

CONTENTS

I. Physical Data on Ionizing Radiation	1
1. Various types of radiations—radiation sources	1
A. X- and gamma-rays	2
B. Beta-rays and high-energy electron beams	6
C. Alpha-particles and accelerated heavy ions	11
D. Neutrons	12
2. Mechanism of energy dissipation by different types of radiation	12
A. Absorption of X- and gamma-rays	12
B. Absorption of neutron radiation	16
C. Absorption of charged particles	18
3. The concept of dose—radiation units	18
A. The curie	20
B. The roentgen and derived units	20
C. New definitions	23
4. Radiation dosimetry	24
A. Absolute methods of dosimetry	24
B. Relative dosimetry	28
II. Primary Radiation-chemical Processes	37
1. Introduction	37
2. Direct interaction of radiation with matter	38
A. Ionization	38
B. Excitation	40
C. Neutron impact	41
3. Basic reactions involving active species produced in the primary act	42
A. Electron capture by neutral molecules	42
B. Ionic reactions	44
C. Reactions of excited molecules	47
D. Free radical reactions	48
E. Energy transfer processes	51
4. Chemical nature of primary fragments	55
A. Principle of non-specificity	55
B. Specific effects	56
5. Spatial distribution of primary species	57
A. "Tracks" and "spurs"	57
B. Recombination in spurs—"molecular products"	58
C. Linear energy transfer (LET)	59
D. Influence of LET on radiation-chemical yields	61
6. Radiation-chemical yields	62
A. Ionic yield M/N	62
B. The "G value"	62

III. Radiation-chemical Reactions in Hydrocarbons	66
1. Introduction	66
2. General observations	66
A. Saturated hydrocarbons	67
B. Ethylenic hydrocarbons	85
C. Acetylenic hydrocarbons	89
D. Aromatic hydrocarbons	91
E. Radiolysis of mixtures of hydrocarbons with other compounds	95
3. Analysis of mass-spectrometer data	100
A. Percentage of parent ions	100
B. Hydrogen atom abstraction	102
C. Carbon-carbon bond scissions	103
4. Mechanisms of radiation-induced condensations in hydrocarbons	106
A. Free radical processes	107
B. "Molecular" reactions	110
C. Influence of chemical structure	113
IV. General Aspects of Radiation-Initiated Polymerization	121
1. Introduction	121
2. Historical development and general observations	121
3. Mechanism of radiation polymerization	123
A. Evidence of free radical mechanisms	124
B. Evidence of ionic mechanisms in some specific systems	126
4. Kinetics of free radical polymerization	129
A. Simplified kinetic scheme	129
B. Polymerization kinetics at high rates of initiation	132
C. Polymerization in viscous systems in precipitating media	140
D. Influence of reaction temperature	149
5. Specific features of radiation-initiated polymerization	151
A. Spatial distribution of free radicals	151
B. Influence of added solvents	154
C. Initiation by polymeric radicals	154
V. Radiation Polymerization of Pure Monomers in the Homogeneous Liquid Phase	159
1. Introduction	159
2. Styrene	159
A. The bulk reaction	159
B. Influence of dose-rate	162
C. Influence of reaction temperature	166
D. The free radical yield of styrene	168
3. Methyl methacrylate	175
A. The bulk reaction	175
B. Influence of dose-rate	177
C. Influence of reaction temperature	179
D. The free radical yield of methyl methacrylate	181
E. After-effect following initiation by pulsed electrons	185

4. Vinyl acetate	188
5. Methyl acrylate	192
6. Miscellaneous monomers	197
A. Butadiene	197
B. Isoprene	198
C. α -Methylstyrene	199
D. Diacrylates and dimethacrylates	199
VI. Radiation Polymerization of Pure Monomers in Heterogeneous Phase	204
1. Introduction	204
2. Acrylonitrile	205
A. General observations	205
B. The acceleration period	206
C. Influence of dose-rate	207
D. The after-effect	209
E. The influence of reaction temperature	214
F. The free radical yield of acrylonitrile	218
3. Vinyl chloride	219
A. Polymerization in the gas phase	219
B. Polymerization in the liquid phase	221
4. Chlorotrifluoroethylene	224
5. Miscellaneous perfluorinated monomers	226
6. Isobutylene	226
7. Ethylene	230
A. Introduction	230
B. General kinetic features of the radiation polymerization of ethylene	230
C. Influence of monomer concentration	232
D. Influence of dose-rate	232
E. Influence of reaction temperature	233
F. The free radical yield of ethylene	235
8. Solid monomers	236
A. Introduction	236
B. Acrylamide	236
C. Vinyl stearate	242
D. Miscellaneous monomers	244
E. Hexamethylcyclotrisiloxane	245
VII. Radiation Polymerization of Vinyl Monomers in the Presence of Added Substances	250
1. Introduction	250
2. The "simple dilution effect" in radiation polymerization	251
A. Analysis of the basic kinetic equations	251
B. Experimental evidence of the simple dilution effect	255
3. Binary mixtures leading to energy transfer processes	265
A. Kinetics of energy transfer	266
B. Experimental evidence of energy transfer	269
C. General conclusions on energy transfer processes	283

4. Polymerization in precipitating media	285
A. Styrene solutions in alcohols	285
B. Styrene solutions in other precipitants	293
C. Methyl methacrylate solutions in methanol	296
D. Acrylonitrile solutions	297
E. Other systems	299
5. The influence of radiation dose-rate on the kinetics of solution poly- merization	301
A. Mixtures involving only the simple dilution effect	301
B. Mixtures leading to energy transfer	304
C. Polymerization in precipitating media	307
6. Ionic polymerizations in the presence of added substances	308
A. Ionic polymerization of styrene in solution	308
B. Polymerization of isobutylene in solution and in the presence of solid additives	310
C. Polymerization of butadiene and isoprene in solution	312
D. Ionic copolymerizations	312
E. Polymerization of solid styrene in the presence of additives	315
7. Aqueous solutions of vinyl monomers	317
A. Acrylonitrile solutions	317
B. Methyl methacrylate solutions	322
C. Acrylamide solutions	323
D. Methacrylic acid solutions	331
E. Vinylpyrrolidone solutions	332
8. Radiation polymerization in dispersed systems	333
A. Emulsion polymerization	333
B. Suspension polymerization	334
VIII. General Aspects of Radiation Effects in Solid Polymers	339
1. Introduction	339
2. Historical development	340
3. Changes in physical properties	341
A. Influence of the type of radiation	342
B. Resistance of polymers to radiation damage	342
C. Mechanical properties of irradiated polymers	344
D. Colour changes	347
E. Radiation-induced conductivity	348
F. Spark discharge in irradiated plastics	350
4. Chemical changes	352
A. Cross-linking and degradation	352
B. Gas evolution	357
C. Double-bond formation	359
D. Influence of oxygen	360
E. Trapped radicals	361
F. Influence of added substances	363
5. Theoretical aspects of cross-linking	364
A. The pre-gel reaction	365

B. The critical conditions for gel formation	369
C. The post-gel reaction	372
D. Properties of cross-linked polymers	377
6. Theoretical aspects of chain degradation	378
IX. Radiation Effects in Polymers of the Cross-linking Type	385
1. Introduction	385
2. Polyethylene	385
A. The structure of polyethylene	385
B. Historical background and general observations	387
C. Changes in physical properties	389
D. Chemical changes	405
E. Practical uses of radiation cross-linked polyethylene	440
3. Polypropylene and higher polyolefines	442
4. Polystyrene	446
A. Gas evolution	446
B. The <i>G</i> value of cross-linking	447
C. Main-chain scissions	450
D. The influence of oxygen	451
E. The mechanism of cross-linking	452
5. Polyisoprene and polybutadiene rubbers	452
A. Gas evolution	453
B. The <i>G</i> value of cross-linking	454
C. Change in unsaturation	458
D. The influence of additives	460
6. Polyacrylates	461
7. Poly(vinyl chloride)	464
A. Gas evolution	464
B. Discolouration	465
C. Cross-linking and degradation	467
D. Mechanism of chemical changes	471
8. Polyorganosiloxanes	473
A. Gas evolution	473
B. The <i>G</i> value of cross-linking	475
C. Properties of radiation cross-linked polyorganosiloxanes	480
9. Miscellaneous polymers	481
A. Polyamides	481
B. Polyesters	483
C. Poly(vinyl alcohol)	484
D. Poly(vinyl acetate)	486
E. Polyacrylonitrile	486
F. Polyvinylmethylether	487
G. Fluorinated elastomers	487
H. Polyelectrolytes	488
X. Radiation Effects in Polymers of the Degrading Type	495
1. Introduction	495

2. Polyisobutylene	495
A. Gas evolution	496
B. Changes in the infra-red absorption	496
C. Total unsaturation	498
D. Main-chain degradation	499
E. The mechanism of radiation degradation	503
3. Poly(methyl methacrylate)	509
A. Colour changes	509
B. Evolution of gases	513
C. Main-chain degradation	515
D. Trapped radicals	521
E. The influence of additives	524
F. Mechanisms of radiation degradation	525
G. Other methacrylate polymers	525
4. Polytetrafluoroethylene	526
A. Gas evolution	526
B. Changes in crystallinity	528
C. Main-chain degradation	529
D. Trapped radicals	531
E. Other chemical changes	532
5. Cellulose	533
A. Main-chain degradation	534
B. The after-effect	536
C. Hydrolysis of irradiated cellulose	537
D. Cellulose derivatives	537
6. Miscellaneous polymers	538
A. Poly(α -methylstyrene)	538
B. Polymethacrylonitrile	538
C. Polychlorotrifluoroethylene	539
XI. Irradiation of Polymer Solutions	542
1. Introduction—historical background	542
2. Degradation of poly(methyl methacrylate) in solution	543
A. Influence of the nature of the solvent	544
B. Influence of polymer concentration	548
C. Reaction in the presence of free radical scavengers	549
D. Effect of oxygen	555
E. Reaction in mixed solvents	556
3. Degradation of poly(methacrylic acid) in aqueous solutions	559
A. Influence of radiation dose and dose-rate	559
B. Influence of the shape of the polymer molecule in solution	561
C. Influence of oxygen on the degradation yields	561
D. Influence of "protective agents"	565
4. Degradation of polyisobutylene in solution	565
5. Degradation and cross-linking of polystyrene in solution	569
A. Irradiation of dilute solutions <i>in vacuo</i>	569
B. Oxidative degradation of polystyrene in solution	573

C. Cross-linking of polystyrene in concentrated solutions	580
6. Cross-linking of poly(vinyl chloride) in solution	585
7. Cross-linking of polyvinylpyrrolidone and poly(vinyl alcohol) in solution	588
8. Irradiation of poly(vinyl acetate) in solution	591
9. Irradiation of rubbers in solution	592
XII. Preparation of Graft Copolymers with the Aid of Ionizing Radiations	596
1. Introduction—general definitions	596
2. General aspects of radiation grafting	598
A. The different methods of radiation grafting	598
B. Radiation-chemical problems raised by grafting systems	604
C. Kinetics of graft copolymerizations	612
D. Comparison of the different methods of radiation grafting	619
3. Graft copolymers of polyethylene	620
A. Direct grafting on polyethylene	621
B. Grafting on peroxidized polyethylene	627
C. Grafting initiated by trapped radicals	647
D. Intercross-linking involving polyethylene	650
4. Graft copolymers of polypropylene	650
5. Graft copolymers of polyisobutylene	654
A. Direct grafting on polyisobutylene	654
B. Other methods of grafting on polyisobutylene	661
6. Graft copolymers of natural rubber	661
A. Direct grafting on swollen rubber	661
B. Direct grafting in emulsion	662
C. Other methods of grafting on rubber	665
7. Graft copolymers of polyacrylates and polymethacrylates	665
A. Direct grafting on polyacrylates and polymethacrylates	665
B. Grafting on peroxidized poly(methyl methacrylate)	668
C. Grafting initiated by trapped radicals	669
D. Intercross-linking involving poly(methyl methacrylate)	669
8. Graft copolymers of poly(vinyl chloride)	670
A. Direct grafting on poly(vinyl chloride)	670
B. Other methods of grafting on poly(vinyl chloride)	674
9. Graft copolymers of poly(vinyl alcohol)	674
10. Graft copolymers of polytetrafluoroethylene	676
A. Surface grafting on Teflon films	676
B. Homogeneous grafting in the depth of Teflon films	677
C. Grafting in emulsion	680
11. Miscellaneous	680
A. Graft copolymers of polystyrene	680
B. Graft copolymers of polyacrylonitrile	682
C. Graft copolymers of poly(vinyl acetate)	682
D. Graft copolymers of polyvinylpyrrolidone	682
E. Graft copolymers of polyamides	683

F. Graft copolymers of polyesters	684
G. Graft copolymers of polydimethylsiloxanes	685
H. Graft copolymers of cellulose and cellulose derivatives	686
Author Index	693
Subject Index	707
