

## CONTENTS

	PAGE
Preface.....	v
Elmer O. Kraemer—A Biography.....	xiii
Introduction. By G. STAFFORD WHITBY, Akron, Ohio.....	xxv
Second-Order Transition Effects in Rubber and Other <b>High</b> Polymers. By R. F. BOYER and R. S. SPENCER. Midland, Michigan.....	1
I. Introduction.....	2
II. Some Experimental Results on Second-Order Transitions in Rubber....	6
1. Volume-Temperature Curves.....	6
2. Heat Capacity Measurements.....	8
3. Crystallinity and Second-Order Transitions.....	12
4. Compressibility.....	13
5. Thermal Conductivity.....	13
6. Modulus of Elasticity.....	16
7. Refractive Index.....	16
8. Dielectric Properties.....	17
III. Factors Influencing Second-Order Transition Temperature as Determined by Thermal Expansion.....	21
1. Effect of Orientation.....	21
2. Time Effects.....	22
3. Molecular Weight.....	23
4. Vulcanization.....	24
5. External Forces.....	26
6. Copolymerization.....	26
7. Plasticizers.....	27
IV. The Brittle Point.....	31
1. Survey of Brittle Point Tests.....	31
2. Theory of the Brittle Point Tests.....	35
Effect of Molecular Weight on $T_b$ .....	37
Effect of Vulcanization and Plasticizer.....	39
Effect of Fillers.....	40
3. Some Experimental Results Illustrating the Theory of the Brittle Point Test.....	40
Effect of Molecular Weight.....	41
Effect of Vulcanization.....	43
Effect of Plasticizers.....	44
Effect of Fillers.....	45
4. Young's Modulus of Unstretched Rubber.....	46

V. Summary.....	48
Bibliography.....	51
<b>Crystallization</b> Phenomena in Natural and Synthetic Rubbers. By LAWRENCE	
A. WOOD. National Bureau of Standards.....	57
I. Introduction.....	58
II. Methods of Study.....	59
1. Specific Volume.....	59
2. Thermal Measurements.....	60
3. X-Ray Diffraction.....	60
4. Optical Double Refraction.....	61
5. Light Transmission.....	61
6. Mechanical Properties.....	62
Modulus.....	62
Hardness.....	62
Flow and Creep.....	63
III. General Characteristics of Crystallization.....	63
1. Rate of Crystallization.....	63
2. Melting of Crystals.....	66
3. Change of Melting Range with Temperature of Crystallization...	68
4. Recrystallization.....	71
5. Effects of Crystallization on Mechanical Properties.....	71
6. Fraction of Material in the Crystalline State.....	73
7. Effects of Vulcanization on Crystallization.....	75
8. Size of Crystallites.....	77
IV. Materials Studied.....	78
1. Natural Rubber.....	78
2. Balata and Gutta-percha.....	78
3. Chloroprene Polymers (Neoprene).....	79
4. Organic Polysulfide Polymers (Thiokol).....	80
5. Isobutene Polymers and Copolymers (Vistanex and Butyl Rubber).....	80
6. Polyethylene (Polythene).....	81
7. Vinylidene Chloride Polymers and Copolymers (Saran).....	81
8. Butadiene Polymers and Copolymers.....	82
9. Noncrystallizable Polymers.....	82
10. Other Materials.....	83
V. Interpretation of Experimental Results.....	83
1. Kinetics of Crystallization.....	83
2. Range of Melting.....	85
3. Change of Melting Range with Temperature of Crystallization...	87
4. Nature of Crystals.....	87
Bibliography.....	88
The Study of Rubberlike Substances by X-Ray Diffraction Methods. By C. W. BUNN, Northwich, England.....	95
I. The Rubberlike State.....	95
II. The Crystal Structures of Rubberlike and Related Polymers.....	98

1. Methods and Limitations.....	98
2. The Polyisoprene Group—Gutta-percha, Rubber and Polychloroprene.....	105
Gutta-percha.....	106
Structure of $\beta$ -Crystals.....	106
a-Gutta-percha.....	111
Rubber.....	111
Polychloroprene.....	116
3. Butadiene Polymers.....	117
4. Rubber Hydrochloride.....	118
5. Polyethylene.....	119
6. Polyvinyl Alcohol.....	121
7. Other Polyvinyl Compounds.....	123
8. Polyisobutene.....	125
9. Polyesters.....	128
10. Other Rubberlike Substances.....	131
III. Molecular Structure and Physical Properties.....	132
1. The Polyisoprene Group.....	134
2. Rubber Hydrochloride.....	136
3. Polyethylene.....	136
4. Polyisobutene.....	136
5. Polyesters.....	137
IV. Studies of Crystallization and Orientation.....	138
Bibliography.....	141
The Thermodynamic Study of Rubber Solutions and Gels. By GEOFFREY GEE, Welwyn Garden City, Herts., England.....	145
I. Introduction.....	145
II. Experimental Study of Thermodynamics of Rubber Solutions.....	147
1. Vapor Pressures of Rubber Solutions and Gels.....	147
2. Swelling Pressure.....	150
3. Osmotic Pressure.....	151
4. Cryoscopic Measurements.....	153
5. Free Energy of Dilution.....	154
6. Heat of Dilution.....	155
III. Statistical Calculations.....	156
1. Entropy of Mixing.....	156
2. Heat and Free Energy of Mixing.....	162
IV. Comparison of Theory and Experiment.....	165
V. Applications of Thermodynamics to Specific Problems.....	169
1. Molecular Weight of Rubbers from Osmotic Data.....	169
Micellar Theory of Rubber Structure.....	173
2. Solubility of Rubbers in Different Liquids.....	174
3. Limited Swelling of Rubbers in Liquids.....	179
4. Solubility of Solids in Rubbers.....	188
5. Fractionation of Rubber.....	190
6. General Conclusions.....	193
Bibliography.....	194

Significance of Viscosity Measurements on Dilute Solutions of High Polymers. By R. H. EWART, Passaic, N. J.....	197
I. Introduction.....	197
II. General Characteristics of Viscous Flow.....	199
III. Experimental Results of Viscosity Measurements.....	207
IV. Determination of Molecular Weights of High Polymers.....	216
1. End-Group Determinations.....	218
2. Cryoscopic Determination.....	218
3. Osmotic Pressure.....	219
4. Ultracentrifugal Studies.....	224
5. Light Scattering by High-Polymer Solutions.....	226
V. Relation between Solution Viscosity and Molecular Weight.....	228
1. Linear Relationships.....	228
2. Nonlinear Relationships.....	233
3. Discussion of Results.....	239
VI. Theoretical Treatment of Viscosity.....	239
1. Dependence of Intrinsic Viscosity on Particle Shape.....	242
2. Dependence of Viscosity on Swelling.....	244
Bibliography.....	249
 The Kinetic Theory of Rubber Elasticity. By E. GUTH, H. M. JAMES and H. MARK, University of Notre Dame, Purdue University and Polytechnic Insti- tute of Brooklyn.....	 253
I. Introduction.....	253
Historical Excursion.....	257
II. Structure of Rubbers.....	259
1. Chemical Composition.....	259
2. Average Molecular Weight.....	261
3. Internal Flexibility of the Linear Macromolecules.....	262
III. Configurational Statistics of an Isolated Chain Molecule.....	263
IV. Model for Bulk Rubber and Its Statistical Treatment.....	267
V. Stress-Strain Relation for Unilateral Stretch.....	270
VI. General Deformations.....	272
VII. Swelling.....	273
VIII. Effect of Thermal Expansion. Thermoelastic Inversion.....	274
IX. Statistical Treatment of Highly Extended Chains.....	275
X. Molecular Significance of the Constants of the Theory.....	278
XI. Influence of Crystallization.....	279
XII. Comparison of Theory with Experiment.....	285
1. Comparison of Theory with Total Stress-Strain Curves.....	286
2. Comparison of Theory with Resolved Stress-Strain Curves.....	290
A. Unaccelerated Hevea Gum.....	290
B. Accelerated Hevea Gum.....	290
C. Accelerated Hycar Gum.....	292
3. Discussion.....	293

<b>XIII.</b> Brief Discussion of Other Theoretical Work on the Elastic Behavior of Bulk Rubber.....	294
Bibliography.....	297
Vulcanization. By E. HAROLD FARMER, Welwyn Garden City, Herts., England.....	299
I. Introduction.....	299
II. Structural Transformations in Rubber.....	301
1. Structural Pattern.....	301
2. Thermal Decomposition and Cyclization.....	302
3. <i>Cis-trans</i> Isomerization.....	305
4. Polymerization.....	307
III. Reactivity in Relation to Constitution.....	308
1. Additive and Substitutive Tendencies.....	308
2. Vulcanizing Tendencies of Hydrorubber and Butyl Rubber.....	313
IV. Cross-Linking Processes.....	315
1. Action of Dibenzoyl Peroxides and Azo Compounds.....	315
2. Action of Nitro Compounds.....	317
3. Action of Light.....	319
4. Hydrogen Bonding.....	323
5. Insolubilization.....	323
V. Specific Reactivity of Vulcanizing Agents.....	324
1. Sulfur.....	324
2. Sulfur Monochloride.....	335
3. Grignard Reagents.....	336
VI. Constitution of Sulfur Vulcanizates.....	337
1. Proportion of Sulfur.....	337
2. Decrease in Unsaturation during Vulcanization.....	338
3. Dispersability and Molecular Integrity.....	340
4. Overcuring and Reversion.....	344
5. Accelerator Action.....	346
6. Effect of Zinc Oxide.....	355
VII. Conclusions.....	357
Bibliography.....	359
Rubber Photogels and Photovulcanizates. By HENRY P. STEVENS, Suffolk, England.....	363
I. Introduction.....	363
II. Formation of Photogels in Inactive Solvents.....	364
III. Role of Oxygen.....	365
IV. Peroxide Vulcanization.....	367
V. Carbonyl-Containing Activators.....	368
VI. Effect of Oxygen Inhibitors on Rate of Gelling.....	369
VII. Other Factors Influencing Rate of Gelling.....	369
VIII. Light Sources.....	371
IX. Properties of Photogels.....	372
X. Action of Light on Solid Rubber.....	373
XI. Properties of Dried Photogels and Irradiated Rubber.....	376

<b>XII.</b> Vulcanization—Thermal and Photochemical.....	378
<b>XIII.</b> Mechanism of <b>Photovulcanization</b> .....	381
<b>XIV.</b> Elastomers Other than Natural Rubber.....	384
<b>XV.</b> Photosynthesis of Rubber from Isoprene and Polymerization of Styrene.....	386
<b>XVI.</b> Summary.....	387
Bibliography.....	387
 Reinforcing and Other Properties of Compounding <b>Ingredients</b> . By DONALD PARKINSON. Birmingham, England.....	 389
I. Introduction.....	389
II. Physical Characteristics of Fillers.....	390
1. Particle Size.....	390
2. Particle Shape and Structure.....	392
III. Behavior of Fillers in Vulcanized Rubber.....	393
1. Reinforcement.....	393
2. <b>Tensile Strength</b> .....	394
3. Stiffness.....	396
4. Hardness.....	397
5. Tear Resistance.....	397
6. <b>Abrasion Resistance</b> .....	398
7. Work of Extension.....	399
8. Work of Retraction and Static Hysteresis.....	400
9. Dynamic Hysteresis and Rebound Resilience.....	401
10. Electrical Resistance.....	403
11. Mixtures of Fillers.....	404
IV. Fillers in Synthetic Rubber.....	404
V. Criteria of Reinforcement.....	406
VI. Dispersion and Flocculation.....	408
VII. Dispersing Agents for Carbon Black.....	413
VIII. Causes of Reinforcement.....	414
1. Particle Size and Specific Surface.....	414
2. Particle Shape and Structure.....	415
3. Flocculation of Particles.....	416
4. Particle Surface.....	416
IX. Mechanism of Reinforcement.....	417
X. Effect of Carbon Black on Hysteresis.....	426
XI. Conclusions.....	427
Bibliography.....	428
 <b>Appen</b> .....	 431
<b>Authorhdex</b> .....	435
<b>Subject Index</b> .....	445
