

CONTENTS

| | |
|---|-----|
| Preface | xi |
| 1. Living and dormant polymers: a critical review | 1 |
| 2. Current status of anionic polymerization | 17 |
| 3. Synthesis of controlled polymer structures | 41 |
| 4. Synthesis of model macromolecules of various types via anionic polymerization | 59 |
| 5. Relationship of anion pair structure to stereospecificity of polymerization | 71 |
| 6. Some aspects of ion pair-ligand interactions | 79 |
| 7. The influence of aromatic ethers on the association of the polystyryllithium and 1,1-diphenylmethylithium active centers in benzene | 95 |
| 8. The photoisomerization of allylic carbanions | 107 |
| 9. Solvation of alkylithium compounds: steric effects on heats of interaction of tetrahydrofurans with polyisoprenyllithium and polystyryllithium | 117 |
| 10. Anionic polymerization of the strontium salt of one-ended living polystyrene in tetrahydrofuran and tetrahydropyran | 127 |
| 11. Dynamics of ionic processes in low polar media | 153 |
| 12. NMR characterization of ion pair structure | 177 |
| 13. Polymerization of methyl methacrylate initiated by <i>t</i> -butyl- and phenylmagnesium compounds: factors influencing the nature of the active centers | 185 |
| 14. Anionic polymerization of ϵ -caprolactone for block copolymer synthesis | 199 |
| 15. Original anionic pathway to new PA(PO) ₂ star-shaped block polymers based on polyvinyl or polydiene hydrocarbons and polyoxirane | 211 |
| 16. Ion pair structure and stereochemistry in anionic oligomerization and polymerization of some vinyl monomers | 231 |
| 17. Living anionic stereospecific polymerization of 2-vinylpyridine | 239 |
| 18. Kinetics and mechanism of anionic polymerization of lactones | 271 |
| 19. Use of cryptates in anionic polymerization of heterocyclic compounds | 283 |
| 20. Anionic polymerization of acrolein. Kinetic study and the possibility of block polymer synthesis: mechanisms of initiation and propagation reactions | 307 |
| 21. Studies on the anionic polymerization of methyl methacrylate initiated with butyllithium in toluene by using perdeuterated monomer | 327 |
| 22. Synthesis of copolymers using ionic techniques | 343 |
| 23. Anionic polymerization of triphenylmethyl methacrylate | 353 |
| 24. C-13 NMR study of the propagating live end in the butyllithium polymerization of 1,3-butadiene | 367 |
| 25. Anionic polymerization: some commercial applications | 389 |
| 26. Industrial applications of anionic polymerization: past, present, and future | 409 |

| | |
|---|-----|
| 27. Functionally terminal polymers via anionic methods | 427 |
| 28. Present view of the anionic polymerization of methyl methacrylate and related esters in polar solvents | 441 |
| 29. Anionic polymerization of isoprene by the complexes oligoiso-prenyllithium/tertiary polyamines in cyclohexane. I. Kinetic study | 463 |
| 30. Preparation of polymeric free-radical initiators by anionic synthesis: polymeric azo derivatives | 477 |
| 31. Coupling reactions of carbanionic polymers by elemental compounds such as oxygen and sulfur | 483 |
| 32. Cyclic sulfonium zwitterions: novel anionic initiators for the control of cyclooligomerization of isoxyanates | 501 |
| 33. Anionic polymerization. VII. polymerization and copolymerization with lithium – nitrogen – bonded initiator | 513 |
| 34. Anionic copolymerization of butadiene and isoprene with organolithium initiators in hexane | 529 |
| 35. The reactivity of polydiene anions with divinylbenzene | 557 |
| Index | 581 |
