Studies in Surface Science and Catalysis (other volumes in the series)	XVII
Preface	XIX
List of Contributors	XVIII

PART I: KINETICS AND MECHANISM OF HYDROGENATION AND HYDROGENOLYTIC REACTIONS

Chapter 1: Some problems of chemical kinetics in heterogeneous hydrogenation catalysis (S.L. Kiperman)	
1.1 Introduction	
1.2 Specific kinetic aspects of catalyzed hydrogenation reactions	
1.3 Mechanism and kinetics of hydrogenation. General concepts	
1.4 Kinetic models of hydrogenation in the gas phase	10
1.4.1 Hydrogenation of olefins	10
1.4.2 Hydrogenation of diene hydrocarbons	14
1.4.3 Hydrogenation of acetylene compounds	15
1.4.4 Hydrogenolysis of aliphatic and alicyclic hydrocarbons	16
1.4.5 Hydrogenation of aromatic compounds	18
1.4.6 Hydrogenation of oxygen- and nitrogen-containing compounds	23
1.4.7 Interaction of heterocyclic compounds with hydrogen	28
1.5 Kinetic behaviour of liquid-phase hydrogenation	31
1.6 Hydrogenation in systems containing several unsaturated compounds	35
1.7 Selectivity of hydrogenation	38
1.8 Conclusion	43
References	45
Chapter 2: Synergy in catalytic reactions involving hydrogen: possible role of surface-mobile species (B.K. Hodnett and B. Delmon)	
2.1 Introduction	53
2.2 Literature survey of synergistic effects in catalytic reactions involving hydrogen	
2.2.1 Hydrogenation on catalysts composed of noble metals (Pt and Pd) and inorganic oxides (SiO ₂ and Al ₂ O ₃)	56
2.2.2 Hydrogenation and hydrodesulphuration over sulphide catalysts	58
2.2.3 Coke formation on reforming catalysts	59
2.3 Possible origins of synergy in reactions involving hydrogen	59
2.3.1 Classical bifunctional catalysis	59
2.3.2 Formation of compounds between two phases	60

2.3.3 Contamination of the surface of one phase by elements from the other phase	61
2.3.4 Reaction of spill-over hydrogen produced on one phase with a reactant adsorbed on another phase	62
2.3.5 Creation or regeneration of catalytic centres on one phase by spill-over hydrogen emitted by the other phase: the "remote control" concept	65
2.4 Special discussion of mechanisms involving surface-mobile species: possible outlook; control of selectivity	67
2.4.1 Extent of formation of spill-over hydrogen on SiO_2 and Al_2O_3	68
2.4.2 Factors influencing spill-over: possible mechanisms	69
2.4.3 Creation and regeneration of surface sites by spill-over hydrogen	70
2.4.4 The role of surface-mobile species in determining selectivity	74
2.5 Conclusions	76
References	76
Chapter 3: Adsorption and hydrogenation of carbonyl and related compounds on transition metal catalysts (K. Tanaka)	
3.1 Introduction	79
3.2 Comparison with olefin hydrogenation	80
3.2.1 Complexity in carbonyl compound hydrogenation	80
3.2.2 Equilibrium positions	80
3.2.3 Reaction pathways	81
3.3 Deuterium tracer studies	83
3.3.1 Aliphatic ketones and aldehydes	83
3.3.2 Alicyclic ketones	85
3.3.3 Aromatic ketones	89
3.4 Stereochemistry of alicyclic ketone hydrogenation	90
3.5 Kinetics, substituent effects and related subjects	91
3.5.1 Kinetic studies	91
3.5.2 Substituent effects, competitive reactions	92
3.6 Characterization of adsorbed species	94
3.6.1 IR spectroscopy	94
3.6.2 Thermal desorption	98
3.6.3 Ultraviolet photoelectron spectroscopy	99
3.6.4 Extrapolation from UHV-low temperature conditions	99
3.7 Conclusions	100
References	101

Chapter 4: Hydrogenation of nitriles (J. Volf and J. Pašek)	105
4.1 Introduction	105
4.2 Reaction scheme in the formation of primary, secondary and tertiary amines	106
4.3 Catalysts for hydrogenation of nitriles	111
4.4 Properties of the main types of catalysts for hydrogenation of nitriles	114
4.4.1 Nickel and cobalt catalysts	114
4.4.2 Copper catalysts	119
4.4.3 Catalysts from the platinum group metals	121
4.5 Effect of nitrile structure on hydrogenation	125
4.6 Effect of reaction conditions on hydrogenation of nitriles	128
4.6.1 Temperature	128
4.6.2 Hydrogen pressure	130
4.6.3 Ammonia	132
4.6.4 Water	135
4.7 Conclusion	140
References	141
Chapter 5: Hydrogenolysis of C-C bonds on platinum-based bimetallic catalysts (F. Garin, L. Hilaire and G. Maire)	145
5.1 Introduction	145
5.2 General properties of bimetallic catalysts	146
5.2.1 Geometric and electronic factors	146
5.2.2 The rigid band model	146
5.2.3 The geometric effect	147
5.2.4 The electronic factor (ligand effect)	148
5.2.5 Synergistic effects	148
5.2.6 Surface segregation	149
5.2.7 Small particles	149
5.3 Hydrogenolysis reactions	150
5.3.1 Thermodynamic and kinetic data	150
5.3.2 Mechanisms of hydrogenolysis reactions on platinum catalysts	154
5.3.3 Hydrogenolysis of C-C bonds on alloys and bimetallic systems	157
Concluding remarks	194
References	195

Chapter 6: Hydrogenative denitrogenation of model compounds as related to the refining of liquid fuels (H. Schulz, M. Schon and N.M. Rahman)	201
6.1 Organic nitrogen compounds in tars, oils from coal, shale and petroleum	201
6.2 Evaluation of catalyst selectivity for HDS, HDO and HDN reactions and hydrogenation of multiple bonds	204
6.2.1 Conversion of a four compound model mixture	205
6.2.2 Evaluation of specific HDS activity	207
6.2.3 Evaluation of specific HDO activity	209
6.2.4 Evaluation of specific HDN activity	210
6.2.5 Concluding evaluation of specific catalyst activity	212
6.2.6 Variation of the compounds of the mixture	213
6.2.7 Variation of the partial pressure of one of the compounds of the model mixture	213
6.3 Simultaneously proceeding hydrogenation reactions during refining of oils from "Sumpffphase" coal hydrogenation	216
6.4 Reaction steps in denitrogenation	218
6.4.1 Nitrogen in aliphatic amines	218
6.4.2 Nitrogen in amino groups attached to aromatic rings: aniline and homologues	222
6.4.3 Nitrogen in aromatic six-membered heterocycles: pyridine, quinoline, isoquinoline, acridine	225
6.4.4 Nitrogen in aromatic five-membered heterocycles: pyrrole, indole, carbazole	239
6.4.5 Nitrogen in saturated monocyclic five- and six-membered rings: pyrrolidine and piperidine	244
6.5 Generalization for fast and slow steps in HDN reaction networks	246
Appendix	252
References	253
Chapter 7: Effect of catalyst composition on reaction networks in hydrodesulphurization (M. Zdražil and M. Kraus)	257
7.1 Introduction	257
7.2 The chemistry of hydrodesulphurization	257
7.3 Kinetic consequences	259
7.4 Effects of structure, temperature and hydrogen pressure	262
7.5 Synergic effects on the distribution of intermediates	262
7.5.1 Non-aromatic cyclic sulphur compounds	262
7.5.2 Unsaturated hydrocarbons	269
7.6 Synergic effects on individual reactions	272
7.7 Conclusions	273
References	275

PART II: HETEROGENEOUS HYDROGENATION CATALYSTS. NEW ASPECTS

Chapter 8: Carrier effect on hydrogenation properties of metals (G.M. Pajonk and S.J. Teichner)	277
8.1 Introduction	277
8.2 Some previous data	278
8.3 Recent views on the metal-support effects	283
8.4 Hydrogenation of carbon oxides	284
8.4.1 Nickel-based catalysts	284
8.4.2 Platinum-based catalysts	289
8.4.3 Palladium-based catalysts	290
8.4.4 Ruthenium-based catalysts	291
8.4.5 Rhodium-based catalysts	292
8.4.6 Cobalt-based catalysts	293
8.4.7 Iron-based catalysts	293
8.4.8 Molybdenum-based catalysts	295
✓8.5 Hydrogenation of benzene and other aromatics	<u>295</u>
8.5.1 Metals supported on TiO ₂ catalysts	296
8.5.2 Metals supported on other inorganic supports	297
8.5.3 Metals supported on organic carriers	299
8.6 Hydrogenation of mono- and diolefins	299
8.7 Miscellaneous hydrogenations	301
8.7.1 Organic reactants	301
8.7.2 Inorganic reactants	304
8.8 Influence of the metal-support interaction on the deactivation of supported catalysts	305
8.9 Conclusions	307
References	307
Chapter 9: Role of bimetallic catalysts in catalytic hydrogenation and hydrogenolysis (L. Guzzi and Z. Schay)	313
9.1 Introduction	313
9.2 Ensemble size effect and surface segregation	315
9.2.1 Ni-Cu alloys	315
9.2.2 Pt-Au alloys	318
9.2.3 Ru-Cu alloys	319
9.2.4 Pt-Pd alloys	320
9.3 Ensemble size effect accompanied by secondary effects	322
9.3.1 Matrix effect	322
9.3.2 Hydrogen effect	325
9.3.3 Metal-support interaction and segregation	330

9.4 Conclusions	333
References . . .	333
Chapter 10: Supported mono- and bimetallic catalysts in hydrocarbon conversions (J. Völter)	
10.1 Introduction	337
10.2 Preparation and structure	338
10.2.1 Monometallic systems (Pt/Al ₂ O ₃)	338
10.2.2 Bimetallic systems	
10.2.3 Further bimetallic systems of Pt, Pd, Rh and Ni	348 ✓
10.3 Catalysis with bimetallic systems	349
10.3.1 Hydrogenation	
10.3.2 Dehydrogenation	
10.3.3 Dehydrocyclization (reforming)	
10.3.4 Dehydroisomerization	
10.3.5 Hydrogenolysis	353
10.4 Coking	353
10.4.1 Initial coking	353
10.4.2 Long-term coking	353
10.5 General discussion	
10.5.1 Preparation and structure	357
10.5.2 Classification of reactions	358
10.5.3 Bimetal effect in selective conversions	360
10.5.4 Bimetal effect in non-selective conversions	362
10.6 Conclusions	367
10.6.1 Preparation and structure	367
10.6.2 Coking	367
10.6.3 Catalysis	367
References	
Chapter 11: Supported bimetallic catalysts prepared by controlled surface reactions (J. Margitfalvi, S. Szábó and F. Nagy)	
11.1 Introduction	373
11.2 The mode of control of surface reactions involved in the preparation of supported bimetallic catalysts	374
11.2.1 General aspects	374
11.2.2 Preparation via anchored ionic surface complexes	375
11.2.3 The use of bimetallic complexes or clusters	376
11.3 New approaches	376
11.3.1 Electrochemical approach	376
11.3.2 Organometallic approach	379

11.4	Preparation of supported bimetallic catalysts via metal adsorption	380
11.4.1	Technical aspects of the preparation	380
11.4.2	Preparation of bimetallic Pd-Pt/Al ₂ O ₃ catalysts	381
11.4.3	Preparation of Pt/Al ₂ O ₃ catalysts modified by adsorbed Re and Sn	381
11.5	Preparation of supported bimetallic catalysts by using organometallic compounds	
11.5.1	The experimental technique and procedures used	385
11.5.2	Preparation of supported Sn-Pt catalysts	386
11.5.3	Preparation of lead-modified alumina-supported nickel catalysts	390
11.6	Catalytic properties of supported bimetallic catalysts prepared via controlled surface reactions	
11.6.1	General aspects	391
11.6.2	Benzene hydrogenation	392
11.6.3	n-Hexane conversion	393
11.6.4	Hydrogenation of acrylonitrile	405
11.7	Conclusions	407
	References	407

Chapter 12:	New supported metallic nickel systems (J.M. Marinas, J.M. Campelo and D. Luna)	411 ✓
12.1	Introduction	411
12.2	Preparation and characterization of nickel catalysts	412
12.2.1	Introduction	412
12.2.2	New preparation methods	412
12.2.3	New materials	414
12.3	Metal-support interaction	434 ✓
12.4	Catalyzed reactions	440
12.5	Poisoning and deactivation	442
12.6	Promoting effects	447
12.7	Conclusions	450
	References	450

PART ADVANCES IN HOMOGENEOUS HYDROGENATION

Chapter 13: Supported metal complexes as hydrogenation catalysts (Yu.I. Yermakov and L.N. Arzamaskova)	459
13.1 Introduction	459
13.1.1 General information on catalysts prepared by anchoring of metal complexes	459
13.1.2 The stability of anchored metal complexes	465
13.2 Hydrogenation of unsaturated hydrocarbons in the presence of anchored metal complexes	466
13.2.1 The problem	466
13.2.2 Parameters influencing the accessibility of active centers	467
13.2.3 Substrate activation in the coordination sphere of anchored palladium complexes	472
13.2.4 Some conclusions	478
13.3 Hydrogenation of unsaturated hydrocarbons in the presence of transition metal ions on non-functionalized oxides	479
13.3.1 Catalysts prepared from anchored π -allyl complexes of Group 6 metals	479
13.3.2 Catalysts prepared from anchored complexes of Group 4 metals	480
13.3.3 Catalysts prepared from anchored organometallic complexes of actinides	481
13.4 Anchored organometallic complexes as precursors for the preparation of highly dispersed metallic particles	481
13.4.1 Preparation of metallic catalysts by decomposition of surface organometallic complexes	482
13.4.2 Low-valent surface ions as anchoring sites for stabilization of dispersed metals and the problem of the strong metal-support interaction	483
13.4.3 The preparation of metallic catalysts by decomposition of anchored metal carbonyls	484
13.4.4 Some conclusions	486
13.5 Conclusion	487
References	487
Chapter 14: Supported asymmetric hydrogenation catalysts (J. Hetflejš)	497
14.1 Introduction	497
14.2 Polymer-supported asymmetric hydrogenation catalysts	498
14.3 Asymmetric hydrogenation catalysts anchored to inorganic supports	509
14.4 Concluding remarks	512
References	512

PART IV: CATALYTIC HYDROGENATION REACTORS AND TECHNOLOGIES

Chapter 15: Liquid-phase hydrogenation: the role of mass and heat transfer in slurry reactors (G. Gut, O.M. Kut, F. Yucelen and D. Wagner) . . .	517
15.1 Introduction	517
15.2 Overall model	517
15.2.1 Surface reaction	518
15.2.2 Poisoning and inhibition	521
15.3 Mass transfer and kinetics	523
15.3.1 Transport of hydrogen	523
15.3.2 Transport of substrate	524
15.3.3 Estimation of the absorption coefficient of hydrogen . . .	525
15.3.4 Estimation of the transfer coefficient to the catalyst . .	527
15.3.5 Checking for effects of mass transfer on the kinetics . .	530
15.3.6 Pore diffusion	530
15.4 Examples of application and simulation	531
15.4.1 Batch reactor: effects of hydrogen and substrate transfer	531
15.4.2 Continuous stirred tank slurry reactor: basic concept . .	533
15.4.3 CSTR: combination of mass transfer with chemical reaction	534
15.4.4 CSTR: simulation of conversion profiles	535
15.4.5 Batch reactor: effects of the rates of heat production and heat transfer	537
15.4.6 Batch reactor: effects of film and pore diffusion	538
15.5 Notation	542
References	544
Chapter 16: Application of fixed-bed reactors to liquid-phase hydrogenation (J. Hanika and V. Staněk)	547
16.1 Introduction	547
16.2 Literature survey	548
16.3 Parameters affecting the productivity of multi-phase fixed-bed reactors	548
16.4 Mass and heat transfer in three-phase fixed-bed reactors	549
16.5 Structural properties of fixed catalytic beds	550
16.6 Mathematical modelling in the design and operation of trickle-bed reactors	552
16.7 Hydrogenation of cyclohexene in a trickle-bed reactor	557
16.7.1 Experimental set-ups and reaction conditions	558
16.7.2 Steady-state operation of the trickle-bed reactor	559
16.7.3 Dynamic behaviour of the trickle-bed reactor	566
16.7.4 Hysteresis properties of trickle-bed reactors	569

18.4 C ₄ cut hydrorefining	635
18.4.1 Hydrorefining of the C ₄ butadiene-rich cut (selective hydrogenation of vinylacetylene)	636
18.4.2 Hydrorefining of 1-butene-rich cuts (selective hydrogenation of butadiene)	643
18.4.3 Hydroisomerization of 1-butene cuts	648
18.5 Gasoline cut hydrorefining	652
18.5.1 Characteristics of steam-cracked gasolines and specifica- tions of hydrogenated products	652
18.5.2 Refining by selective hydrogenation	653
18.5.3 Processes	656
18.5.4 Industrial performance	659
18.6 Conclusion	665
References	665
Subject Index	667
