

CONTENTS

Glossary of Symbols and Abbreviations xi

chapter 1 The Beginnings of Quantum Theory 1

- 1-1 Introduction 1
- 1-2 The Nature of Light 2
- 1-3 The Dual Nature of Matter 7
- Exercises 8
- References 8

chapter 2 The Bohr Atom 9

- 2-1 Introduction 9
- 2-2 Occurrence of Line Spectra 10
- 2-3 Structure of the Hydrogen Atom 11
- 2-4 Other Atoms 15
- Exercises 16
- References 16

chapter 3 Wave Mechanics and Atoms 17

- 3-1 Introduction 17
- 3-2 The Schrödinger Equation and the Hydrogen Atom 17
- 3-3 Many-electron Atoms 25

3-4*	Atoms and Ions of the First Transition Series	31
	Exercises	34
	References	35

chapter 4 Molecules and the Covalent Chemical Bond 37

4-1	Introduction: Molecular Orbital Formation	37
4-2	General Properties of Molecular Orbitals	40
4-3	Application to the Nitrogen Molecule	43
4-4	Some Simple Heteronuclear Molecules	45
4-5	Bond Polarity and Electric Dipole Moments	47
4-6	Need for the Concept of Hybridization	51
4-7	A Summary of Hybridization Rules	58
4-8	The Neon Molecular Isoelectronic Series	60
4-9	Other Simple Molecules	62
4-10	Delocalized π Molecular Orbitals	66
4-11*	A More Detailed Treatment of Molecular Orbitals in Diatomic Molecules	70
4-12*	Hybrids Involving d Orbitals	75
4-13*	Rare-gas and Interhalogen Compounds	76
	Exercises	82
	References	84

chapter 5 Ionic, Metallic, and van der Waals Bonding 87

5-1	Ionic Bonding; Stabilization of Ions in Crystals	87
5-2	Size of Ions	92
5-3	Trends in Ionic Radii	93
5-4	Radius Ratio and Packing of Ions in Crystals	94
5-5	Ionic Potential and Partial Covalency	96
5-6	Metallic Bonding; Introduction	97
5-7	Band Theory of Metals	97
5-8	Conductors, Semiconductors, and Insulators	100
5-9	The Nature of van der Waals Forces	103
5-10	The Nature of the Hydrogen Bond	107

Summary of Bond Types 111
Exercises 111
References 113

Structure of Transition-metal Compounds 115

6-1 Introduction 115
6-2 Color 116
6-3 Magnetic Properties 118
6-4 Fundamentals of Crystal Field Theory 121
6-5 Explanation and Use of Absorption Spectra 125
6-6* Nonoctahedral Systems 127
6-7 Systems with More than One *d* Electron;
Strong and Weak Crystal Fields 128
6-8 Factors Influencing Field Strength 131
6-9 Explanation of the Strange Double-humped
Curves 132
6-10* The Spinel Crystal Structures 134
6-11* Distortion and the Jahn-Teller Theorem 135
6-12* Effects of Covalence 136
Exercises 140
References 142

A Units of Energy and Conversion Factors 143

B Values of Some Physical Constants 145

The Periodic Table 147

**Answers or Hints for Solution of
Selected Exercises 149**
