PREFACE

The Schrödinger Two-Electron Atomic Problem

EGIL A. HYLLEAAS

I. Introduction	1
II. The Early States of the Helium Problem	2
III. Advanced Methods in the Theory of Two-Electron Systems	15
References	33

Energy Band Calculations by the Augmented Plane Wave Method

J. C. SLATER

I. The Method and Its Development	35
II. The Accuracy of the Method, and Comparison with Other Methods	38
III. The Determination of the Potential	41
IV. Results of Augmented Plane Wave (APW) Calculations	45
References	57

Spin-Free Quantum Chemistry

F. A. MATSEN

I. Introduction	60
II. The Concept of Chemical Structure	61
III. The Spin-Free Formulation of Quantum Chemistry	75
IV. Finite Group Algebras and Quantum Mechanics	89
V. The Permutation Algebra	95
VI. The Conventional Formulation	106
References	113

On the Basis of the Main Methods of Calculating Molecular Electronic Wave Functions

R. DAUDEL

I. Some Mathematical Requirements	115
II. Physical Aspects of the Problem	119

Contents

III. Orbitals and Biorbitals (or Geminals)	126
IV. Concluding Remarks	141
References	143

Theory of Solvent Effects on Molecular Electronic Spectra

SADHAN BASU

I. Introduction	145
II. Perturbation Theory for Solvent-Solute Interaction	147
III. Onsager Model for Solvent-Solute Systems	149
IV. Reduction of the Perturbation Energy Expression	151
V. General Discussion of Solvent Effect in Nonpolar Solvent	157
VI. Experimental Verification	162
VII. Solvent Shift in Mixed Solvents	162
VIII. Solvent Shift in Polar Solvents	163
IX. Solvent Effect on Emission Spectra	164
X. Solvent Shift and Excited State Dipole Moment	164
XI. Solvent Effect on the Intensity of the Absorption Band	165
XII. Concluding Remarks	167
References	169

The Pi-Electron Approximation

PETER G. LYKOS

I. Introduction	---
II. Quantum Mechanical Foundation	---
III. Semiempirical Theory: The Over-all Structure	180
IV. Semiempirical Theory: The Parameters	185
V. Areas of Application, Old and New	190
VI. Conclusion	197
References	199

Recent Developments in the Generalized Hückel Method

Y. I'HAYA

I. Introduction	203
II. Outline of the Generalized Hückel Method	204
III. General Criticisms and Some Improvements on the Generalized Hückel Method	207
IV. Ethylene as a Two-Electron Problem	212
V. Ethylene as a Four-Electron Problem	222
VI. Two-Center Electronic Repulsion Integrals	233
VII. Further Applications to Larger Molecules	235

VIII. Concluding Remarks	237
References	239

Accuracy of Calculated Atomic and Molecular Properties

G. G. HALL

I. Introduction	241
II. The Double Perturbation Expansion	242
III. The <i>F</i> -Function Technique	245
IV. The First-Order Density Matrix	247
V. Stable Wave Functions	249
VI. Some Illustrative Results	251
VII. Conclusions	253
References	254

Recent Developments in Perturbation Theory

JOSEPH O. HIRSCHFELDER, W. BYERS BROWN, and SAUL T. EPSTEIN

I. Introduction	256
II. Rayleigh-Schrödinger Perturbation Theory for a Nondegenerate State	265
III. Solution of Perturbation Equations	269
IV. Expectation Values and Double Perturbation Theory	284
V. General Connections between Perturbation Theory and the Variational Principle	298
VI. The FOPIM (First-Order Perturbation Iteration Method) and FOP-VIM (First Order Perturbation-Variation Iterative Method) Fast-Converging Iteration Procedures	307
VII. Degenerate or Almost Degenerate Energy Level Perturbations	312
VIII. Off-Diagonal Matrix Elements	315
IX. Time-Dependent Perturbation Theory	319
X. Sum Rules and the Calculation of Sums	325
XI. Applications	341
XII. Existence and Convergence of the Perturbation Series (by Theodore W. Palmer)	349
References	369
