398
APPENDIX G.	Kendall Awardees	402
