Preface

Glossary

vii

1	Introduction	1
1.1	Introduction and background	1
1.2	Survey of combustion phenomena	2
1.3	Summary of principles and overview of applications	4
1.4	The nature of hydrocarbon and other fuels	5
	Further reading	9
2	Physicochemical principles	10
2.1	Introduction	10
2.2	Thermodynamics of combustion	10
2.2.1	Energy of reaction and overall heat release	10
2.2.2	Adiabatic temperature rise and evaluation of heat capacities	13
2.2.3	Extent of reaction and determination of chemical equilibrium	15
2.3	Rates of chemical change in combustion	18
2.3.1	Reaction rate, kinetic rate laws and order of reaction	18
2.3.2	Concentration dependences in global and elementary reaction rate expressions	19
2.3.3	Temperature dependence of the rate constant	21
2.3.4	Termolecular reactions and elements of chain reaction mechanisms	22
2.4	Transport properties of gases	24
2.5	Grouping of parameters and dimensionless groups	26
	Further reading	26
	Problems	27
3	Flames	30
3.1	Introduction	30
3.2	Mass and energy conservation in premixed flames	30
3.3	Structure of the ideal, adiabatic, one-dimensional, premixed flame	32
3.4	Properties of laminar, premixed flames	34
3.5	Flammability limits	35
3.6	Flame quenching	36
3.7	Stabilisation of flames on burners	37
3.8	Flame stabilisation at high velocity	42
3.9	Diffusion flames: properties and chemical background	43
3.10	Recent developments in experimental methods for the study of flames	47
3.10.1	Background principles of laser diagnostics	49
3.10.2	Laser-induced fluorescence	50
3.10.3	Coherent anti-Stokes Raman spectroscopy (CARS)	51
3.10.4	Planar imaging techniques	51
	Further reading	52
	Problems	53
4	Flame theory and turbulent combustion	54
4.1	Introduction	54
4.2	Foundations of wave propagation theory	54

- 4.2.1 Diffusional propagation of travelling wavefronts
- 4.3 Non-isothermal wave, or flame propagation
- 4.4 A unifying theme for chemical kinetic/fluid dynamic interactions
- 4.5 Flame stretch and flame stretch rates in laminar flames
 - 4.5.1 Dependences of the propagation of stretched flames on L
- 4.6 Laminar flamelet concepts in premixed turbulent combustion
- 4.7 Correlation of measured burning velocities and turbulence intens
- 4.8 Theory of turbulent diffusion flames
- Further reading
- Problems

5 Detonations

- 5.1 Introduction
- 5.2 Shock waves
- 5.3 Application of shock tubes in kinetic and combustion studies
- 5.4 One-dimensional structure of detonation waves
- 5.5 Mathematical treatment of detonation
- 5.6 Three-dimensional structure of detonations
- 5.7 Initiation of detonation and the deflagration to detonation transition
- Further reading
- Problems

6 High temperature and flame chemistry ($T > 1000$ K)

- 6.1 Background and kinetic overview
 - 6.1.1 Relative rates of elementary reactions
- 6.2 Mechanisms of alkane oxidation
 - 6.2.1 Principal propagating free radicals and reactions
- 6.3 Mechanisms of aromatic hydrocarbon oxidation
- 6.4 The relevance of reactions in hydrogen and carbon monoxide oxidation
 - 6.4.1 Foundation to the combustion of hydrogen
 - 6.4.2 The oxidation of carbon monoxide
- 6.5 Relationship between high temperature chemistry and the spatial structure of premixed flames
- 6.6 Light emission from flames
- 6.7 Ionisation processes
 - 6.7.1 Mechanisms of ion formation in flames
 - 6.7.2 Aerodynamic effects and applications of ion formation in flames
- 6.8 Soot formation in flames
 - 6.8.1 The nature of soot
 - 6.8.2 Conditions for soot formation
 - 6.8.3 Gas-phase mechanisms leading to soot formation
 - 6.8.4 The condensed phase of soot formation
 - 6.8.5 Fullerenes
- 6.9 Diamond synthesis in flames
- Further reading
- Problems

7 Low temperature chemistry ($T < 1000$ K)

- 7.1 Introduction and background
- 7.2 The oxidation of methane
- 7.3 An overview of the oxidation of higher alkanes and other organic compounds
- 7.4 Alkylperoxy radical formation and isomerisation
- 7.5 Extent of reaction and the negative temperature dependence of reaction rate
- 7.6 Alkene formation from alkylperoxy radicals

7.7	Reactions of other species	141
7.7.1	Alkoxy radicals	141
7.7.2	Aldehydes and their derivatives	141
7.7.3	Toluene and other aromatics	142
	Further reading	142
	Problems	143
8	Thermal ignition	145
8.1	Introduction	145
8.2	Thermal ignition theory	145
8.2.1	Heat release rate dependences as criteria for spontaneous ignition	145
8.2.2	Vessel temperature and heat loss rate as criteria for spontaneous ignition	150
8.2.3	Summary of conditions for thermal ignition to be possible	152
8.3	Analytical interpretation of criteria for thermal ignition	152
8.4	Frank-Kamenetskii theory for internal distributed temperatures	157
8.5	Combustion of particulate and fibrous materials in storage or transport	159
8.6	Asymmetric heating and initiation by hot spots	161
	Further reading	161
	Problems	161
9	Isothermal chain branching and chain-thermal interactions	163
9.1	Introduction	163
9.2	Kinetics and mechanisms of chain branching reactions	163
9.2.1	A formal analysis of isothermal chain branching	165
9.3	Quadratic chain branching with reactant consumption	169
9.4	Relationships between thermal and isothermal branching chain ignition theories	170
9.5	Spontaneous ignition of hydrogen + oxygen	172
9.5.1	($p-T_a$) ignition boundaries and their kinetic origins	172
9.5.2	Kinetic models for oxidation in the vicinity of the ignition limits	177
9.6	Carbon monoxide oxidation and ignition	178
9.7	Spontaneous ignition and oscillatory cool flames of hydrocarbons	181
	Further reading	185
	Problems	185
10	Ignition, extinction and oscillatory phenomena	188
10.1	Introduction and background	188
10.2	Combustion in a CSTR	188
10.2.1	Adiabatic operation	190
10.2.2	Non-adiabatic operation	192
10.3	Exothermic oxidation at a surface	196
10.4	Unifying links between thermal ignition, reaction in a CSTR and at surfaces	199
10.5	The interpretation of oscillatory cool flames and multiple-stage ignitions	200
	Further reading	204
	Problems	204
11	Aspects of mixed and condensed phase combustion	206
11.1	Introduction	206
11.2	The burning of a liquid droplet	206
11.2.1	Diffusion of oxygen outside the flame front	208
11.2.2	Heat balance at $r < r_f$	209

- 11.2.3 Heat balance at $r > r_f$
- 11.2.4 An expression for the flame temperature, T_f
- 11.2.5 An expression for the burning rate constant, k_b
- 11.2.6 Droplet combustion in heavy oil burners
- 11.3 Pool fires
- 11.4 Heterogeneous combustion of coal and carbonaceous chars
- 11.5 Practical applications of particulate or solid combustion
 - 11.5.1 Pulverised coal burners and cyclone furnaces
 - 11.5.2 Solid fuel beds
 - 11.5.3 Fluidised-bed combustion
- Further reading
- Problems

12 Combustion hazards

- 12.1 Introduction
- 12.2 Minimum autoignition temperature of gases or vapours of volatile liquids
- 12.3 Flammability limit, flash point and fire point of vapours
- 12.4 Minimum ignition energy
- 12.5 Large-scale explosion of gases and vapours
- 12.6 Mitigation of confined explosions
- 12.7 Dust explosions
- 12.8 Laser initiation of ignition
- 12.9 Smouldering combustion
- 12.10 Firespread
- 12.11 The combustion of polymers
- 12.12 Fire extinguishing agents
- Further reading
- Problem

13 Internal combustion engines and fuels

- 13.1 Introduction
- 13.2 Spark ignition (s.i.) engines
 - 13.2.1 Principles of operation, design and performance
 - 13.2.2 Lean burn and stratified charge
 - 13.2.3 'Engine knock' and fuel octane rating
 - 13.2.4 Reformulated gasolines
 - 13.2.5 The optimisation of combustion
- 13.3 Diesel engine combustion and fuels
 - 13.3.1 Principles of operation, design and performance
 - 13.3.2 Fuel injection and combustion processes
 - 13.3.3 Composition of diesel fuels and their characterisation
- 13.4 Alternative fuels for spark ignition and diesel engines
- 13.5 Gas turbine, turbojet and ramjet engines
 - 13.5.1 Design and performance considerations of gas turbines
 - 13.5.2 Gas turbine fuels
- Further reading

14 Combustion and the environment

- 14.1 Introduction
- 14.2 Reactions of pollutants in the atmosphere
 - 14.2.1 Photochemical smog
 - 14.2.2 Airborne sulphur emissions
 - 14.2.3 Destruction of the ozone layer
 - 14.2.4 The 'greenhouse' effect
- 14.3 Combustion-generated pollutants from engines

14.3.1	Carbon monoxide	273
14.3.2	Nitrogen oxides	275
14.3.3	Unburned hydrocarbons	276
14.3.4	PAH, smoke and particulates	277
14.4	Measurements of exhaust emissions	279
14.5	Suppression of pollutants from s.i. engines	280
14.6	Emissions from natural gas fired systems	283
14.7	Emissions from liquid hydrocarbons and solid fuel combustion	285
14.8	Quantifying gaseous emissions	286
	Further reading	287
Answers to problems with numerical solutions		288
