

CONTENTS

PREFACE	vii
Chapter 1—Chemical Engineering Aspects of Nuclear Power	1
1. Introduction	1
2. Nuclear Fission	1
3. Nuclear Fuels	6
4. Other Reactor Materials	8
5. Fuel-processing Flow Sheets	9
6. Chemical Processes of Nuclear Power Industry	12
7. Separation of Reactor Products	16
8. Conclusion	19
References	19
Chapter 2—Nuclear Reactions	20
1. Nuclides	20
2. Radioactivity	23
3. Decay Chains	28
4. Neutron Reactions	37
5. The Fission Process	44
6. Growth and Decay of Fission Products in a Reactor with Neutron Burnout and Continuous Processing	49
Nomenclature	58
References	59
Bibliography	60
Problems	60
Chapter 3—Fuel Cycles in Thermal Nuclear Reactors	65
1. Make-up of Reactor	65
2. Reactor Fuel-process Flow Sheets	66
3. Irradiation Schemes	69
4. Neutron Balance	71
5. Feed Requirements and Fuel Burnup for Completely Mixed Fuel—No Recycle	77
6. Feed Requirements and Fuel Burnup for Completely Mixed Fuel—Plutonium Recycle	87
7. Feed Requirements, Burnup, and Reactivity Changes for Unmixed Fuel	91
8. Comparison of Burnup for Mixed and Unmixed Fuel	113
9. Flow Sheets for U^{235} , U^{238} Fuel Cycles	114
10. Single-region Thorium Breeder	115
Nomenclature	123
References	125

Bibliography	
Problems	
Chapter 4—Production of Uranium Feed Materials	
1. Properties of Uranium	
2. Radioactive Contaminants in Natural Uranium	
3. Natural Occurrences of Uranium	
4. Concentration of Uranium	
5. Purification of Uranium	
6. Conversion to UF_4	
7. Production of Pure Uranium Metal	
8. Production of UF_6	
References	
Problems	
Chapter 5—Zirconium, Thorium, and Beryllium	
1. Zirconium and Hafnium	
2. Thorium	
3. Beryllium	
References	
Problems	
Chapter 6—Solvent Extraction of Metals	
1. Applications	
2. Solvent-extraction Principles	
3. Distribution Coefficients	
4. Solvent Requirements	
5. Theory of Fractional Extraction	
6. Solvent-extraction Equipment	
7. References on Solvent Extraction	
Nomenclature	
References	
Problems	
Chapter 7—Properties of Irradiated Fuel	
1. Separations to Be Performed	
2. Decay Period for Irradiated Uranium	
3. Decay Period for Irradiated Thorium	
4. Fission-product Composition	
5. Gaseous Fission Products	
6. Decontamination Required	
7. Fission-product Poisons	
8. General Properties of the Rare Earths and Actinide Elements	
9. Properties of Plutonium	
10. Oxidation-Reduction Potentials	
Nomenclature	
References	
Bibliography	
Problems	
Chapter 8—Separation of Reactor Products	
1. Processes to Be Considered	

CONTENTS

xiii

2. Fuel-element Dissolution	304
3. Precipitation Process	309
4. Ion Exchange	312
5. Summary of Solvent-extraction Processes	313
6. Redox Process	313
7. Purex Process	320
8. TTA-chelation Process	332
9. U ²³⁵ -Hexone Process	334
10. U ²³⁵ -TBP Process	335
11. Thorex Process	337
12. Summary of Nonaqueous Processes	341
13. Fluoride Distillation	344
14. Liquid-metal Extraction	348
15. Fused-salt Extraction	349
16. Vacuum Volatilization	352
17. Oxidative Slagging	354
18. Electrorefining	356
References	356
Problems	358
 Chapter 9—Uses of Stable Isotopes and Methods of Isotope Separation	 361
1. Uses of Separated Isotopes	361
2. Methods Used for Isotope Separation	365
3. Electromagnetic Method	372
References	376
Problem	377
 Chapter 10—Principles of Isotope Separation	 378
1. Terminology	378
2. General Cascade Equations	383
3. The Ideal Cascade	386
4. Close-separation Cascade	394
5. Separative Duty and Separation Potential	396
Nomenclature	404
References	405
Problems	405
 Chapter 11—Separation of Isotopes of Light Elements	 407
1. Separation Factor in Distillation	407
2. Distillation of Liquid Hydrogen	409
3. Distillation of Water	413
4. Electrolysis of Water	431
5. Electrolysis and Steam-Hydrogen Exchange	440
6. Dual-temperature Deuterium-exchange Processes	453
7. Exchange Processes for Elements Other than Hydrogen	462
Nomenclature	467
References	468
Problems	469
 Chapter 12—Separation of Isotopes of Heavy Elements	 472
1. Methods Available	472

2. Mass Diffusion	473
3. Gaseous Diffusion	484
4. Thermal Diffusion	498
5. Comparison of Diffusion Separation Processes	508
6. The Gas Centrifuge	510
7. Conclusions	515
Nomenclature	
References	
Problems	
Appendix A—Fundamental Physical Constants	
Appendix B—Tables of the Separation Potential	
Appendix C—Table of Mass and Energy Equivalents	
Appendix D—Properties of the Nuclides
