

# Contents

Contributors . . . . .	IX
Preface . . . . .	XI
Introduction . . . . .	XV
<b>1. Theory of electromigration processes (J. Vacík) . . . . .</b>	<b>1</b>
Introduction . . . . .	1
Equilibria in electrophoretic systems . . . . .	2
Processes in electrophoretic systems . . . . .	8
Mathematical description of the electrophoretic process . . . . .	18
References . . . . .	20
<b>2. Classification of electromigration methods (J. Vacík) . . . . .</b>	<b>23</b>
Introduction . . . . .	23
Zone electrophoresis . . . . .	24
The moving boundary method . . . . .	26
Isotachopheresis . . . . .	27
Focusing methods . . . . .	29
Combined methods . . . . .	33
References . . . . .	37
<b>3. Evaluation of the results of electrophoretic separations (J. Vacík) . . . . .</b>	<b>39</b>
Introduction . . . . .	39
Determination of mobility . . . . .	40
Principles of quantitative evaluation . . . . .	42
<b>4. Molecular size and shape in electrophoresis (Z. Deyl) . . . . .</b>	<b>45</b>
Introduction . . . . .	45
Elimination of charge differences . . . . .	49
Choice of standard series . . . . .	61
Molecular size determination by pore limit electrophoresis . . . . .	62
Determination of Stokes radii by rheopheresis . . . . .	63
References . . . . .	66
<b>5. Zone electrophoresis (except gel-type techniques and immunoelectrophoresis)</b> <b>(W. Ostrowski) . . . . .</b>	<b>69</b>
Paper techniques . . . . .	70
Thin-layer electrophoresis . . . . .	96
References . . . . .	103
<b>6. Gel-type techniques (Z. Hrkal) . . . . .</b>	<b>113</b>
Introduction . . . . .	113
Theory of gel electrophoresis . . . . .	114
Starch gel electrophoresis . . . . .	116

Acrylamide gel electrophoresis . . . . .	117
<b>Agarose</b> gel electrophoresis . . . . .	128
<b>Agarose-acrylamide</b> composite gels . . . . .	129
References. . . . .	130
7. Quantitative immunoelectrophoresis (P. J. Svendsen) . . . . .	133
Introduction. . . . .	133
Chemicals and solutions . . . . .	134
Apparatus and accessories . . . . .	136
<b>Practical</b> application . . . . .	139
References. . . . .	153
8. Moving boundary electrophoresis in narrow-bore tubes (F. M. Everaerts and J. L. Beckers) . . . . .	155
Introduction. . . . .	155
Principles of moving boundary electrophoresis . . . . .	156
Practical application . . . . .	160
State of the art and comparison with other techniques. . . . .	162
References. . . . .	165
9. Isoelectric focusing (N. Catsimpoalas) . . . . .	167
Principle. . . . .	167
Theoretical aspects . . . . .	168
Carrier ampholytes . . . . .	170
Support media. . . . .	171
Geltubes. . . . .	172
Thinlayers. . . . .	173
Density gradient. . . . .	175
Free solution . . . . .	176
Twodimensional methods. . . . .	176
Immunoisoelectricfocusing . . . . .	176
Transient state isoelectric focusing . . . . .	179
Conclusions . . . . .	190
References. . . . .	190
10. Analytical isotachopheresis (J. <b>Vacik</b> and F. M. Everaerts) . . . . .	193
Introduction. . . . .	194
Theoretical. . . . .	195
Quality and quantity in isotachopheresis . . . . .	206
Instrumentation. . . . .	208
Practical application . . . . .	218
References. . . . .	224
11. Continuous flow-through electrophoresis (Z. <b>Prusik</b> ). . . . .	229
Introduction. . . . .	229
General aspects . . . . .	231
Electrophoretic cells of other shapes . . . . .	235
Factors affecting zone width in flow-through cells . . . . .	235
References. . . . .	250
12. Continuous flow deviation electrophoresis (A. Kolin) . . . . .	253
Introduction. . . . .	253
Theoretical aspects of continuous flow deviation electrophoresis. . . . .	255
Modes of implementation of continuous flow deviation electrophoresis. . . . .	261
Flat fluid band electrophoresis ("free-flow" electrophoresis) . . . . .	261

Endless fluid belt electrophoresis . . . . .	267
Conclusion . . . . .	295
Acknowledgements . . . . .	295
Symbols and units . . . . .	296
References . . . . .	296
13. Preparative electrophoresis in gel media ( <b>Z. Hrkal</b> ) . . . . .	299
Introduction . . . . .	299
Gel composition and concentration . . . . .	299
Gel dimensions and sample load . . . . .	300
Voltage gradient and the electrophoresis time . . . . .	300
Duration of electrophoresis and flow-rate . . . . .	301
References . . . . .	305
14. Preparative electrophoresis in columns ( <b>P. J. Svendsen</b> ) . . . . .	307
Introduction . . . . .	307
Apparatus . . . . .	308
Practical application and procedures . . . . .	315
References . . . . .	324
15. Preparative isoelectric focusing ( <b>P. Blánický</b> ) . . . . .	327
Introduction . . . . .	328
General aspects . . . . .	328
Preparative isoelectric focusing technique . . . . .	332
Conclusion . . . . .	341
References . . . . .	342
16. Preparative isotachopheresis ( <b>P. J. Svendsen</b> ) . . . . .	345
Introduction . . . . .	345
Chemicals and solutions . . . . .	346
Apparatus . . . . .	348
Practical application . . . . .	355
References . . . . .	362
17. Preparative isotachopheresis on the micro scale ( <b>L. Arlinger</b> ) . . . . .	363
Introduction . . . . .	363
Small-scale preparative isotachopheretic methods . . . . .	364
Principle of preparative capillary method . . . . .	365
Applications of preparative capillary method . . . . .	370
References . . . . .	376
List of frequently occurring symbols . . . . .	379
Subject index . . . . .	385
