CONTENTS

PART I

SELECTED ANALYTICAL STUDIES ON EXPLOSIONS, DETONATIONS, FLAMMABILITY LIMITS, AND IGNITION OF GASES, AND ON HETEROGENEOUS BURNING

PAGE

CHAPTER I. FUNDAMENTALS OF AEROTHERMOCHEMISTRY

1. Explosions and Detonations 5
2. Homogeneous Gas Reactions in Isothermal Systems 5
   - A. Interdependent Chemical Reactions 6
   - B. Chain Reactions 7
3. Heterogeneous Chemical Reactions 7
   - A. Physical Adsorption and Chemisorption 7
   - B. Langmuir Adsorption Isotherm 8
   - C. Surface Reactions 8
4. Conservation Equations and the Shvab–Zeldovich Procedure 9
   - A. Conservation Equations 9
   - B. Uniform Representation of the Conservation of Mass and Energy Equations for One-step Chemical Reactions 11
   - C. Classical Solution of Diffusion-flame Problems 13
   - D. Complete Solution for Initially Unmixed Gases with Finite Reaction Rates 14
   - E. Critique of Shvab–Zeldovich Procedure 14
5. Transport Coefficients 15

CHAPTER II. ELEMENTARY THEORY OF EXPLOSION LIMITS FOR PREMIXED GASES IN CLOSED VESSELS WITHOUT SURFACE REACTIONS

6. Thermal and Branched-chain Explosions 17
7. The Semenov Theory of Explosion Limits 17
8. Formal Description of Chain Reactions Involving a Single Chain Carrier 18
9. Chemical Reactions Which are of Zero or First Order With Respect to the Chain Carrier M_F 20
   - A. Chain Carrier Concentration as a Function of Time 21
   - B. Definitions of Various Physically Meaningful Parameters 22
   - C. Induction Period 22
   - D. Concentration of Reaction Products and Measurement of Induction Period 23
   - E. Definition of Chain Length for Non-exploding Mixtures 24
10. Comparison of the Detailed Theory with the Theory of Semenov 24

11. A Qualitative Description of Explosion Limits in Hydrogen–Oxygen Mixtures 26
12. Experimental Procedures 28
13. Qualitative Description of Explosion Limits for Various Gas Mixtures 28

CHAPTER IV. THE QUANTITATIVE THEORY OF CHAIN REACTIONS IN CLOSED VESSELS

14. Introductory Remarks 31
15. Explosions in Which Only Homogeneous Gas Reactions Occur
16. Steady-state Processes with a Single Overall Rate-controlling Reaction 34
17. Non-steady Processes with a Single Overall Rate-controlling Reaction 35
18. Introduction to the Study of Explosion Limits with Surface Reactions 36
19. The Mathematical Theory of Isothermal Explosion Limits 36

CHAPTER V. DETONATION WAVES IN GASES

20. Steady One-dimensional Flow for Premixed Gases with Heat Release 41
21. Characteristic Thermodynamic and Chemical Reaction Times 43
    A. Slow Chemical Reactions, Moderate or High Flow Velocities ($\alpha \ll 1$, $M^2 \sim 1$) 45
    B. Slow Chemical Reactions and Low Flow Velocities ($\alpha \ll 1$, $\alpha/M^2 \sim 1$) 46
22. Steady One-dimensional Flow with Heat Addition 46
23. The Rankine–Hugoniot Curve 47
24. The Chapman–Jouguet Point for Detonation 49
    A. Instability of Strong Detonations 49
    B. Weak Detonations 50
    C. The Brinkley–Kirkwood Stability Arguments 50
    D. Physical State of the Gas at the Chapman–Jouguet Point 51
    E. Thermodynamic Arguments 52
25. The Theoretical Calculation of Detonation Velocities 53
26. The von Neumann–Döring–Zeldovich (NDZ) Model of the Structure of the One-dimensional Detonation Wave 56
    A. One-dimensional, Compressible, Inviscid Flow Neglecting Diffusion and Heat Conduction 57
27. The Detailed Structure of a Detonation Wave 62
28. Transition from Deflagration to Detonation 63
29. Limits of Detonability; Spinning Detonation 64
    A. Limits of Detonability 64
    B. Spinning Detonations 65
30. Spherical and Oblique Detonation Waves 67
31. Miscellaneous Observations and Recent Contributions 68

33. Determination of Measured Flammability Limits and Flame Quenching from Measured Burning Velocities 79
A. Convective Heat Losses and Quenching Limits 80
B. Radiative Heat Losses and Flammability Limits 82
C. Concluding Remarks 83

CHAPTER VII. PRINCIPLES OF IGNITION

34. Spark Ignition of Stagnant Gases 85
A. An Integrated Form of the Energy Equation for One-dimensional, Constant-pressure, Wave Propagation 85
B. Critical Dimension of a Slab of Burnt Gas for Producing a One-dimensional Combustion Wave 86
C. Minimum Ignition Energies 88
D. Ignition Delay and the Mechanism of Ignition Processes 91

35. Spark Ignition of Flowing Gases 91
A. Ignition of Gases in Laminar Flow 92
B. Ignition of Turbulent Gases 92
C. Ignition Energy and Total Energy Input 93
D. Correlation of Data 93

36. Ignition of Stagnant Gases at Heated Surfaces 93

37. Ignition of Gases in a Laminar Mixing Zone 94
A. The Boundary-layer Approximation for Steady Two-dimensional Flow Problems 94
B. Similarity Principles for Lewis Number of Unity 96
C. The Howarth Transformation 97
D. Ignition of Combustible Gases by Heated Gases in a Laminar Mixing Zone 97
E. Diffusion Flames 98
F. Shear-Flow 99

38. Ignition of Flowing Gases at Heated Surfaces 99

CHAPTER VIII. DROPLET BURNING AND HETEROGENEOUS COMBUSTION

39. The Theory for the Burning of Single Droplets for Lewis Number of Unity 101
A. Conventional Diffusion Flame Approximation for $Le =$ 101
B. A Similarity Solution for Droplet Burning 102
C. Concluding Remarks 106

40. Spray Combustion 106

EXPERIMENTAL AND THEORETICAL STUDIES OF FLAMMABILITY, IGNITIBILITY AND EXPLOSION PREVENTION

Chapter IX. Flammability Limits of Homogeneous Fuel–Oxidant Mixtures

PAGE

41. The Concept of Flammability 112
    A. Flammability 112
    B. "Standard" Flammability Apparatus 113
    C. Flammability Limits 115
42. Types of Limits 117
43. Factors Affecting Limits 120
    A. Pressure 120
    B. Temperature 121
    C. Vessel Diameter 122
    D. Vessel Length 123
    E. Direction of Flame Propagation 123
    F. Turbulence 123
44. Calorific Value Correlations 124
45. Weak-limit Flame Temperatures 126
46. Special Phenomena 127
    A. Carbon Monoxide 127
    B. Hydrogen 127
    C. Effect of Water Mist on Rich Mixtures 127
    D. Cool Flames 127
    E. Two-lobe Flammability Diagrams 129
    F. Effect of Fine Solid Particles 129

Chapter X. Flammability Limits of Homogeneous Fuel–Diluent–Oxidant Mixtures

47. G. W. Jones's Graphical Estimation of Limits 134
48. Graphical Methods of Presentation 135
49. Flame Temperatures at Limits 138
50. Combustion with Recirculation 143
51. Successive Combustion 145
52. Flammability Data 147

Chapter XI. Flash-points

53. Flash-point Apparatus 151
54. Flash-points and Weak Flammability Limits 152
55. Flash-points and True Vapour Pressures 162
56. Flash-point Pressure Dependence 163

57. Homodisperse Mists 166
58. Heterodisperse Sprays 169
59. Foams 170
60. Dusts 171

CHAPTER XIII. SPARK IGNITION

61. Types of Spark 175
62. Minimum-ignition-energy Apparatus 176
63. Factors Affecting Minimum Spark-ignition Energies 176
A. Mixture Strength 176
B. Electrode Spacing 177
C. Electrode Material and Configuration 178
D. Electrical Properties of the Spark 179
E. Fuel Type 180
F. Pressure 181
G. Temperature 184
H. Diluents 185
64. Spark Ignition of Flowing Gases 187
A. Effect of Velocity 187
B. Effect of Turbulence 188
C. Combustion Chamber Ignition 188

CHAPTER XIV. SPONTANEOUS IGNITION

65. Fundamental Notions 192
66. Experimental Techniques 193
67. High Temperature Ignition Delay Data 197
68. Engine Applications 209

CHAPTER XV. COMBUSTION PROCESSES

69. Chemical Principles 218
70. Combustion Fundamentals 222
71. Turbulent Combustion 224

CHAPTER XVI. EXPLOSION PREVENTION BY ADDITION OF WATER AND/OR AIR

72. Introduction 230
73. Criterion of Limiting Explosibility 231
74. Addition of Water and/or Air 231
A. Calculation of Air and Water Diluent Quantities 231
B. Weak Mixtures 232
C. Rich Mixtures 234
D. A Note on Water Vapour Addition 235

76. Calculation of Limiting Explosibility with Partial Burning and Cooling by a Heat Exchanger 239
A. Atmospheric Pressure 239
B. Sub-atmospheric Pressures 242
77. Use of Water Alone 247
A. Monodisperse Mists 247
B. Heterodisperse Sprays 249
78. Estimation of Limiting Safe Fuel–Air Ratios at Various Initial Temperatures and Pressures 255

CHAPTER XVII. EXPLOSION PREVENTION BY OTHER MEANS

79. Addition of Other Substances 259
A. Inert Gases 259
B. Aqueous Foam 260
C. Organic Halides 261
D. Inert Dust 264
80. Use of Flame Arresters 267
81. Use of Explosion Vents 270

ACKNOWLEDGEMENTS

THE following acknowledgements are additional to those made in the General Introduction.

For granting permission to reproduce various tables and figures, we wish to thank the authors and publishers of the journals and books concerned, for example, the following gentlemen: H. Billett, R. S. Brokaw, J. H. Burgoyne and co-workers, H. F. Calcote, J. T. DiPiazza, G. von Elbe, J. B. Fenn, R. P. Fraser, M. Gerstein, J. O. Hirschfelder and co-workers, J. L. Jackson, Th. von Kármán, J. G. Kirkwood, P. Laffitte, J. W. Linnett, B. Lewis and co-workers, P. Lloyd, J. P. Longwell and co-workers, R. E. Miller, T. W. Reynolds, R. F. Simmons, A. E. Spakowski, E. S. Starkman, C. C. Swett Jr., Y. Tanasawa, D. T. A. Townend, E. A. Watson, H. G. Wolfhard, W. W. Wood, M. G. Zabetakis; we also thank the following organizations: Academic Press Inc., American Chemical Society, American Institute of Physics, American Society of Mechanical Engineers, Butterworths Scientific Publications Ltd., Combustion Institute, Controller of H.M. Stationery Office (Figs. 77.3 and 79.1–79.5), Department of Scientific and Industrial Research and Fire Offices' Committee, Institution of Mechanical Engineers, Institute of Petroleum, Reinhold Publishing Corpn., Royal Society, John Wiley & Sons, and Williams & Wilkins Co.
