

CONTENTS

1. Nucleation	1
1. Cluster Formation	1
2. Nature of the Nucleus	2
A. Classical Formulation	3
B. Nonclassical Theory	6
3. Heterogeneous Nucleation	7
4. Experimental Investigation of Heterogeneous Nucleation	12
5. Coherent and Incoherent Nucleation	19
6. Size Effects	20
7. Nucleation Inhibition	23
8. Precipitation Systems	24
9. Nucleation from Homogeneous Solution	26
10. Homogeneous Nucleation	29
11. Induction Periods	31
12. Nucleation in Physiology	32
13. Morphological Considerations	35
14. Nucleation Kinetics	39
15. Summary	41
References	42
2. Precipitation and Growth Kinetics	44
1. Crystal Growth	45
2. Crystal Growth Kinetics	49
A. Screw Dislocation	49
B. Two-Dimensional Nucleation	51
3. Growth of Seed Crystals	54
4. Effect of Impurities on Seed Growth Rates	56
5. Dissolution of Seed Crystals	58
6. Anomalies in Seed Crystal Growth	60
7. Precipitation from Homogeneous Solution	61
8. Precipitation of Organic Crystals and Ion-Chelate Compounds	64
9. Precipitation by Direct Mixing	66
10. Temperature Coefficients of Growth and Precipitation	69
11. Dissolution of Precipitates	70
12. Secondary Growth	71
13. Techniques for Following Growth and Precipitation Kinetics	72
14. Summary	74
References	76
3. Coprecipitation	79
1. Equilibrium Systems—Miscible Components	80
2. Structural Principles of Mixed Crystal Formation	86
3. Intermediate Miscibility	89

4. Nonequilibrium Conditions.....	91
5. Experimental Examination of Heterogeneous Distributor	95
6. Distribution of Microcomponent in the Solid Phase.....	97
7. Rate of Precipitation.....	98
8. Adsorption Compounds.....	103
9. Coprecipitation of liquids.....	107
10. Coprecipitation in Geochemistry and Physiology.....	108
References.....	111
4. Surface Properties.....	113
1. Energetics of Interfaces.....	113
2. The Surface Energy of Solids.....	114
A. Ionic Surfaces.....	115
B. Organic Crystals.....	124
3. Liquid-Solid Interactions.....	125
4. Evaluation of Interfacial Energies.....	129
5. Thermodynamic Determination of Dispersive Forces...	132
6. Polar Interfacial Forces.....	133
7. Curved Surfaces.....	135
8. Surface Enthalpy.....	137
9. Adsorption from Solution.....	138
A. Adsorption of Ions.....	140
B. Adsorption of Molecules.....	141
10. Real Surfaces.....	142
11. Rates of Adsorption and Surface Exchange.....	143
12. Aging of Precipitates.....	145
13. Estimation of Precipitate Surface Areas.....	146
14. Summary.....	148
References.....	148
5. Morphology.....	151
1. Solubility.....	151
2. Rate of Growth.....	156
3. Dendritic Growth.....	158
4. Instability of the Interface.....	161
5. Fragmentation of Dendrites.....	
6. Whisker Formation.....	165
7. Crystal Habit.....	166
8. Habit Modification by Solvent.....	169
9. Habit Modification by Foreign Ions.....	170
10. Modification by Organic Materials and Dyes.....	173
11. Liquid Crystals.....	174
12. Agglomeration.....	175
13. Ionic Effect on Stability.....	177
14. Solvent Effect on Stability.....	180
15. Summary.....	182
References.....	185

6. Complex Precipitation Systems, by H. Füredi	188
1. Experimental Methods and Techniques.....	188
2. Evaluation of Equilibrium Constants.....	189
A. Metal-Ligand Complex Formation.....	190
B. Metal-Hydroxide Complex Formation.....	191
C. Proton Complexes.....	192
D. Mixed Salt Formation.....	193
3. The Solubility Curve.....	194
4. The Precipitation Boundary.....	196
5. Graphical Presentation of Precipitation Data.....	197
A. Evaluation of Coagulation Values from Kinetic Precipitation Data.....	197
B. Precipitation Curves.....	201
C. Precipitation Diagrams—Two-Component Systems.....	203
D. Precipitation Diagrams—Three- and Multicomponent Sys- tems.....	206
6. Applications.....	209
Acknowledgments.....	213
References.....	213
