

# CONTENTS

## Preface, **xiii**

1. Introduction, **1**
  - Biological Systems, 1*
  - Industrial Effects of Surfaces, 3*
  - Catalysis, 3*
  - Photosystems, 4*
  - Radiation as a Catalyst, 5*
  - Reactions at Colloidal Surfaces, 6*
2. Basic Principles of Excitation Processes, **9**
  - Photochemistry, 11*
  - Energy Loss with High-Energy Radiation, 14*
  - Optical Approximation, 17*
  - Spatial Location of Events, 18*
  - Summary of Radiolysis, 20*
3. Chemistry of Intermediates, **35**
  - Excited States, 35*
  - Mirror Effect on Fluorescence Lifetime, 42*
  - Electron-Transfer Reactions, 42*
  - Reactions of Ions in Unusual Valency States, 51*
  - Reactions of the Radicals, 51*
  - Reactions of Ions, 59*
  - Geminate Ion Recombination, 59*
  - Reactions of Solvated Electrons, 62*
  - Reactions of Cations, 66*
4. Experimental Techniques, **71**
  - Environment of the Photosystem, 71*
  - Picosecond Laser Flash Photolysis, 78*
  - Pulse Radiolysis, 78*
  - Form of the Kinetics, 80*
  - Stroboscopic Technique, 81*
  - Conduction, 83*
  - Fast Polarography in Pulse Radiolysis and Photolysis, 86*
  - Light Scatter, 89*
  - Electron Spin Resonance Studies, 90*

5. Colloidal Systems, **95**
  - Organic Assemblies—Micelles*, **95**
  - Micellar Shape and Size*, **98**
  - Inorganic Aggregates*, **100**
  - Solubilization in Organic Assemblies*, **103**
  - Surface Regions of Assemblies*, **107**
  - Location of Solutes in Organic Assemblies*, **109**
  - Solubilization in Inorganic Media*, **109**
  - Nuclear Magnetic Resonance Spectroscopy*, **110**
  - Carbon-13 NMR Relaxation Studies*, **113**
  - Electron Spin Resonance*, **114**
  - Light Scattering Studies*, **116**
  - Laser Raman*, **117**
  
6. Micellar Systems, **123**
  - Thermodynamic Consideration*, **123**
  - Size and Shape Considerations*, **124**
  - Aggregation Number*, **125**
  - Implications of Aggregation Number on Kinetics of Micelle Formation*
  - Thermodynamics*, **126**
  - Sample Calculation of Thermodynamic Parameters Involved in Micelle Formation*
  - Effect of Geometry on Aggregate Formation*, **129**
  - Twelve-Carbon Single Chain Anionic Surfactant*, **131**
  - Maximum Size of Emulsion Particles*, **133**
  - Conditions That Require Cosurfactants*, **133**
  - Variation of Droplet Radius with R*, **134**
  - Solubilization Aspects*, **137**
  - Counterion Kinetics* **146**
  
7. Reactions in Micellar Systems, **149**
  - Reactions of Free Radicals*, **149**
  - Reactions of Singlet Oxygen*, **157**
  - Energy Transfer*, **157**
  - Quenching of Excited States*, **161**
  - A General Picture of Micellar Reaction*, **168**
  - Charge Transfer Reactions*, **176**
  - Photoionization*, **180**
  - Electron Transfer from Excited States*, **182**
  - Electron Transfer from Excited Triplet States*, **184**

8. **Reversed Micelles, 191**
  - Some Structural Details of Reversed Micelles, 191*
  - Location of Solutes, 197*
  - Nonpolar Surfactants, 198*
  - Catalysis of Thermal Reactions, 199*
  - Fast Thermal Reactions, 200*
  - Radiation-Induced Reactions: Capture of Ions by Water Pools, 201*
  - Reactions of Excited States, 202*
  - Cationic Reversed Micelles, 206*
  - Transport of Ions in AOT Reversed Micelles, 206*
  - Electron Transfer, 208*
  - Conclusion, 209*
  
9. **Microemulsions and Liquid Crystals, 211**
  - Hexanol-Hexadecyltrimethylammonium Bromide—Water System, Oleate-Alcohol-Alkane System, 213*
  - Sites of Solubilization and Environments of Reactants, 216*
  - Location of Guest Molecules, 217*
  - Photoinduced Reactions in Microemulsion Systems, 218*
  - Quenching of Excited States, 220*
  - Quenching by  $Tl^+$  Ions, 221*
  - Oleate Microemulsion, 221*
  - Poisson Kinetics in Microemulsions, 223*
  - Photoionization in Microemulsions, 224*
  - Photoinduced Electron-Transfer Reactions, 226*
  - Effect of Structure on the Yield of Photoelectron Transfer, 226*
  - Reactions of  $P^-$  in Micelles, 228*
  - Water-in-Oil Microemulsions, 230*
  - Photoinduced Electron-Transfer Reactions, 232*
  - Photochemical Reactions, 235*
  - Exchange of Ions Between Water Pools, 236*
  - Polymerized Microemulsions, 237*
  - Liquid Crystals, 238*
  
10. **Bilayer and Monolayer Systems, 243**
  - Vesicles, 243*
  - General Properties of Bilayers, 244*
  - Effect of Surfactants on Vesicles, 249*
  - Reactions of Free Radicals with Vesicles, 250*
  - Photochemically Produced Electron Transfer, 253*
  - Monolayer Systems, 254*
  - Multipole Nature of Excited States, 258*

- 11. **Specialized Systems, 267**
  - Colloidal Silica, 267*
  - Porous Colloidal Silica, 270*
  - Colloidal Clay Systems, 271*
  - Colloidal Metals, 275*
  - Cyclodextrins, 279*
  - Macrocyclic Compounds, 280*
  - Gel Structures and Polyelectrolytes, 281*
  - Polyacrylic and Polymethylacrylic Acids, 283*
  - Polyvinyl Sulfate, 284*
  - Photochemistry in Cellulose, 285*
- 12. **Biosystems of Interest, 289**
  - Probe Studies in Proteins, 289*
  - Radiolysis of Enzymes, 301*
  - Radiolysis of Cells, 303*
