FOREWORD TO FIRST EDITION	vii
FOREWORD TO SECOND EDITION	ix
FOREWORD TO THIRD EDITION	x
ILLUSTRATIONS	xiii
1. PRINCIPLES OF CHEMISTRY	1
Atoms – elements – compounds – molecules – chemical formulae – molecular weight – chemical nomenclature – states of matter – solutions – valency – equivalent weight – ions – Faraday's Laws – hydrogen ion – metals.	
2. PRINCIPLES OF CHEMICAL ANALYSIS	21
Qualitative analysis – quantitative analysis – standard solutions – volumetric analysis – gravimetric analysis.	
3. PRINCIPLES OF ELECTRICITY	30
Electric current – ampere – volt – ohm – coulomb – watt – mho – alternating current – dynamo – rectifier – heating effect of electricity – control and measurement of electricity – ammeter – voltmeter – current control.	
4. PRINCIPLES OF ELECTROCHEMISTRY	43
Electrolytic cell – migration of ions – diffusion – agitation and circulation – Faraday's Laws – current efficiency – calculations based on Faraday's Laws – cathode efficiency – anode efficiency – polarization – throwing power – covering power – variables in the electroplating cell – voltage – current density – temperature – circulation – agitation – addition agents – brighteners.	
5. CLEANING AND PREPARATION	63
Massive dirt – removal of grease layer – solvent degreasing – saponification and emulsification – electrolytic cleaning – wetting the surface – oxide layers; pickling – preliminary deposition processes – importance of correct preparation.	
6. PROPERTIES OF ELECTRODEPOSITS	72
Strength – Brinell hardness – Vickers pyramid hardness – measuring hardness – ductility – other properties.	

7. UNITS OF HEAT	76
8. PLATING CALCULATIONS	79
Surface areas – rectangle – triangle – circle – cylinder – oval – diamond – parallelogram – trapezium – regular polygon – sector of a circle – cone – frustum of cone – irregular shapes – screw threads – volume – weights and densities – solution make-up – electrical calculations.	
APPENDIX 1: SAFETY PRECAUTIONS	99
Cyanide – concentrated acids and alkalis – first aid.	
10. APPENDIX 2: EDUCATIONAL FACILITIES	
APPENDIX 3: TABLES	104
Units – conversion factors – specific gravity conversions – common substances – strengths of acids and ammonia – electrochemical and physical constants – electrochemical series.	
12. APPENDIX 4: GLOSSARY OF COMMON SCIENTIFIC AND TECHNICAL TERMS USED IN ELECTROPLATING	114
13. APPENDIX 5 READING LIST OF BOOKS ON METAL FINISHING	

LIST OF TABLES

1. The commoner elements	3
2. Concentration of standard volumetric solutions	27
3. Electrodeposition of metals	
4. Units	104
5. Miscellaneous conversion factors	105
6. Specific gravity conversion	107
7. Common substances	108
8. Strengths of the commonly used acids and of ammonia	

9. Electrochemical and physical constants of elements of importance in electroplating	112
10. Electrochemical series of elements of importance in electroplating	113

LIST OF ILLUSTRATIONS

	<i>page</i>
1. Pipette	26
2. Burette	26
3. Principle of construction of a dynamo	38
4. Diagram of single phase full wave rectifier	39
5. Arrangement of current supply to electroplating plant	42
6. Surface area of rectangle	
7. Surface area of rectangular plate	85
8. Surface area of triangle	85
9. Surface area of triangular plate	85
10. Surface area of circle	85
11. Surface area of circular plate	85
12. Surface area of sphere	86
13. Surface area of cylinder	86
14. Surface area of oval	86
15. Surface area of oval plate	86
16. Surface area of diamond	86
17. Surface area of parallelogram	86
18. Surface area of trapezium	86
19. Surface area of hexagon	87
20. Area of a sector of a circle	87
21. Surface area of hollow and solid cones	87
22. Surface area of frustum of hollow or solid cone	87
23. Surfaces of complicated shape split into simpler shapes	88
24. Surfaces of complicated shape treated as the difference of two areas	88
