

# Contents

<b>Foreword to English Edition</b>	<i>page</i> vii
------------------------------------	-----------------

## **Part 1 Atomic Structure**

1. The structure of extranuclear electrons	17
2. The Aufbau principle	20
3. The shape of orbitals	7
4. $\psi$ -functions	10

## **Part 2 The Nature of the Chemical Bond**

1. Ionic compounds	17
2. Ionic size and ionic lattices	20
3. Formation of molecules and complexes by ionic interaction	27
4. The hydrogen molecule. Covalent bonding	35
5. Valency states and valency electrons	36
6. Heteropolar covalent bonds	38
7. The water and ammonia molecules. Polyatomic ions	40
8. The methane molecule. Hybridization	43
9. The ethylene molecule. Multiple bonds	47
10. The benzene molecule. Delocalized bonds	50
11. Structural formulae with valency bonds	53
12. Mesomerism. Canonical structures and conventional formulae	56
13. Multiple bonds	60
14. Stereochemistry	63
15. The metallic bond	64
16. Intermetallic compounds	69
17. Interactions between molecules. Dipole and dispersion forces. Ion-dipole bonding	72

**CONTENTS**

18. Chemical bonding and reactivity	page 78
19. Chemical bonding and mechanical strength	89
20. Metallic conduction	93
21. Chemical bonding and colour	96
<b>Bibliography</b>	105
<b>Index</b>	107
