PREFACE	v
FORMULAE	xv
CHAPTER 1 SPONTANEOUS DISINTEGRATION AND RADIOACTIVE DECAY	1
1.1 First Observations of Radioactivity	1
1.2 Laws of Radioactivity—The Probability of Disintegration	3
1.3 Kinetics of Radioactive Decay Chains	8
1.4 The Natural Radioelements	17
1.5 The Artificial Radioelements	20
1.6 The Stability and Instability of Nuclei	23
References	34
Notation	34
Summary Table	36
Disintegration Schemes and Tables	39
CHAPTER 2 TYPES OF NUCLEAR DISINTEGRATION	50
2.1 Beta Disintegration—Emission of Negative Electrons	51
2.2 $\beta^+$ Disintegration and Electron Capture	54
2.3 Delayed Neutron and Proton Radioactivity	59
2.4 Theory of Beta Disintegration	62
2.5 Alpha Disintegration	69
2.6 Theory of Alpha Disintegration. Penetrating the Potential Barrier	77

2.7	Gamma De-Excitation. Energy Levels	80
2.8	Spontaneous Fission	97
	References	99
	Notation	100
<b>CHAPTER 3 FUNDAMENTALS OF NUCLEAR REACTIONS</b>		<b>102</b>
3.1	Definition of Cross-Section	103
3.2	Examination of Collisions. Nuclear Dynamics. Introduction to Centre of Mass System	109
3.3	Plane Wave Associated with a Particle. Resolution into Partial Waves	119
3.4	Coulomb Scattering, Potential Barrier. Elastic Nuclear Scattering, Potential Well	124
3.5	Different Stages of a Nuclear Reaction	131
	References	132
	Notation	133
<b>CHAPTER 4 THE COMPOUND NUCLEUS REACTION MECHANISM</b>		<b>136</b>
4.1	Compound Nuclei. Experimental Evidence	136
4.2	Cross-Section for the Formation of a Compound Nucleus	139
4.3	Excited Levels. Resonances	145
4.4	Statistical Theory for the De-Excitation of Compound Nuclei When the Level Widths Overlap. The Continuum	156
4.5	Level Density and Excitation Energies. Nuclear Temperature and Evaporation of Particles	163
4.6	Comparison of the Theories of Evaporation with Experimental Results	170
4.7	The Special Case of Photonuclear Reactions	177
	Appendix	179
	References	180
	Notation	180
<b>CHAPTER 5 HIGH-ENERGY SPALLATION REACTIONS. DIRECT INTERACTIONS FOLLOWED BY PARTICLE EVAPORATION</b>		<b>184</b>
5.1	Principal Aspects of High-Energy Reactions	184
5.2	Two-Step Mechanism. Direct Interaction and 'The Impulse Approximation'	188

5.3	Principles of the Calculation for Intranuclear Cascades due to Direct Interaction	196
5.4	De-Excitation of Nuclei Resulting from Direct-Interaction Cascades. Chain of Successive Evaporations	207
5.5	Highly Excited Nuclei with Large Angular Momenta	216
5.6	Reactions in the Region of GeV . Fragmentation	229
5.7	$\pi$ -Meson Induced Reactions	237
	References	239
	Notation	239
CHAPTER 6 DIRECT TRANSFER OF NUCLEONS OR CLUSTERS OF NUCLEONS IN NUCLEAR REACTIONS (Reactions with deuterons and heavy ions)		241
6.1	Reactions with Deuterons. Oppenheimer-Phillips Effect	242
6.2	'Stripping' and 'Pick-Up' Reactions at Medium Energies. Principle of Theoretical Calculation for Direct Interactions	245
6.3	Pick-Up Reactions at High Energies. Indirect Pick-Up. Multiple Pick-Up	248
6.4	Pure Direct Interaction: ( $p$ , $2p$ ) Reactions at High Energy	253
6.5	Transfer Reactions and Surface Interactions between Complex Nuclei	257
	References	266
	Notation	266
CHAPTER 7 NUCLEAR FISSION AT LOW ENERGIES		268
7.1	Competition between the Various De-Excitation Processes for a Heavy Compound Nucleus	269
7.2	Liquid Drop Model. Fission Barrier	271
7.3	Fission Cross-Sections at Low Energies	278
7.4	Mass Distribution of Fission Products	296
7.5	Energy of Fission Fragments	305
7.6	Neutrons and Photons Emitted by the Fragments	314
7.7	Delayed Neutrons	324
7.8	Fission Accompanied by the Emission of Alpha Particles. Tripartition	326
	References	328
	Notation	328

<b>CHAPTER 8</b>	<b>HIGH-ENERGY FISSION (Symmetric Fission)</b>	<b>331</b>
8.1	High-Energy Fission Cross-Sections and Excitation Functions	332
8.2	Fission Fragments Mass Distribution	335
8.3	Kinetic Energy Distribution of Fragments	346
8.4	Fragment De-Excitation. Fission-Spallation Competition	351
8.5	Effect of Excitation Energy and Angular Momentum on the Fission Probability of Nuclei with a Fissionability Parameter $X$ less than 0.7	361
8.6	The Angular Distribution of Fission Fragments. Angular Orbital Momenta of Fragments	366
	References	373
	Notation	374
<b>CHAPTER 9</b>	<b>EXPERIMENTAL METHODS IN NUCLEAR CHEMISTRY</b>	<b>376</b>
9.1	Particle Accelerators	376
9.2	Conditions of Irradiation. Beam Intensity Measurements. Energy Spread	393
9.3	Production and Deceleration of Neutrons. Measurements of Reaction Cross-Sections with Slow Neutrons	405
9.4	Identification and Measurement of the Characteristics of Particles Emitted in the Course of Nuclear Reactions	415
9.5	The Identification and Analysis of Particles from Nuclear Tracks in Emulsions	433
9.6	The Identification of Product Nuclei at Rest	437
9.7	The Recoil of Nuclei	449
	References	457
	Notation	458
<b>CHAPTER 10</b>	<b>APPLICATIONS OF NUCLEAR CHEMISTRY</b>	<b>461</b>
10.1	Effects of Transmutation on the Electronic Orbits and the Atomic or Molecular Environment	461
10.2	The Use of Nuclear Reactions in the Synthesis of New Elements and in Activation Analysis	470
10.3	The Application of Nuclear Fission. Energy and Nuclear Reactors	480

<b>10.4 Nuclear Reactions in the Universe (Cosmochemistry)</b>	<b>496</b>
<b>References</b>	<b>508</b>
<b>Notation</b>	<b>509</b>
<b>PROBLEMS</b>	<b>511</b>
<b>SUBJECT INDEX</b>	<b>521</b>
<b>AUTHOR INDEX</b>	<b>527</b>
