INTRODUCTION

1-1 The equilibrium state	1
1-2 The equilibrium constant	7
1-3 Forms for the equilibrium constant expression	9
1-4 Free energy and the equilibrium constant	15
1-5 Electrode potentials	19

2. MEASUREMENT OF EQUILIBRIUM CONSTANTS

2-1 Direct analysis	34
2-2 Potentiometric methods	40
2-3 Conductivity methods	43
2-4 Nonideality, temperature, and solvent effects	47
2-5 Precision and accuracy of equilibrium data	55

3. MATHEMATICAL METHODS USED IN EQUILIBRIUM CALCULATIONS

3-1 Introduction	61
3-2 Mass balances	63
3-3 Charge balances	66
3-4 Solving simultaneous equations	69
3-5 Approximations on the equations	71
3-6 Solving quadratic equations	75
3-7 Solving polynomial equations of higher degree	79
3-8 Logarithmic functions	85

4. STRONG ACIDS AND BASES

4-1 The ionization of water	90
4-2 Calculation of pH in solutions of strong acids and bases	93
4-3 Titration of strong acids and strong bases	100
4-4 Titration error	105

5. WEAK MONOPROTIC ACIDS AND BASES

5-1 Ionization of a weak acid	112
5-2 Graphical representations	120
5-3 Ionization of a weak base	128
5-4 Generalized acids and bases	134
5-5 Mixture of a strong and weak acid	138

Contents

5-6 Indicators as weak acids	141
5-7 Buffer solutions	145
5-8 Titration of a weak acid with a strong base	154
5-9 Salt of a weak acid and a weak base	164
6. PRECIPITATION AND THE SOLUBILITY PRODUCT	
6-1 Solubility of simple ionic salts in pure water	174
6-2 The common ion effect	177
6-3 Separation of compounds by precipitation	184
6-4 Precipitation titrations	185
6-5 Complications in solubility calculations	193
6-6 Solubility of salts of weak monoprotic acids	194
7. POLYPROTIC ACIDS	
7-1 Stepwise dissociation	206
7-2 Salts of polyprotic acids	215
7-3 Titration of a polyprotic acid with a strong base	221
7-4 Mixture of two weak monoprotic acids	226
7-5 Poly-amines and amino acids	231
7-6 Multiple buffer systems	238
7-7 Solubility of salts of polyprotic acids	249
8. INTRODUCTION TO COMPLEX FORMATION EQUILIBRIA	
8-1 Stepwise formation of complexes in solution.	261
8-2 Effect of complex formation on solubility of pure salts	274
8-3 Hydrolysis of metal ions	285
8-4 Dissolving a precipitate in a complexing agent	292
8-5 Competition between two ligands	296
8-6 Ammine complexes	303
8-7 Solubility of sulfides	310
9. THE MATHEMATICAL FORMS OF STABILITY EQUILIBRIA	
9-1 Definitions	321
9-2 The shape of the distribution curve	324
9-3 The shape of the formation curve.	327
9-4 Alignment charts	335
10. COMPLEX FORMATION: ADVANCED TOPICS	
10-1 Cation versus anion as ligand	347
10-2 Mixed ligand complexes	352
10-3 Homonuclear acid systems	359
10-4 Polynuclear hydroxide complexes	364
10-5 Chelates.	373
10-6 Complexometric titrations	385

11. OXIDATION-REDUCTION EQUILIBRIA	
11-1 Introduction	394
11-2 Graphical representations.	399
11-3 Effect of complex formation on oxidation-reduction equilibria	408
11-4 Oxidation-reduction titrations	414
12. NONIDEALITY CORRECTIONS	
12-1 Ionic interactions	429
12-2 Theoretical forms for the activity coefficient	431
12-3 Equilibrium calculations using activity coefficients	440
12-4 The pH scale and its extensions	450
APPENDIX I. Tables	459
APPENDIX II. Answers	475
TABLE OF INTERNATIONAL ATOMIC WEIGHTS	526
TABLE OF COMMON LOGARITHMS	528
INDEX	531
