Preface *XI*

List of Contributors *XXIII*

<b>1</b>	<b>Wetting of Surfaces and Interfaces: a Conceptual Equilibrium Thermodynamic Approach</b>	<b>1</b>
	<i>Jarl S. Rosenholm</i>	
1.1	Introduction	1
1.2	Thermodynamic Reference Parameters	2
1.3	Wetting in Idealized Binary Systems	6
1.3.1	Models for Dispersive Solid–Liquid Interactions	6
1.3.2	Contribution from the Surface Pressure of (Gaseous) Molecules and Spreading of Liquid Films	14
1.3.3	Models for Specific Polar (Lewis) Interactions	21
1.3.4	Partial Acid and Base Components	24
1.4	Wetting in Idealized Ternary Systems	37
1.4.1	Preferential Spreading at Three-component Interfaces	41
1.4.2	Models for Dispersive Solid–Liquid–Liquid Interaction	43
1.4.3	Contribution from the Surface Pressure of a Monomolecular (Gaseous) Film	45
1.4.4	Models for Lewis (Polar) Solid–Liquid–Liquid Interaction	46
1.5	Adsorption from Solution	47
1.5.1	Determination of Lewis (Polar) Interactions with Surface Sites	48
1.5.2	Determination of Brønsted (Charge) Interactions with Surface Sites	50
1.5.3	Adsorption Isotherms for Competitive Interaction at Surface Sites	58
1.6	Contributions from Surface Heterogeneities	65
1.6.1	Non-ideal Solid–Liquid Brønsted (Charge) Interactions	66
1.6.2	Surface Energy of Coexisting Crystal Planes	68
1.6.3	Competing Multi-site Adsorption	69
1.6.4	Structural Heterogeneities of the Surface	71

1.7	Contributions from External Stimuli	75
1.7.1	External Electrostatic Potential	75
1.7.2	External Illumination	77
1.8	Conclusions	81
	References	82
<b>2</b>	<b>Surface Forces and Wetting Phenomena</b>	<b>85</b>
	<i>Victor M. Starov</i>	
2.1	Wetting and Neumann-Young's Equation	85
2.2	When is the Neumann-Young Equation Valid?	88
2.3	Hysteresis of Contact Angle	90
2.3.1	Line Tension	91
2.4	Surface Forces	93
2.5	Components of the Disjoining Pressure	95
2.5.1	Molecular or Dispersion Component	95
2.5.2	Double Electrical Layers	96
2.5.3	Electrostatic Component of the Disjoining Pressure	97
2.5.4	Structural Component of the Disjoining Pressure	98
2.6	Thin Liquid Films	100
2.7	Disjoining Pressure and Equilibrium Contact Angles	102
2.8	Hysteresis of Contact Angles from a Microscopic Point of View	
	Surface Forces	106
	References	108
<b>3</b>	<b>Investigation of Plateau Border Profile Shape with Flow of Surfactant Solution Through Foam Under Constant Pressure Drop Using the FPDT Method</b>	<b>109</b>
	<i>Pyotr M. Kruglyakov and Natalia G. Vilkova</i>	
3.1	Theoretical Background	109
3.1.1	Foam Drainage	109
3.1.2	Foam Pressure Drop Technique	111
3.1.3	Hydroconductivity	112
3.2	Experimental Investigation of the Liquid Flow Through the Foam	114
3.3	Results and Discussion	115
3.3.1	Liquid Flow Through the Foam with Constant Plateau Border Radius	115
3.3.2	Comparison of Experimental Plateau Border Profile with that Calculated on the Assumption of a Mobile Border	117
3.3.3	Influence of Surface Tension Decrease on the Plateau Border Profile	120
3.3.4	Comparison of the Experimental and Calculated Volume Flow-rates	121

- 3.4 Foam Drainage Investigations Using the Pressure Established  
When Pressure Drop Is Created in the Liquid Phase of Foam 123
- 3.5 Conclusions 124
- References 124

**Physical Chemistry of Wetting Phenomena 127**

*Nicolay V. Churaev and Vladimir D. Sobolev*

- 4.1 The State of the Theory of Wetting 127
- 4.2 Non-polar Liquids 130
- 4.3 Low Energetic Surfaces 132
- 4.4 High-energy Surfaces 136
- 4.5 Polar Liquids 137
- 4.6 Hydrophobic Surfaces 138
- 4.7 Hydrophilic Surfaces 142
- 4.8 Methods of Control of Surface Wetting 146
- References 150

**The Intrinsic Charge at the Hydrophobe/Water Interface 153**

*James K. Beattie*

- 5.1 Introduction 153
- 5.2 Oil Droplets 153
- 5.3 Gas Bubbles 156
- 5.4 Thin Films 156
- 5.5 Solid Hydrophobic Surfaces 156
- 5.6 Self-assembled Monolayers 157
- 5.7 Surface Tension 158
- 5.8 Theory 159
- 5.9 The Autolysis Hypothesis 159
- 5.10 Excluded Explanations 161
- 5.11 Conclusions and Outstanding Questions 162
- References 163

**Surface Forces in Wetting Phenomena in Fluid Systems 165**

*Hiroki Matsubara and Makoto Aratono*

- 6.1 Overview of Wetting Transition of Alkanes on a Water Surface 165
- 6.2 Transition from Partial to Pseudo-partial Wetting Induced  
by Surfactant Adsorption at the Air–Water Interface 168
- 6.3 Generality of Surfactant-induced Wetting Transition  
and Theoretical Prediction of the Wetting Transition Using  
a 2D Lattice Model 172
- 6.4 Line-tension Behavior Near the Transition from Partial  
to Pseudo-partial Wetting 177
- 6.5 Conclusion 181
- References 181

<b>7</b>	<b>Aggregation of Microgel Particles</b>	183
	<i>Brian Vincent and Brian Saunders</i>	
7.1	Introduction to Microgel Particles	183
7.2	Stability and Aggregation of Microgel Particles: Theoretical Background	185
7.2.1	Interparticle Forces	185
7.2.2	Criteria for Dispersion Stability	187
7.3	Experimental Studies of Microgel Aggregation	189
7.3.1	Temperature- and Electrolyte-induced Homoaggregation	189
7.3.2	Depletion-induced Aggregation	198
7.3.3	Heteroaggregation	199
	<i>References</i>	201
<b>8</b>	<b>Progress in Structural Transformation in Lyotropic Liquid Crystals</b>	203
	<i>Idit Amar-Yuli and Nissim Garti</i>	
8.1	Introduction	204
8.2	Liquid Crystal Mesophases	204
8.2.1	Lamellar Mesophases	204
8.2.2	Hexagonal Mesophases ( $H_1$ , $H_{1l}$ )	205
8.2.3	Cubic Mesophases	207
8.3	Mesophase Transformations	208
8.3.1	Correlation Between Molecular Structure and Phase Behavior	212
8.3.2	The Tail Volume and/or Length (Binary System)	212
8.3.3	The Area per Head Group (Binary System)	214
8.3.4	Guest Molecule Effect (Ternary System)	219
8.3.4.1	Hydrophilic Guest Molecule	219
8.3.4.2	Lipophilic Guest Molecule	221
8.3.5	Co-surfactant	226
8.4	Microstructure and Transformation Identification Techniques	229
8.4.1	Optical Microscopy	229
8.4.2	X-ray Diffraction	229
8.4.3	Differential Scanning Calorimetry (DSC)	234
8.4.4	Infrared (IR) Spectroscopy	236
8.4.5	Nuclear Magnetic Resonance (NMR) Spectroscopy	239
8.4.6	Rheology	241
8.5	Conclusions	243
	<i>References</i>	244

<b>9</b>	<b>Particle Deposition as a Tool for Studying Hetero-interactions</b>	<b>247</b>
	<i>Zbigniew Adamczyk, Katarzyna Jaszczólt, Aneta Michna, Maria Zembala, and Jakub Barbasz</i>	
	Abstract	247
9.1	Introduction	248
9.2	Specific Interactions	250
9.2.1	Electrostatic Interactions	250
9.2.2	Van der Waals Interactions	258
9.2.3	Interactions in Dispersing Media, Hamaker Constant Calculations	267
9.2.4	Superposition of Interactions and the Energy Profiles	269
9.3	Phenomenological Transport Equations	271
9.3.1	Near-surface Transport	275
9.3.2	Limiting Solutions for the Perfect Sink Model	278
9.3.3	Convective-diffusion Transport to Various Interfaces	282
9.4	Illustrative Experimental Results	291
9.4.1	Initial Deposition Rates	291
9.4.2	Particle Deposition on Heterogeneous Surfaces	298
9.5	Conclusions	308
	References	309
<b>10</b>	<b>Recent Developments in Dilational Viscoelasticity of Surfactant Layers</b>	<b>313</b>
	<i>Libero Liggieri, Michele Ferrari, and Francesca Ravera</i>	
10.1	Introduction	313
10.2	Surface Rheology of Surfactant Layers	314
10.2.1	Adsorption Kinetics and Interfacial Rheology	314
10.2.2	Main Surface Dilational Rheology Concepts	319
10.3	Dilational Rheology with Multiple Relaxation Processes	321
10.3.1	General Approach	321
10.3.2	Adsorbed Layers with Variable Average Molar Area	325
10.3.3	Interfacial Phase Transition with Aggregation	331
10.3.4	Insoluble Surfactant Layers	334
10.3.5	Interfacial Reactions in Insoluble Monolayers	337
10.4	Conclusions and Perspectives	341
	References	342
<b>11</b>	<b>Rapid Brownian and Gravitational Coagulation</b>	<b>345</b>
	<i>Andrei S. Dukhin and Stanislav S. Dukhin</i>	<b>345</b>
11.1	Introduction	345
11.2	Population Balance Equations	347
11.3	Smoluchowski Solution for Brownian Coagulation	349
11.4	Collision Frequency for Gravitational Aggregation	352
