Preface	page vii
1 Introduction	1
2 Theory of membrane potentials	6
2.1 General relations	6
2.2 Liquid-junction potential	9
2.3 The Donnan potential	18
2.4 Potentials of permselective membranes	21
2.5 Fixed charge ion-exchanger membranes (compact membranes with internal diffusion potential)	25
2.6 Liquid membranes with dissolved charged ion exchangers	32
2.7 Solid-state membranes without inner diffusion potential	37
3 Basic properties of ion-selective electrodes	44
3.1 The potential of ion-selective electrodes	45
3.2 Construction of ion-selective electrodes	48
3.3 Calibration of ion-selective electrodes	58
3.4 The selectivity constant (coefficient)	64
4 Analytical applications of ion-selective electrodes	68
4.1 The response time, temperature coefficient, and drift of ion-selective electrodes	68
4.2 Direct potentiometry	72
4.3 Ion monitoring by means of ion-selective electrodes	76
4.4 Potentiometric titrations	83
5 Ion-selective electrodes with fixed membrane sites	87
5.1 Silver halide ion-selective electrodes	87
5.2 Metal sulphide and divalent metal chalcogenide electrodes	94
5.3 Fluoride ion-selective electrodes	99
5.4 Glass electrodes	105
5.5 Miscellaneous systems	113

Contents

6	Ion-selective electrodes with liquid membranes and ionized ion exchangers	<i>page</i> 116
6.1	Basic properties, the selectivity and extraction parameters	116
6.2	The calcium and related electrodes	110
6.3	Sites with aromatic and pseudoaromatic character; the nitrate and potassium and related electrodes	126
6.4	Sites of the quaternary ammonium cation type	133
6.5	Other systems	134
7	Ion-selective electrodes with electroneutral macrocyclic ion carriers	136
7.1	The properties of macrocyclic ion carriers	136
7.2	Membrane phenomena with participation of macrocyclic ion carriers	153
7.3	Properties of ion-selective electrodes with macrocyclic ion carriers	167
8	Enzyme electrodes	174
	References	177
	Index	205
