

**CONTENTS****NUCLEOPHILIC SUBSTITUTION REACTION MECHANISMS**

1. Substitution Reactions of Chelates	3
2. Pressure Effects and Substitution Mechanisms	39
3. Proton-Transfer Reaction Rates and Mechanisms	63
4. Nucleophilic Substitution	81

**ELECTRON-TRANSFER REACTION MECHANISMS**

5. Electron Transfer in Weakly Interacting Systems	105
6. Optical Charge-Transfer Transitions	137
7. Observations on Atom-Transfer Reactions	151
8. Some Comparisons Between the Energetics of Electrochemical and Homogeneous Electron-Transfer Reactions	181
9. Four Aspects of the Distance Dependence of Electron-Transfer Rates	213
10. Further Developments in Electron Transfer	235
11. Mechanistic Studies of Electron Exchange Kinetics Using Ab Initio Electronic Structure Techniques	255
12. Inclusion of Solvent Effects in a Vibronic Coupling Model for Mixed-Valence Compounds	281
13. Parameters of Electron-Transfer Kinetics	301
14. Effect of Organized Assemblies on Chemical Reactions	335
15. Generation of Reactive Intermediates via Photolysis of Transition-Metal Polyhydride Complexes	347
16. One-Electron Reduction Product of Tris(2,2'-bipyridine)-rhodium (III)	385
17. Proton-Transfer Reactions in Organometallic Chemistry	403
18. Reactivity of Coordinated Dioxygen	425

**OVERVIEW**

19. Inorganic Reaction Mechanisms-Past, Present, and Future	453
Index	467
