

# Contents

1. Units, Conventions, and General Methods Employed in the Determination of Oxidation-Reduction Potentials.....	1
Energy units. Temperature. $E^\circ$ values. Hydrogen reference couple. Conventions regarding sign. Addition or subtraction of half-reaction potentials. Potentials from galvanic cells: Cells without liquid junctions. Cells with liquid junctions. Potential values from free energies and equilibrium constants. Potential values from thermal data. Estimation of potential values from chemical evidence.	
2. Ionization Potentials, Electron Affinities, Lattice Energies, and Their Relation to Standard Oxidation-Reduction Potentials.....	14
Ionization potentials. Electron affinities. Reactions at 25° C. Lattice energies. Hydration energies. Absolute electrode potentials. Absolute hydration energies. Factors which determine the magnitude of oxidation-reduction potentials. Proton affinities. Acidic and basic oxides.	
3. Hydrogen.....	29
Oxidation states. The $H_2-H^+$ couple. The second ionization constant of water. The hydride-hydrogen ion couple. The $D_2-D^+$ couple.	
4. Oxygen.....	38
Oxidation states. The water-oxygen couple. The water-oxygen atom couple. The peroxide-oxygen couple. The water-peroxide couple. The free energy of solid peroxides. The water, oxygen-ozone couple. Couples involving perhydroxyl. Couples involving hydroxyl.	
5. The Halogens.....	51
Fluorine: The fluoride-fluorine couple. The fluorine-oxide potential. Chlorine: Oxidation states. The chloride-chlorine couple. The chloride-hypochlorite couple. The chloride-chlorite couple. The	

chloride-chlorine dioxide couple. The chloride-chlorate couple. The chloride-perchlorate couple. Perchlorate radical. Additional chlorine half-reactions. Notes on the chlorine potentials. Bromine: Oxidation states. The bromide-bromine couple. The bromide-hypobromite couple. The bromide-bromate couple. Bromine chloride as an oxidizing agent. Additional bromine half-reactions. Notes on the bromine potentials. Iodine: Oxidation states. The iodide-iodine couple. The iodide-triiodide couple. The iodide-hypoiodite couple. Iodine monochloride. Iodine monobromide. Iodine trichloride. The iodide-iodate couple. Periodic acid. Additional iodine half-reactions. Notes on the iodine couples. Notes on the potentials of the halogen group.

## 6. Sulfur, Selenium, Tellurium, and Polonium . . . . . 70

Sulfur: Oxidation states. The sulfide-sulfur couple. The polysulfides. The sulfur-sulfurous acid couple. The sulfite-sulfate couple. Thio-sulfate and tetrathionate. Sulfoxylic acid. Hyposulfurous acid. The thionic acids. Peroxydisulfate. Sulfur-halogen compounds. Reduction of sulfur compounds in steps. Selenium: Oxidation states. The selenide-selenium couple. The selenium-selenite couple. Selenite-selenate couple. Selenium halogen compounds. Tellurium: Oxidation states. The telluride-tellurium couple. The tellurium-tellurous acid couple. The tellurous acid-telluric acid couple. Halogen compounds of tellurium. Polonium: Oxidation states. Polonium couples. Summary of Group VI potentials.

## 7. Nitrogen, Phosphorus, Arsenic, Antimony, and Bismuth . . . . . 90

Nitrogen: Oxidation states. Free energies from thermal data. Equilibria involving  $\text{HNO}_3$ ,  $\text{HNO}_2$ ,  $\text{N}_2\text{O}_4$ ,  $\text{NO}_2$ , and  $\text{NO}$ . The reduction of nitric acid. The nitrite-nitrate couple. The reduction of nitrous acid. The hydroxylamine-ammonium couple. The reduction of nitrous acid with sulfite. The oxidation and reduction of hydrazine. Nitrite to ammonia in alkaline solution. The reduction of nitric and nitrous oxides. Hydrazoic acid. Nitrosyl chloride and nitrosyl bromide. Summary of nitrogen potentials. Phosphorus: Oxidation states. The free energies of phosphorus compounds. The phosphorus-phosphoric acid couple. Hypophosphoric acid. Hypophosphorous acid. Phosphine and other hydrogen phosphides. Phosphorus halogen compounds. Summary of phosphorus potentials. Arsenic: Oxidation states. Arsine. The arsenic-arsenious acid couple. The arsenious acid-arsenic acid couple. Arsenic sulfides. Arsenic trichloride. Summary of arsenic potentials. Antimony: Oxidation states. The stibine-antimony couple. The antimony-antimonous acid couple. The antimonous-antimonic acid couple. Antimony tetroxide. Antimony trichloride. The antimony sulfides. Summary of antimony potentials.

Bismuth: Oxidation states. Bismuth hydrogen compounds. The bismuth-bismuthyl couple. Bismuth trichloride and oxychloride. Bismuth monoxide. Bismuth tetroxide and pentoxide. Trends in the Group V potentials.

## 8. Carbon, Silicon, Germanium, Tin, and Lead . . . . .

Carbon: Oxidation states. The free energy of carbon compounds. The oxidation of hydrocarbons. Electrolytic reduction of acids, aldehydes, and alcohols. Electrolytic oxidation of alcohols, aldehydes, and acids. Peroxycarbonate. Carbon as an oxidizing agent. Unsaturated hydrocarbons. Aniline-nitrobenzene. Cyanide, cyanate, and cyanogen. Thiocyanate. Hydroquinone-quinone couples. Diphenylbenzidine and derivatives. Indophenols. Methylene blue. Indigo. Erioglaucine. A. Nitroguanidine. Xanthines. Flavines, murexides, and porphyrin. Safranin. Free energies of  $\text{CS}_2$ ,  $\text{COS}$ ,  $\text{COCl}_2$ ,  $\text{CCl}_4$ , and  $\text{CO}(\text{NH}_2)_2$ . Silicon: Oxidation states. The free energies of some silicon compounds. Oxidation and reduction of silicon. Equilibria involving the silicon halides. Germanium: Oxidation states. Germanium potentials. Tin: Oxidation states. Tin-stannous potentials. Stannous-stannic potentials. Lead: Oxidation states. Lead-plumbous and lead-plumbite couples. Plumbous halides. Additional lead-plumbous couples. Plumbous-plumbic couples. The lead storage battery.

## 9. Gallium, Indium, and Thallium . . . . .

Gallium: Oxidation states. The gallium-gallic ion couple. Gallous chloride. The +1 oxide. Indium: Oxidation states. The indium-indic ion couple. The +1 and +2 oxidation states. The thallium-thallic couple. The thallic-thallic couple. Summary of Group 3' potentials.

## 10. Zinc, Cadmium, and Mercury . . . . .

Zinc: Oxidation states. The zinc-zinc ion couple. Cadmium: Oxidation states. The cadmium-cadmium ion couple. Cadmium in the +1 state. Mercury: Oxidation states. The mercury-mercurous ion couple. The mercury-mercurous halide couples. Additional mercury-mercurous salt couples. The mercurous-mercuric couple. The mercury-mercuric oxide couple. The mercury-mercuric sulfide couple. The mercuric cyanide and halide complex ions. Additional mercuric couples. Summary of the Subgroup II potentials.

## 11. Copper, Silver, and Gold . . . . .

Copper: Oxidation states. The copper-cuprous couple. The copper-cuprous oxide couple. The copper-cuprous halide couples. The copper-cuprous cyanide and thiocyanate couples. Copper-cuprous sulfide

- and other cuprous couples. The copper-cupric ion couple. The copper-cupric oxide or hydroxide couple. The copper-cupric sulfide couple. Other copper-cupric couples. Various cuprous-cupric couples. Copper in the +3 state. Silver: Oxidation states. The silver-silver ion couple. The silver-silver oxide couple. The silver halide and cyanide couples. The complex silver, ammonia, sulfite, and thiosulfate ions. The silver-silver sulfide couple. Additional silver-silver salt potentials. Silver in the +2 and +3 oxidation states. Gold: Oxidation states. Gold-auric couples. The gold-aurous couples. Gold in the +2 oxidation state. Summary of Subgroup I potentials.
12. Nickel, Palladium and Platinum . . . . . 198
- Nickel: Oxidation states. The nickel-nickelous couple. The nickel-nickel hydroxide couple. Complex nickelous ions. Nickel carbonate and sulfide. Nickelic oxide. Higher oxidation states of nickel. Palladium: Oxidation states. Palladium-palladous couples. Palladium in the +4 and +6 oxidation states. Platinum: Oxidation states. Platinum-platinous couples. Platinum in the +3 state. Platinous-platinic couples. Perplatinate. Summary of the group potentials.
13. Cobalt, Rhodium, and Iridium . . . . .
- Cobalt: Oxidation states. Cobalt-cobaltous couples. Cobalt-cobaltic couples. Cobalt dioxide. Rhodium: Oxidation states. The free energies of some rhodium compounds. Rhodium in the +4 and +6 states. Iridium: Oxidation states. The free energy of a number of iridium compounds. The +3-+4 couples. Iridium in the +6 state. Summary of group potentials.
14. Iron, Ruthenium, and Osmium . . . . .
- Iron: Oxidation states. Iron-ferrous couples. Ferrous-ferric couples. Iron in the +4 and +6 states. Ruthenium: Oxidation states. Ruthenium potentials. Osmium: Oxidation states. The free energy of osmium tetroxide. Potentials of other osmium couples.
15. Manganese, Technetium, and Rhenium . . . . .
- Manganese: Oxidation states. Manganous ion and its compounds. Manganic potentials. Complex manganese cyanides. Manganese dioxide, manganate, and permanganate. Manganese dioxide electrode in dry cells. Summary of manganous potentials. Rhenium: Oxidation states. Rhenium potentials. Summary of rhenium potentials.
16. Chromium, Molybdenum, and Tungsten . . . . . 245
- Chromium: Oxidation states. The free energy of chromic ion. Chromic hydroxide. Chromous ion. Chromate and dichromate. Chromyl

chloride. Molybdenum: Oxidation states. The free energy of molybdate and molybdic acid. The reduction of molybdic acid to the +5 and +3 states. Molybdenum cyanides. Molybdenum dioxide. Molybdenum peroxide. Tungsten: Oxidation states. Free energies of the oxides. The free energy of tungstate. The reduction of tungstate in hydrochloric acid.

## 17. Vanadium, Niobium, and Tantalum 258

Vanadium: Oxidation states. Vanadic acid and the vanadates. The vanadyl-pervanadyl couple. The  $V^{+++}$ - $VO^{++}$  and  $V^{++}$ - $V^{+++}$  couples. The free energy of the vanadium oxides. The metal- $V^{++}$  couple. Vanadium peroxyacids. Niobium: Oxidation states. Niobium oxide. Niobium potentials. Tantalum: Oxidation states. Tantalic acid and fluoride. Tantalum potentials. Summary of group potentials.

## 18. Titanium, Zirconium and Hafnium 266

Titanium: Oxidation states. Titanium dioxide. The  $Ti^{+3}$ - $TiO^{++}$  couple. The  $Ti^{++}$ - $Ti^{+3}$  couple. The  $Ti$ - $Ti^{++}$  potential. Fluotitanate. Summary of titanium potentials. Zirconium: Oxidation states. The free energy of zirconium dioxide. Hafnium: Oxidation states. The free energy of hafnium oxide.

## 19. Boron, Aluminum, Scandium, and Yttrium 296

Boron: Oxidation states. Boric acids and their salts. Boron potentials. Heteroboric acids. Aluminum: Oxidation states. Aluminum potentials. Scandium: Oxidation states. Scandium potentials. Yttrium: Oxidation states. Yttrium potentials.

## 20. Lanthanum and Rare Earth Elements. The Lanthanide Series 296

Oxidation states. Tables of thermodynamic data. Properties of the +3 states. The dioxides. Properties of the +2 ions.

## 21. The Actinide Elements 296

Actinium. Thorium: Oxidation states. Thermodynamic data. Free energies and potentials. Protactinium. Uranium: Oxidation states. Free energies and potentials. Thermodynamic data. Neptunium: Oxidation states. Free energies and potentials. Thermodynamic data. Potential diagrams. Plutonium: Oxidation states. Free energies and potentials. Potential diagrams. Americium: Oxidation states. Free energies and potentials. Summary of americium potentials. Curium. Berkelium.

**22. Beryllium, Magnesium, Calcium, Strontium, Barium, and Radium**.....

Beryllium: Oxidation states. Beryllium free energies. Magnesium: Oxidation states. Free energy of  $Mg^{++}$  and its compounds. The free energy of  $Mg^+$ . Calcium: Oxidation states. Calcium free energies. Calcium in the +1 state. Strontium: Oxidation states. Strontium free energies. Barium: Oxidation states. Barium free energies. Radium: Summary of group potentials.

**23. Lithium, Sodium, Potassium, Rubidium, Cesium, and Francium**.....

Oxidation states. The metal-metal ion potentials. Free energies of solution of alkali salts. Trends in the solubilities of the alkali compounds.

**APPENDICES**

1. Summary of Oxidation-Reduction Potentials.....	339
2. The Activity of Strong Electrolytes.....	349
3. The Estimation of Entropy Values.....	359
