

TABLE OF CONTENTS

Preface	1
Theoretical Part	
CHAPTER I	
Some functions characterizing stepwise complex formation in solution	5
Literature cited	14
CHAPTER II	
Experimental methods of determining instability constants	15
Group I methods	15
A. Methods based on a study of heterogeneous equilibria	18
1. Solubility method	18
2. Distribution method	30
3. Ion exchange method	32
B. Electrometric methods of determining instability constants	34
1. Potentiometric method	34
2. Polarographic method	42
C. Other methods of the first group	45
1. Kinetic method	45
2. "Freezing" method	46
3. Colorimetric indicator method	47
4. Biological method	49
5. Radioactive tracer method	49
Group II methods	50
1. Spectrophotometric method	50
2. Electroconductivity method	56
3. Cryoscopic and calorimetric methods	57
Literature cited	60
CHAPTER III	
Complete thermodynamic characteristics of complex formation in solution	63

CHAPTER IV

Factors determining the stability of complex compounds

in solution	71
Literature cited	88

Tables of Instability Constants of Complex Compounds

Explanation of tables	91
1. Arrangement of material	91
2. Contents and abbreviations used	92
3. List of addends	95
I. Complexes with inorganic addends	99
Complexes with ammonia	99
Bromide complexes	102
Bromate complexes	105
Complexes with hydrazine	105
Hydroxo complexes	106
Hydroperoxo complexes	109
Iodate complexes	109
Iodide complexes	110
Perchlorate complexes	111
Nitrate complexes	113
Selenocyanate complexes	114
Pyrophosphate complexes	115
Thiocyanate complexes	116
Sulfate complexes	120
Sulfite complexes	123
Tetrametaphosphate complexes	124
Thiourea complexes	125
Thiosulfate complexes	126
Trimetaphosphate complexes	128
Phosphate complexes	129
Fluoride complexes	130
Chlorate complexes	132
Chloride complexes	133
Cyanide complexes	138
II. Complexes with organic addends	140
1. Complexes with amines	140
Complexes with dipyridyl	140

Complexes with diethylenetriamine	141
Complexes with imidazole	142
Complexes with pyridine	143
Complexes with propylenediamine	144
Complexes with 1,2,3-triaminopropane	145
Complexes with methylamine	145
Complexes with triaminotriethylamine	146
Complexes with trimethylenediamine	146
Complexes with triethylenetetramine	147
Complexes with phenanthroline	148
Complexes with ethylenediamine	149
2. Complexes with anions of organic acids	151
Acetate complexes	151
Malate complexes	153
Glycolate complexes	154
Glycerate complexes	154
Complexes with gluconic acid	155
Complexes with kojic acid	156
Lactate complexes	157
Malonate complexes	158
Complexes with butyric acid	159
Nitroacetate complexes	159
Oxalate complexes	160
Complexes with oxaloacetic acid	162
Salicylate complexes	163
Succinate complexes	164
Tartrate complexes	165
Complexes with propionic acid	166
o-Phthalate complexes	167
Citrate complexes	168
3. Complexes with amino acids	170
Complexes with alanine	170
Complexes with aminobarbituric, N,N-diacetic acid . .	171
Complexes with asparagine	172
Complexes with N-hydroxyethylethylenediaminotri- acetic acid	172
Complexes with aspartic acid	173
Complexes with β -hydroxyethyliminodiacetic acid . . .	174

Complexes with glycylglycine	175
Complexes with glycine	176
Complexes with N,N-dihydroxyethylglycine	177
Complexes with 1,2-diaminocyclohexanetetraacetic acid	178
Complexes with iminodipropionic acid	179
Complexes with iminodiacetic acid	179
Complexes with iminopropionoacetic acid	180
Complexes with nitrilodiacetopropionic acid	180
Complexes with nitrilodipropionoacetic acid	181
Complexes with nitrilotripropionic acid	181
Complexes with nitrilotriacetic acid	182
Complexes with 2-sulfonoanilinediacetic acid	184
Complexes with trimethyldiaminetetraacetic acid	184
Complexes with ethylenediaminetetraacetic acid	185
4. Complexes with diketones and aldehydes	187
Complexes with acetylacetone	187
Complexes with β -methyltropolone	190
Complexes with sulfosalicylaldehyde	191
Complexes with thenoyltrifluoroacetone	191
Complexes with tropolone	192
Complexes with salicylaldehyde	193
Complexes with α -isopropyltropolone	194
Complexes with β -isopropyltropolone	195
Complexes with α -methyltropolone	196
5. Complexes with other organic addends	197
Complexes with <i>o</i> -aminophenol	197
Complexes with 8-hydroxy-2,4-dimethylquinazoline	197
Complexes with 8-hydroxy-4-methyl-2-phenylquin- azoline	198
Complexes with 8-hydroxy-5-methylquinoline	198
Complexes with 8-hydroxy-2-methylquinoline	199
Complexes with 8-hydroxy-6-methylquinoline	200
Complexes with 8-hydroxy-7-methylquinoline	200
Complexes with 8-hydroxy-4-methylcinnoline	201
Complexes with 8-hydroxyquinazoline	201
Complexes with 5-hydroxyquinoxaline	202
Complexes with 8-hydroxycinnoline	202

Complexes with 8-hydroxyquinoline	203
Complexes with eriochrome blue-black B	205
Complexes with eriochrome blue-black R	205
Complexes with eriochrome black A	206
Complexes with eriochrome black T	206
Tables of Complete Thermodynamic Characteristics of Complex Formation Reactions in Solution	
Explanation of tables	209
Complete thermodynamic characteristics of complex formation reactions in solution	211
