

Contents

INTRODUCTION AND BASIC PRINCIPLES	1
Thermal Chemistry and Photochemistry	2
Electronic Structure of Molecules	3
Electromagnetic Radiation	5
1.3.1 Absorption of radiation	6
Excited States	8
1.4.1 Spin multiplicity	8
1.4.2 State diagrams	8
2 EXCITED STATES: PRODUCTION AND TIME- INDEPENDENT PROPERTIES	11
2. Factors Affecting Intensities of Absorption Spectra	11
2.1.1 Absorption and emission of light	11
2.1.2 Radiative lifetimes	13
2.1.3 The intensities of electronic transitions	15
2.1.4 Selection rules	16
2.1.5 Vibrational overlap integral (Franck–Condon Principle)	17
2.1.6 Spin	21
2.1.7 Electronic transition moment and polarization	24
2.1.8 Vibronic coupling and forbidden transitions	25
2.1.9 Orbital overlap	26
2.1.10 Oscillator strengths and forbidden transitions	27
2.1.11 Other factors affecting the intensities of absorption spectra	27
Types of Transitions	29
2.2.1 Nomenclature	29
2.2.2 $\pi \rightarrow \pi^*$ Transitions	29
2.2.3 $n \rightarrow \pi^*$ Transitions.	32
2.2.4 $n \rightarrow \sigma^*$ Transitions	33
2.2.5 Charge–transfer (CT) transitions	33
2.2.6 Contact DACs and contact charge–transfer absorption	35

2.4.1	Laser applications	
2.5	Properties of Excited States	
2.5.1	Geometry of excited molecules	
2.5.2	Acid–base properties	
2.5.3	Dipole moments	
2.6	Energies of Excited States	
2.6.1	Singlet–triplet splitting	
2.6.2	Singlets, triplets and biradicals	
2.6.3	Solvent effects	
2.7	Identification of (n, π^*) and (π, π^*) States	

Chapter 3 EXCITED STATES: TIME-DEPENDENT PHENOMENA

3.1	Introduction	64
3.1.1	Dissipative pathways	64
3.1.2	Radiative transitions	65
3.1.3	Radiationless (or non-radiative) transitions	66
3.1.4	Kinetics, quantum yields and lifetimes	67
3.2	Radiative Transitions	70
3.2.1	Methods	70
3.2.2	Fluorescence	78
3.2.3	Phosphorescence	81
3.2.4	Delayed fluorescence	83
3.3	Radiationless Transitions	86
3.3.1	Summary of experimental data on large molecules in dense media	87
3.3.2	A simple model	87
3.3.3	The electronic matrix element	89
3.3.4	Vibrational overlap integral (Franck–Condon Factor)	90
3.3.5	Energy gap law	92
3.3.6	Deuteration and other effects	92
3.3.7	Fluorescence vs. phosphorescence	95
3.3.8	Radiationless transitions, isomerization and photo-chemistry	97

Chapter 4 QUENCHING OF EXCITED STATES

4.1	Introduction	101
4.2	Excimers	103
4.2.1	Excimer structure and bonding	105

Chapter 5	INVESTIGATION OF REACTION MECHANISMS	133
5.1	Qualitative Methods	133
5.1.1	Products	133
5.1.2	Intermediates	135
5.1.3	Lowest energy excited states	142
5.1.4	Reactive excited states	143
5.2	Quantitative Methods	145
5.2.1	Quantum yields	146
5.2.2	Kinetics of quenching	148
5.2.3	Excited state lifetimes	155
5.2.4	Controlled variables	157

Chapter 6	ORBITAL SYMMETRY AND PHOTOCHEMISTRY	
6.1	Introduction	162
6.2	Classes of Pericyclic Reaction	163
6.2.1	Stereochemical aspects	165
6.3	Theoretical Treatments	166
6.3.1	Correlation diagrams	167
6.3.2	The Woodward–Hoffmann Rule	170
6.4	Orbital Symmetry and Photochemical Reactions	171

Problems

Answers

Appendix	APPLICATIONS OF GROUP THEORY	195
A.1	Symmetry Elements and Symmetry Operations	195
A.2	Character Tables	196
A.3	Group Theory and Electronic Selection Rules	202
