CHAPTER

1. FUNDAMENTAL PRINCIPLES AND CONVENTIONS	1
Reversible Cells and Potential	1
Chemical Potential and Activity	5
Hydrogen Ion Equilibria	11
Conventions of E.M.F. Measurements	12
2. DEFINITIONS OF pH SCALES	16
Rational Scales of Acidity	17
Hydrogen Ion Concentration	18
The Sørensen pH Scale	19
Hydrogen Ion Activity	22
Thermodynamic Scales of pH	24
Determination of Hydrogen Ion Concentrations by E.M.F. Meth- ods	28
Choice of a Standard pH Unit for Reference Solutions	28
Practical Definition of the Measured pH	31
Limitations of the pH	32
3. LIQUID-JUNCTION POTENTIALS AND IONIC ACTIVITIES	34
Individual Ionic Activity Coefficients	35
Calculation of the Liquid-Junction Potential	40
Elimination of the Liquid-Junction Potential	45
Estimation of Ionic Activity Coefficients	48
Ionic Activities and Cells without Liquid Junction	52
The Residual Liquid-Junction Potential	58
4. ESTABLISHMENT OF pH STANDARDS	62
The Standard Potential	63
The Cohn Method of pH Standardization	66
pH of Reference Solutions	71
Assignment of pH Values to NBS Standards	73
Equimolar Phosphate Buffer Solutions	75
Phthalate Buffer Solutions	80
Borax Buffer Solutions	81
Tartrate Buffer Solutions	83
Tetroxalate Buffer Solutions	85

Secondary Standards	88
Interpretation of the Practical pH	88
The British Standard pH Scale	80
5. BUFFER SOLUTIONS	91
Buffer Action	91
The Buffer Value	93
Dilution Effects	97
Salt Effects	104
pH and Temperature	108
Effect of Pressure Changes	112
Buffers for pH Control	113
The NBS Standard Buffer Solutions	118
6. QUANTITATIVE ASPECTS OF ACIDITY AND BASICITY IN NONAQUEOUS SOLUTIONS	122
Concepts of Acids and Bases	122
Acid-Base Potentials	128
Ionic Processes and the Dielectric Constant	134
Acidity Scales	144
Electrometric Determination of Acidity in Nonaqueous Media	150
7. CELLS, ELECTRODES, AND TECHNIQUES	156
The Hydrogen Electrode	156
The Quinhydrone Electrode	169
The Antimony Electrode	175
The Glass Electrode	179
Other Hydrogen Ion Electrodes	183
Calomel Reference Electrodes	184
Silver-Silver Chloride Electrodes	202
Temperature Coefficients of Cells and Electrodes	208
8. PROPERTIES OF GLASS ELECTRODES	212
The pH Response	212
Structure of Electrode Glasses	214
Hygroscopicity and pH Response	217
Chemical Durability and Voltage Departures	220
Electrical Resistance	223
The Asymmetry Potential	230
Composition of Electrode Glasses	232
Development of the Surface Potential	225

Care of Glass Electrodes	241
9. MEASUREMENT OF ELECTROMOTIVE FORCE. THE pH METER	253
Potentiometers	253
Galvanometers	255
Standard Cells	257
Types of pH Meter	261
Potentiometric or Slide-Wire Circuits	263
Direct-Reading Meters	268
The Vibrating Reed Electrometer	271
European pH Meters	275
Grid Current	276
Electrometer Tubes	278
Effect of Humidity	280
Temperature Effects	281
Standard Cell of the pH Meter	285
Performance Tests	285
Adjustments and Repairs	289
Determination of pH Values	291
Automatic Titrators	295
10. AUTOMATIC pH CONTROL	297
Cell Assemblies	297
Electrodes	300
Amplifiers, Recorders, and Recorder-Controllers	301
Principles of Automatic Control	304
Buffer Action in pH Control	307
Final Control Elements	308
Industrial Installations	310
APPENDIX	313
Table 1. Values of $2.30259RT/F$ from 0 to 100°	313
Table 2. Ion Product, K_w , of Water from 0 to 60°	314
Table 3. Vapor Pressure of Water from 0 to 100°	314
Table 4. Constants of the Debye-Hückel Theory from 0 to 100°	315
Table 5. Dielectric Constants (D) of Pure Liquids	316
Table 6. Approximate pH of Some Common Reagent Solutions near Room Temperature	317
AUTHOR INDEX	319
SUBJECT INDEX	325
