Contents

Preface *XIII*

List of Contributors *XXV*

Iron Oxide Nanoparticle Dispersions 1
Ignác Capek

1.1 Introduction *2*
1.2 Preparation of Iron and Iron Oxide Nanoparticles 5
1.2.1 General 5
1.2.2 Microemulsion 8
1.2.3 Precipitation 11
1.2.3.1 Hydrophobically Modified Nanoparticles 12
1.2.3.2 Hydrophilically Modified Nanoparticles 21
1.3 Metal–Iron Oxide Nanoparticles 29
1.4 Iron–Metal Alloys 38
1.5 Polymer–Iron Oxide Nanoparticles 39
1.6 Oxidation of lron Oxide Particles *44*
1.7 Applications 47
1.8 Particle Size Estimations 48
1.9 Conclusions 49
References 55

Solubilization of a Poorly Soluble Aromatic Drug by Micellar Solutions of Amphiphilic Block Copoly(oxyalkylene)s 61
David Attwood and Colin Booth

2.1 Introduction 61
2.2 Copolymers 64
2.3 Micellization and Micelle Properties 66
2.4 Drug Solubilization 68
2.4.1 Method 1 70
2.4.1.1 Effect of Composition and Micelle Core Size: 25 °C 70
2.4.1.2 Effect of Solubilization Temperature 72

Colloids and Interface Science Series, Vol. 3
Colloid Stability and Application in Pharmacy. Edited by Tharwat F. Tadros
Copyright © 2007 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim
ISBN: 978-3-527-31463-8

2.5 Method 2 73
2.6 Gelation 74
2.7 Conclusion 75
References 76

3 Controlling the Physical Stability of Liposomal Colloids 79
Ferenc Csempesz and István Puskds

3.1 Introduction 79
3.2 Experimental 80
3.2.1 Materials 80
3.2.2 Methods 81
3.2.2.1 Preparation of Liposomes 81
3.2.2.2 Characterization of the Physical Stability of Liposomes 82
3.3 Results 82
3.3.1 Particle Size and Size Distribution of Liposomes 82
3.3.2 Kinetic Stability of Liposome Dispersions 84
3.3.3 Effect of pH on the Stability of DMPC Liposomes 85
3.3.4 Effect of Dissolved Cyclodextrins on the Stability of DPPC Liposomes 87
3.4 Conclusions 88
References 89

4 Mathematical Modeling of Coagulation and Flocculation of Colloidal Suspensions Incorporating the Influence of Surface Forces 91
Venkataramana Runkana and Ponisseril Somasundaran

4.1 Introduction 91
4.2 Mathematical Model 93
4.2.1 Population Balance Equation for Aggregation 94
4.2.2 Collision Frequency 96
4.2.3 Collision Efficiency 99
4.2.3.1 Van der Waals Attraction 100
4.2.3.2 Electrical Double Layer Forces 101
4.2.3.3 Bridging Attraction/Steric Repulsion 102
4.2.3.4 Hydration Repulsion 103
4.3 Results and Discussion 104
4.3.1 Electrolyte-induced Coagulation 105
4.3.1.1 Diffusion-limited Aggregation 105
4.3.1.2 Reaction-limited Aggregation 106
4.3.2 Polymer-induced Flocculation 109
4.3.2.1 Simple Charge Neutralization 109
4.3.2.2 Bridging Flocculation *111*
4.4 Conclusions 115
References 116

Emulsion Stability and Interfacial Properties – Application to Complex Emulsions of Industrial Interest 119
Danièle Clausse, Delphine Daniel-David, François Gomez, Ljepsa Komunjer, Isabelle Pezron, Christine Dalmazzone, and Christine Noïk

Introduction 120
Macroscopic Characterization of Complex Emulsions: Properties and Stability 121
5.2.1 Emulsion Definitions 121
5.2.2 Relevant Parameters 122
5.2.3 Emulsion Stability 122
5.2.4 Methods Used to Characterize Emulsion Stability 124
5.3 Methods Used to Characterize Interfacial Properties 127
5.3.1 Experimental Methods 127
5.3.2 Adsorption 127
5.3.2.1 Structure of Adsorbed Layers 127
5.3.2.2 Principal Surface/Interface Parameters 128
5.4 Impact of Interfacial Phenomena on the Stability of Complex Emulsions 130
5.4.1 Oil-in-Water Food Emulsions 130
5.4.1.1 Surface-active Food Emulsion Components 130
5.4.1.2 Relationship Between the Properties of the Protein Interfacial Film and the Stability of Food Emulsions 132
5.4.2 Water-in-Crude Oil Emulsion: Formation and Destabilization 136
5.4.2.1 Correlation Between Water-in-Crude Oil Emulsion Stability and Physicochemical Parameters 137
5.4.2.2 Destabilization of Water-in-Oil Emulsions by Chemical Demulsifiers 140
Conclusions 144
References 145

Wetting Film Dynamics and Stability 151
Boryan Radoev, Klaus Werner Stockelhuber, Roumen Tsekov, and Philippe Letocart

6.1 Introduction 151
6.2 Dynamics of Wetting Films 152
6.2.1 Drainage of Liquid Films and Dimple Relaxation 152
6.2.2 Acoustically Excited Surface Waves 158
6.3 Stability of Wetting Films 161
6.3.1 Stable Films 161
6.3.2 Rupture of Wetting Films 163
6.3.3 Film Rupture Caused by Nano-bubbles 166
References 171

8.5 Outlook 273
Reference 273

9 Stabilization of Thin Films, Foams, Emulsions and Bifluid Gels with Surface-active Solid Particles 277
Krassimir P. Velikov and Orlin D. Velev

9.1 Introduction 278
9.2 Absorption Behavior of Particles at Interfaces 278
9.3 Mechanism of Stabilization of Foams and Emulsions by Spherical Particles 281
9.3.1 Particles in Liquid Films 282
9.3.2 Emulsions 287
9.3.2.1 Effect of Particle Hydrophobicity 287
9.3.2.2 Effect of Particle Size 289
9.3.2.3 Effect of Particle Concentration 290
9.3.2.4 Interfacial and Bulk Rheology 292
9.3.3 Foams 294
9.4 Stabilization by Non-spherical Particles 294
9.4.1 Foams 295
9.4.2 Emulsions 299
9.5 Multiple Emulsions Stabilized with Particles 300
9.6 Bifluid Particle-stabilized Gels 301
9.7 Conclusions and Outlook 302
References 304

10 Forces in Aqueous Nanofilms Containing Polyelectrolytes 307
Dan Qu, Katarzyna Hänni-Ciunel, Daniel Rapoport, and Regine v. Klitzing

10.1 Introduction 307
10.2 Forces in Films 309
10.2.1 DLVO Forces 309
10.2.2 Structural Forces 309
10.3 Methods for Force Measurements 310
10.3.1 Thin-film Pressure Balance (TFPB) 310
10.3.1.1 TFPB for Fluorescence Measurements (FTFPB) 313
10.3.1.2 TFPB or Wetting Films 313
10.3.2 Colloidal Probe Atomic Force Microscope (CP-AFM) 315
10.3.3 Surface Force Apparatus (SFA) 316
10.3.4 Comparison Between the Different Methods: Advantages and Disadvantages, Fields of Application 316
10.4 Effect of Confinement 318
10.4.1 Comparison of Polyelectrolyte Structuring Within Bulk and Film 318
Local Polyelectrolyte Concentration 322

10.5 Effect of Different Parameters on Film Forces *323*
10.5.1 Molecular Architecture *323*
10.5.1.1 Amphiphilic Diblock Copolymers *323*
10.5.1.2 Branched Polyelectrolytes *324*
10.5.1.3 Rigidity of the Polymer Backbone *326*
10.5.2 Electrostatics *326*
10.5.2.1 Polymer Charge Density *327*
10.5.2.2 Ionic Strength *329*
10.6 Effect of Film Interface Properties *330*
10.6.1 Charge of Interface *330*
10.6.1.1 Modification of Solid Interfaces *330*
10.6.1.2 Variation of Polyelectrolyte/Surfactant Composition in Foam Films *330*
10.6.2 Wetting Films Containing Polyelectrolyte Solutions *333*
10.7 Summary and Conclusions *333*
References *334*

11 Association Between Polyelectrolytes and Oppositely Charged Surfactants in Bulk and at Solid/Liquid Interfaces *337*
Per M. Claesson, Andra Dedinaite, Róbert Mészáros, and Imre Varga

11.1 Introduction *337*
11.2 Bulk Association *338*
11.2.1 Determination of Binding Isotherms *338*
11.2.2 Thermodynamics of Association *340*
11.2.2.1 Site Binding Models *343*
11.2.2.2 Closed Aggregate Formation Models *347*
11.2.2.3 Small Systems Thermodynamic Model *351*
11.2.2.4 Monomer Binding to Polyelectrolytes *356*
11.2.3 Simulations and Additional Theoretical Approaches *356*
11.2.3.1 One Polyelectrolyte and One Macroion *357*
11.2.3.2 Several Polyelectrolytes and One Macroion *358*
11.2.3.3 One Polyelectrolyte and Several Macroions *358*
11.2.3.4 Several Polyelectrolytes and Several Macroions *359*
11.2.4 Stability of Polyelectrolyte–Surfactant Aggregates *360*
11.2.5 Structure of Polyelectrolyte–Surfactant Complexes *361*
11.3 Interfacial Association *364*
11.3.1 Ellipsometry *365*
11.3.1.1 Polyelectrolyte Adsorption *366*
11.3.1.2 Polyelectrolyte–Surfactant Systems *368*
11.3.2 Dual Polarization Interferometry (DPI) *379*
11.3.3 Quartz Crystal Microbalance with Dissipation (QCM-D) *381*
11.3.3.1 Preadsorbed Polyelectrolyte Layers *382*
11.3.3.2 Adsorbed Layers Formed by Preformed Aggregates *383*
11.3.4 Neutron Reflectivity *384*

11.3.5 Surface Forces 385
11.3.5.1 Preadsorbed Polyelectrolyte Layers, Class (Ip) Systems 385
11.3.5.2 Adsorbed Layers Formed by Preformed Aggregates 391
11.4 Conclusions 391
References 392

12 Non-ionic Micelle Films: Thinning and Stability 397
Alex D. Nikolov and Darsh T. Wasan

12.1 Introduction 397
12.2 Micellar Film Thinning Probed by Capillary Force Balance 400
12.3 Results and Discussion 401
12.4 Conclusions 407
References 408

13 PEGylated Polymer-based Nanoparticles for Drug Delivery to the Brain 409
Hyun Ryoung Kim, Karine Andrieux, and Patrick Couvreur

13.1 Introduction 409
13.2 Biodegradable Polymer-based PEGylated Nanoparticles 411
13.2.1 Methodology for Surface Modification of Nanoparticles by PEG 412
13.2.1.1 Adsorption of PEG Chains on the Nanoparticle Surface 412
13.2.1.2 Covalent Attachment of PEG Chains to the Nanoparticle Surface 412
13.2.2 Physicochemical Characterization of Nanoparticles 414
13.2.3 Interaction with Blood Components and Plasma Proteins 415
13.2.4 Application of PEGylated Nanoparticles to Brain Targeting 417
13.3 Nanogels 419
13.4 Active Targeting of PEGylated Nanoparticles 420
13.4.1 PEG Derivatives for Protein Attachment 420
13.4.2 Targeting of Transferrin Receptor for Brain Delivery 422
13.4.2.1 OX26-conjugated PEGylated Nanoparticles 422
13.4.2.2 Transferrin Conjugation 423
13.5 Conclusions 424
References 425
