

C O N T E N T S

<i>Preface</i>	<i>page xi</i>
<i>Introduction</i>	xv

PART I

CHEMISTRY AND KINETICS OF THE REACTIONS BETWEEN FUEL GASES AND OXYGEN

Chapter I. THEORETICAL FOUNDATIONS

1. Thermal and branched-chain explosions, p. 1
2. Some fundamentals of reaction kinetics, p. 5
3. The steady-state reaction rate and the explosion limit, p. 10
4. Chain initiation and chain breaking at the wall, p. 13
5. Chain initiation in the volume and chain breaking at the wall, p. 23
6. Criteria of chain reactions, p. 29

Chapter II. THE REACTION BETWEEN HYDROGEN AND OXYGEN

1. The explosion peninsula, p. 30
2. The upper explosion limit, p. 32
3. The lower explosion limit, p. 36
4. The reaction above the upper explosion limit: regions of gas phase and surface initiation of chains, p. 37
5. Chain initiation in the gas phase, p. 39
6. Chain initiation at the wall, p. 48
7. Reactions of chain carriers in mixtures of hydrogen and oxygen at low temperatures, p. 52
8. Sensitization by nitrogen peroxide, p. 56
9. Sensitization by ammonia and cyanogen, p. 65
10. Sensitization by atoms of hydrogen and oxygen, p. 66
11. Inhibition by halogens, p. 67
12. Experiments in a silver vessel, p. 68

Chapter III. THE REACTION BETWEEN CARBON MON-OXIDE AND OXYGEN

1. The explosion peninsula, the non-explosive reaction and the effect of water, p. 70
2. The upper explosion limit, p. 71
3. The water-catalysed reaction outside the explosion region, p. 74
4. The lower explosion limit, p. 77
5. Sensitization by nitrogen peroxide and ammonia, p. 77
6. Inhibition by iodine, p. 78

Chapter IV. THE REACTION BETWEEN HYDRO-CARBONS AND OXYGEN

1. Connection between induction period and aldehyde formation, p. 79
2. Oxidation of aldehydes, p. 81
3. Oxidation of paraffin hydrocarbons: initiation of chains, p. 88
4. The unbranched chain reaction, p. 89
5. Relation between the high-pressure oxidation of methane and ethane and chemistry of peroxides, p. 92
6. Branching reactions involving peroxides and peracids, p. 96
7. The primary reaction, p. 105
8. Side reactions, p. 106
9. Kinetics of oxidation of methane, p. 108
10. Kinetics of oxidation of higher paraffin hydrocarbons, p. 115
11. Oxidation of ethylene, p. 120
12. Propylene and higher olefins, p. 122
13. Acetylene, p. 122
14. Benzene and other aromatics, p. 123

Chapter V. EMISSION SPECTRA AND IONIZATION IN THE FLAME FRONT

1. Flame spectra of hydrogen and carbon monoxide, p. 124
2. Flame spectra of hydrocarbons, p. 126
3. Ions in flames, p. 128

Chapter VI. THE PROBLEM OF IGNITION BY SPARKS

1. Chemical action in the glow discharge, p. 130
2. Ignition by sparks, p. 132

PART II

PROPAGATION OF FLAMES

Chapter VII. LIMITS OF SELF-PROPAGATION OF
FLAMES (LIMITS OF INFLAMMABILITY), p. 141

Chapter VIII. THE RECORDING OF FLAME MOVE-
MENT AND PRESSURE DEVELOPMENT

1. Flame photography, p. 146
2. Measurement of pressure rise in closed vessels, p. 155

Chapter IX. SPHERICAL FLAMES

1. General remarks on flame movement, p. 160
2. Hydrodynamic pressure distribution in freely expanding spherical flames, p. 160
3. Relation between flame speed and burning velocity, p. 164
4. The flame in a spherical vessel with central ignition, p. 164
5. Re-illumination near the point of ignition in closed-vessel explosions, p. 175
6. Experimental flame speeds and burning velocities from spherical flames, p. 176

Chapter X. THE INFLUENCE OF VESSEL SHAPE AND
GAS MOTION ON FLAME PROPAGATION, p. 184

Chapter XI. STATIONARY FLAMES

1. Formation of a stationary flame above an orifice, p. 193
2. Fixation of flames in tubes, p. 197
3. Factors influencing the shape of the Bunsen cone, p. 198
4. Refraction of the gas flow in the reaction zone and the flow of the burnt gas, p. 201
5. Pressure drop in the reaction zone, p. 202
6. Determination of burning velocities by the Bunsen burner method, p. 203

Chapter XII. THEORY OF THE BURNING VELOCITY, p. 206

Chapter XIII. DIFFUSION FLAMES

1. Description of the phenomenon, p. 220
2. Theory of diffusion flames, p. 221
 - (a) Cylindrical flames, p. 224
 - (b) Flat flames, p. 225
3. Comparison with experiment, p. 229

Chapter XIV. DETONATION

1. Description of the phenomenon, p. 235
2. Theory of impact and detonation waves, p. 237
 - (a) Impact waves in a neutral gas in tubes, p. 239
 - (b) Detonation wave, p. 244
3. Some photographic records of detonations; the phenomena of "spin" and discontinuous progress of the detonation wave, p. 250
4. Calculation of detonation velocity, p. 260

Chapter XV. FLAMES IN ELECTRIC FIELDS, p. 268

PART III

STATE OF THE BURNT GAS

Chapter XVI. THERMODYNAMIC FUNCTIONS OF GASES FROM BAND SPECTROSCOPY

1. Calculation of thermodynamic functions from the spectral term schemes of molecules, p. 269
2. Approximate calculation of thermodynamic functions from fundamental frequencies of molecules, p. 280

Chapter XVII. EXPLOSIONS IN SPHERICAL VESSELS WITH CENTRAL IGNITION

1. The relations between temperature, pressure and dissociation for adiabatic combustion and uniform temperature distribution, p. 285
 - (a) Hydrogen-oxygen explosions, p. 286
 - (b) Carbon monoxide-oxygen explosions, p. 289
 - (c) Methane-oxygen explosions, p. 291
2. The temperature gradient and its effect on the maximum pressure. n. 293

Chapter XVII (continued)

3. Experimental and theoretical explosion pressures in hydrogen-oxygen mixtures, p. 299
4. Explosion pressures of mixtures of oxygen with carbon monoxide and acetylene, p. 307
5. Determination of the energy of dissociation of H_2O into H_2 and OH , p. 310
6. Explosions of ozone-oxygen mixtures, p. 312
7. Gas vibrations in explosions with diluent oxygen and nitrogen, p. 315

Chapter XVIII. FREELY EXPANDING SPHERICAL FLAMES

1. The relations between temperature, flame volume and dissociation for adiabatic combustion, p. 320
2. Explosions of moist carbon monoxide-oxygen mixtures in a soap bubble, p. 321

Chapter XIX. TEMPERATURE AND RADIATION OF THE BURNT GAS

1. Characteristics of thermal radiation, p. 327
2. Experimental investigations of radiation from flames, p. 331
3. Measurement of temperature of stationary non-luminous flames, p. 337
4. Measurement of temperature and emissivity of soot-forming flames, p. 345

PART IV

PROBLEMS IN TECHNICAL COMBUSTION PROCESSES

*Chapter XX. INDUSTRIAL HEATING, p. 349**Chapter XXI. INTERNAL COMBUSTION ENGINES*

1. Engine cycles, p. 351
 - (a) Otto cycle, p. 351
 - (b) Diesel cycle, p. 360
2. Combustion process in the Otto engine, p. 364
3. Combustion process in the Diesel engine, p. 371
4. Rating of fuels, p. 374

Appendix A DATA FOR THERMOCHEMICAL CALCULATIONS

Energy content of gases, p. 378

Equilibrium constants of various reactions and their energies of reaction at absolute zero, p. 380

Heats of combustion, p. 384

Energies of dissociation, p. 385

Bond energies, p. 386

Reactions involving transition of the carbon atom from the quadrivalent 5S state to the bivalent 3P state, p. 386

Appendix B. LIMITS OF INFLAMMABILITY

Limits of inflammability of gases and vapours with air, p. 388

Limits of inflammability of gases and vapours with oxygen, p. 390

Limits of inflammability of mixed gases with air, p. 391

Limits of inflammability of solvent mixtures with air, p. 396

Appendix C. FLAME TEMPERATURES, p. 398

Author Index, p. 403

Subject Index. n. 408
