C. THERMODYNAMICS

12. Electrochemical Knudsen Cells for Investigating the Thermodynamics of Vapours H. RICKERT

Summary	519
I. Introduction	520
II. The Knudsen cell	520
III. The solid state galvanic cell Pt/Ag/AgJ/Ag ₂ S/Pt	521
IV. Thermodynamic properties of the solid state cell Pt/Ag/AgJ/Ag ₂ S/Pt	522
V. Kinetic properties of the galvanic cell (I)	524
VI. The electrochemical Knudsen cell	526
VII. Combination of an electrochemical Knudsen cell with a mass spectrometer for the study of the thermodynamics of sulphur vapour	528
VIII. Experimental details	533
IX. Measurements on selenium vapour	534
References	538

13. Oxygen Concentration Cells K. S. GOTO and W. PLUSCHKELL

I. Introduction	540
II. Electromotive forces of oxygen concentration cells	541
III. Special electrolytes	550
IV. Possible experimental errors in electromotive force measurements	563
V. Applications to thermodynamic studies	574
VI. Applications to kinetic studies	593
VII. Conclusions	613
Acknowledgement	614
References	614

14. Electrochemical Cells with Non-Oxygen Conductivity Y. D. TRETYAKOV and A. R. KAUL	
I. Introduction	623
II. Anion-conductive solid electrolytes	627
III. Cation-conductive solid electrolytes	651
References	673
15. Non-Stationary E.M.F. Measurements G. B. BARBI	
I. Introduction	679
II. E.m.f. measurements	681
III. Galvanic cells in non-stationary conditions	683
IV. Reliability of the non-stationary e.m.f. measurements	692
V. Non-stationary determination of the thermodynamic stability of the intermetallic phases	693
VI. Future developments—observations	696
References	697
16. Thermal Diffusion in Ionic Crystals J. DUPUY	
Introduction	699
I. Theoretical aspects	700
II. Experimental studies	707
III. Information on heats of transport given by thermocells $M'/MX/M'$	737
Acknowledgements	742
List of symbols	743
References	743
17. Thermodynamic Equilibrium Diagrams W. I. WORRELL and J. HLADIK	
I. Introduction	747
II. Pourbaix–Ellingham diagrams	747
III. Pourbaix diagrams	751
References	759
18. Comparison between Electrode Potentials in Solid and Liquid Electrolytes J. HLADIK	
I. Universal reference electrode	799
II. Comparison between potentials in aqueous and molten media	800
III. Comparison between potentials in aqueous and solid media	801
References	806

D. ELECTRODE PROCESSES**19. Solid State Cells, Impedance and Polarisation K. O. HEVER**

I. Introduction	809
II. Linear polarisation effects	821
III. Non-linear polarisation effects	827
IV. Conclusion	833
V. Appendix	835
References	836

20. Reference Electrodes J. HLADIK

I. Reference electrodes properties ..	839
II. Gas electrodes	844
III. Metal electrodes	854
IV. Comparison electrodes	860
References	865

21. Chronoamperometry, Potential-Sweep Chronoamperometry and Chronopotentiometry J. HLADIK

I. Electroanalytical techniques	867
II. Electroactive species dissolved in the supporting electrolyte	872
III. Electroactive species dissolved in the electrode	900
IV. Electroactive species reacting at the three-phase boundary	905
V. Thin films of electroactive species	914
VI. Chronopotentiometry	918
References	928

22. Coulometry J. H. KENNEDY

I. Introduction	931
II. Silver bromide	933
III. Silver sulphide iodide (Ag_3SI)	936
IV. Silver sulphide bromide (Ag_3SBr)	938
V. Rubidium Silver iodide (RbAg_4I_5)	946
VI. Thin-film coulometers	949
VII. Coulometry with other solid electrolytes	950
VIII. Coulometric titrations	953
IX. Applications	955
Acknowledgement	955
References	956

E. ENERGETICS AND PHOTO-ELECTROCHEMICAL PHENOMENA**23. Cells and Storage Batteries R. T. FOLEY**

I. Historical development	960
-----------------------------------	-----

II. Solid electrolytes suitable for galvanic cells	963
III. Anodic reactions	973
IV. Cathodic reactions	974
V. Rechargeability and reversibility	975
VI. Construction of solid electrolyte galvanic cells	981
VII. Application of solid electrolyte cells ..	983
VIII. Conclusions	985
References	985
24. Solid Electrolyte Fuel Cells (Theoretics and Experiments)	
T. TAKAHASHI	
I. Introduction	989
II. Solid electrolytes for fuel cells	990
III. Electrode processes in solid oxide electrolyte systems	1016
IV. Solid electrolyte high temperature fuel cells	1020
References	1046
25. Photo-Electrochemical Phenomena A. C. H. VAN PESKI, J. SCHOONMAN and D. A. DE VOOYS	
Introduction	1052
I. The latent-image formation and photolysis of silver halides	1052
References	1069
II. The photochemical decomposition of lead chloride and lead bromide	1070
References	1090
III. The electrode photoeffect of metals in an electrolyte solution	1091
References	1100
Appendix. Tables of Ionic Conductivity and Diffusion in Ionic Crystals R. J. FRIAUF	1103
