

# *contents*

## **1 *Fundamental Principles and Conventions, 1***

- Reversible Cells and Potential, 1
- Chemical Potential and Activity, 6
- Hydrogen Ion Equilibria, 11
- Conventions of E.M.F. Measurements, 13

## **2 *Definitions of pH Scales, 17***

- Rational Scales of Acidity, 18
- Hydrogen Ion Concentration, 19
- The Sørensen pH Scale, 20
- Hydrogen Ion Activity, 23
- Thermodynamic Scales of pH, 25
- Determination of Hydrogen Ion Concentrations by E.M.F. Methods, 28
- Choice of a Standard pH Unit for Reference Solutions, 29
- Operational Definition of the Measured pH, 31
- Limitations of the pH, 32

## **3 *Liquid-Junction Potentials and Ionic Activities, 34***

- Individual Ionic Activity Coefficients, 35
- Calculation of the Liquid-Junction Potential, 39
- Elimination of the Liquid-Junction Potential, 47

*xii Contents*

Estimation of Ionic Activity Coefficients, 50  
Ionic Activities and Cells without Liquid Junction, 54  
The Residual Liquid-Junction Potential, 58

**4 *pH Standards, 62***

The Standard Potential, 63  
The Cohn Method of pH Standardization, 66  
 $p_{aH}$  of Reference Solutions, 71  
Assignment of pH(S) Values to NBS Standards, 75  
Equimolal Phosphate Buffer Solutions, 78  
Phthalate Buffer Solutions, 82  
Borax Buffer Solutions, 83  
Tartrate Buffer Solutions, 85  
Standards for pH Measurements of Blood, 86  
Internal Consistency of the Standard Scale, 87  
Secondary Standards, 88  
Interpretation of pH, 91  
The British Standard pH Scale, 93  
The Japanese Standard pH Method, 94

**5 *Buffer Solutions, 95***

Buffer Action, 95  
The Buffer Value, 97  
Dilution Effects, 101  
Salt Effects, 108  
 $p_{aH}$  and Temperature, 112  
Effect of Pressure Changes, 117  
Buffers for pH Control, 117  
NBS Standard Buffer Solutions, 123

**6 *Measurements of Acidity with Indicators, 131***

Behavior of Acid-Base Indicators, 132  
Detailed Treatment of Indicator Equilibria, 141  
Colorimetric Techniques for pH Measurement, 155  
Indicator Test Papers, 164  
Limitations of Indicator Measurements, 165  
The Hammett Acidity Function, 167

**7 Acidity and Basicity in Nonaqueous Solutions, 172**

- Concepts of Acids and Bases, 172
- The Hydrogen Ion, 177
- Acidity Potential and Proton Activity, 180
- Medium Effects on Ionic Processes, 189

**8 pH and Other Acidity Functions for Nonaqueous Media, 201**

- Medium Effect for Hydrogen Ion, 201
- Hammett Acidity Functions, 206
- Oxidation-Reduction Potentials, 207
- Acidity Functions in Alcohol-Water Mixtures, 210
- Acidity in Acetic Acid, 215
- Acidity in Other Solvent Media, 218
- Relative Hydrogen Ion Activity, 220
- Standard pH Scale for Alcoholic Media, 222

**9 Cells, Electrodes, and Techniques, 230**

- The Hydrogen Electrode, 230
- The Quinhydrone Electrode, 246
- The Antimony Electrode, 252
- Other Hydrogen Ion Electrodes, 257
- Calomel Reference Electrodes, 258
- Silver-Silver Chloride Electrodes, 279
- Thallium Amalgam-Thallos Chloride Electrode, 286
- Temperature Coefficients of Cells and Electrodes, 286

**10 Glass Electrodes, 289**

- ✓ The pH Response, 290
  - Structure of Electrode Glasses, 293
  - Hygroscopicity and pH Response, 296
  - Chemical Durability and Voltage Departures, 299
- ✓ Electrical Resistance, 302

*xiv Contents*

- Composition of Electrode Glasses, 308
- The Asymmetry Potential, 310
- Development of the Surface Potential, 313
- The Alkaline Error, 315
- The Acid Error, 319
- Cation-Responsive Glass Electrodes, 322
- The Glass Electrode in Nonaqueous and Partially Aqueous Media, 324
- Internal Reference Cells, 325
- Commercial Glass Electrodes, 330
- Care of Glass Electrodes, 333

**11 Measurement of Electromotive Force. The pH Meter, 339**

- Potentiometers, 339
- Galvanometers, 341
- Standard Cells, 342
- Types of pH Meter, 347
- Amplifiers and Their Characteristics, 348
- Operation of a Typical Potentiometric Meter, 355
- Commercial pH Meters, 359
- Grid Current, 361
- Effect of Humidity, 364
- Temperature Effects, 364
- ✓ Standard Cell of the pH Meter, 369
- Performance Tests, 370
- Adjustments and Repairs, 374
- Determination of pH Values, 376
- Automatic Titrators, 381
- pH-stats, 382

**12 Industrial pH Control, 384**

- Cell Assemblies, 384
- ✓ Electrodes, 388
- Amplifiers, Recorders, and Controllers, 391
- Principles of Automatic Control, 394
- ✓ Buffer Action in pH Control, 398
- Final Control Elements, 399
- Industrial Installations, 400

**Appendix, 403**

- Table 1. Values of  $(RT \ln 10)/F$  from 0 to 100°, 403
- Table 2. Ion Product  $K_w$  of Water from 0 to 60°, 404
- Table 3. Vapor Pressure, Density, and Dielectric Constant of Water  
Constant of Water from 0 to 100°, 405
- Table 4. Constants of the Debye-Hückel Theory from 0 to 100°, 406
- Table 5. Dielectric Constants  $D$  of Pure Liquids, 407
- Table 6. Approximate pH of Some Common Reagent Solutions near  
Room Temperature, 408
- Table 7.  $p(a_{H^+Cl})$  for Some Useful Solutions from 0 to 60°, 409

**Author Index, 417****Subject Index, 427**
